South Carolina Department of Health and Environmental Control  
Division of Ocean and Coastal Resource Management

General Coastal Zone Consistency Certification  
Bureau of Air Quality  
Minor New Source Review Permits

Recipient: Regulated Public – State of South Carolina

GCZC Number: GCZC-2013-001

Date of Issuance: December 3, 2013

Expiration Date: December 3, 2018

Authorized Work: Minor New Source Review Construction Permits and associated Operating Permits

The Minor New Source Review construction permit is applicable to construction projects where potential air emissions are less than major source thresholds as defined by law. The permits contain requirements for compliance with State and Federal air quality regulations. Once construction has been completed, a request for an Operating Permit (new, modified, or renewed) is submitted to the Bureau of Air Quality.

Location: The eight Coastal Zone counties of South Carolina - Beaufort, Berkeley, Charleston, Colleton, Dorchester, Georgetown, Horry, and Jasper.

The intent of a General Coastal Zone Consistency Certification (GCZC) is to provide a means by which certain activities that have minimal impacts can be authorized with minimal delay. The activities covered by this General Certification have been determined to be consistent with South Carolina's Coastal Zone Management Program (SCCZMP) after a thorough review of the policies, guidelines, and Geographic Areas of Particular Concern (GAPC) priority of uses of the SCCZMP. Furthermore, the Stormwater Management Guidelines of the SCCZMP may also be applicable at the time of NPDES permit submittal (and associated CZC review) for land disturbance activities if impacts rise above the minimum thresholds specified in the 2013 NPDES General Permit for Stormwater Discharges from Construction Activities.

In reviewing this GCZC for consistency with the SCCZMP, staff determined the referenced policies listed below allow for minor impacts without further review:

Policies applicable in the review of the activity for consistency:

- II. Transportation Facilities (*Ports*)
- III. Coastal Industries (*Manufacturing*)
- IV. Commercial Development
- IX. Public Services and facilities (*Solid Waste Disposal, Public Buildings, Dams and Reservoirs*)
- XI. Energy and Energy Related Facilities
- XII. Activities in Areas of Special Resource Significance (*Barrier Islands, Dune Areas, Navigational Channels, Public Open Spaces, and Wetlands*)

Policies not applicable in the review of the activity for consistency:

- I. Residential Development
- II. Transportation Facilities (*Roads and Highways, Airports, Railways, and Parking Facilities*)
- III. Coastal Industries (*Agriculture, Forestry, Mining, Fish and Seafood Processing, and Aquaculture*)
- V. Recreation and Tourism (*Parks and Commercial Recreation*)
- VI. Marine Related Facilities (*Marinas, Boat Ramps and Docks*)
- VII. Wildlife and Fisheries Management (*Artificial Reefs and Impoundments*)
- VIII. Dredging (*Dredging and Spoil Disposal*)
- IX. Public Services and facilities (*Sewage Treatment and Water Supply*)
- X. Erosion Control (*Funding and General Erosion Control*)
- XIII. Stormwater Management (*Runoff, Bridge Runoff, Golf Course Management, Mines, and Landfills*)
- XIV. Beach and Shoreline Access

This GCZC is issued under the provisions of Act 123 of the 1977 South Carolina General Assembly and the SCCZMP of the Department of Health and Environmental Control Ocean and Coastal Resource Management Division. This GCZC serves as the final staff coastal zone consistency certification associated with the activities covered under the Bureau of Air Quality Minor New Source Review Construction Permitting Program (and subsequent associated operating permits) unless DHEC staff determines that an individual certification will be required, or unless otherwise specified.

For more information regarding the Bureau of Air Quality's Minor New Source Review program, please visit [www.scdhec.gov/environment/baq/Permitting/](http://www.scdhec.gov/environment/baq/Permitting/).

Please carefully read the authorized work described above and all conditions which appear on this certification as they affect the activities allowed.

Conditions for Minor New Source Review Permits and associated Operating Permits

1. The Division of OCRM must be notified in writing of coverage claimed under this GCZC prior to the construction phase. The communication should include a description of the work including the area impacted and the location.
2. An individual certification will be required if the scope of the associated Operating Permit exceeds the scope of the Construction Permit.
3. This GCZC does not relieve the applicant from the requirement of obtaining all other necessary approvals prior to initiating work.
4. The applicant must implement proper best management practices during activities covered by this general certification, as appropriate.
5. Facilities qualified for a Minor New Source Review construction permit (and associated operating permit) that would result in the filling or other permanent alteration of Waters of the State, including wetlands, are not covered by this general certification, unless feasible alternatives are considered such that these resources are avoided to the maximum extent practicable and resultant impacts are minimized. A maximum non-jurisdictional wetland impact of .10 acres is allowed under this provision without the requirement of mitigation. Impacts to wetlands over this maximum threshold will require an individual certification. To the extent feasible, structures must be directed away from ecologically sensitive areas such as marshes, forested wetlands, pocosins, etc.
6. The Bureau of Air Quality's regulatory programs in issuing these permits will ensure air quality standards are met and adhered to as required by law. However, the following conditions are specific to coastal resources and also must be adhered to:
  - a. None of the proposed activity is located in areas identified as "Areas of Special Resource Significance" as detailed in Chapter III, Section XII of the SCCZMP, as refined. Areas of Special Resource Significance include: (1) Barrier Islands, (2) Dune Areas (outside of the critical area), (3) Navigation Channels, (4) Public Open Spaces, and (5) Wetlands (except for those impacts to wetlands that qualify under condition #5) are not covered by this general certification. Barrier Islands identified in this condition include undeveloped areas of barrier islands only. Public Open Spaces identified in this condition include recreationally open areas such as local parks. State Parks are currently identified as Geographic Areas of Particular Concern (GAPC) and are covered therein. CZC Staff will determine effects to these at the time of review
  - b. None of the proposed activity is located in areas identified as GAPCs as detailed in Chapter IV of the SCCZMP; Areas of Unique Natural Resource Value: (1) Heritage

Trust Sites, (2) State Wildlife Preserves, (3) State Parks, (4) Scenic Rivers, (5) Marine and Estuarine Sanctuaries, (6) Shellfish Areas, (7) Groundwater Resources, and (8) Threatened and Endangered Species; Activities or Facilities Dependent on Coastal Location: (1) State Ports, (2) Navigation Channels, and (3) Mining Operations; Areas of Special Historic, Archaeological or Cultural Significance: (1) special historic, (2) archaeological, or (3) culturally significant sites. CZC Staff will determine affects to GAPC's at the time of review.

**AN APPLICANT UTILIZING THIS GCZC HEREBY AGREES TO ABIDE BY THE TERMS AND CONDITIONS OF THE GCZC AND TO PERFORM THE WORK IN STRICT ACCORDANCE WITH THE PLANS AND SPECIFICATIONS AS APPROVED BY THE AGENCY PERMITTING AUTHORITY. ANY DEVIATION FROM THESE CONDITIONS AND TERMS OF THIS GCZC OR THE PLANS AND SPECIFICATIONS OF THE PERMIT AS ISSUED SHALL BE GROUNDS FOR REVOCATION, SUSPENSION, OR MODIFICATION OF THIS GCZC AND THE INITIATION OF SUCH LEGAL PROCEEDINGS AS THE DHEC MAY CONSIDER APPROPRIATE.**
