Re: Bid # IBF-30519-8/8/06-EMW; PO # 646282
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct Aggressive Fluid Vapor Recovery (AFVR) event at several facilities. The packets contain the necessary approval for work to begin. You may commence with a site reconnaissance before the AFVR. If monitoring wells do not contain measurable free phase product, contact the UST project manager for further instructions. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 646282 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

UST Permit#	Facility	County	Release #	Work Scope	Due Date*	CA #	Approved Amt
06742	Country Side 2	Oconee	1	8 AFVR	60 days	30052	8,950.00

*From receipt of letter

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained.

If for any reason there are changes in these cost agreements, any associated changes to this cost agreement must be pre-approved by this Department in order for Midlands Environmental Consultants to seek future cost compensation. Please contact the site's project manager for technical and/or financial approval.

UST PROGRAM
TRACKING # 3

Any item(s) not clearly or completely addressed in the report (disposal manifest for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.

The Department grants pre-approval for transportation of free phase product and petroleum contaminated groundwater from the referenced site to a permitted treatment facility. The free product and contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the report.

If you have any questions concerning this correspondence or need further assistance, please contact me by phone at (803) 896-6664, by fax at (803) 896-6245 or by email at milenkmp@dhec.sc.gov.

MEMORANDUM

DATE: August 2, 2007

TO: Cindy Brady, Manager
Financial Section

FROM: Joel P. Padgett, P.G.
Southwestern SC Corrective Action Section
Assessment and Corrective Action Division

SUBJECT: Country Side 2
UST Permit #06742
Oconee County

In accordance with small purchase procurement procedures, three price quotes have been obtained for installation of a water supply line at the Charles Dockins residence, 355 Charis Drive, Westminster. One solicitor, Burrell's Plumbing, submitted a no-bid statement. The two remaining solicitors, Dean's Plumbing and Crook's Plumbing and Electrical, Inc., submitted nearly identical bids. Accordingly, the solicitors were contacted for more details. Per a telephone conversation with Dean Riseley of Dean's Plumbing on August 1, 2007, the bid amount of $4940.00 does not include the required tap fee. Per a telephone conversation with David Crooks of Crook's Plumbing and Electrical, Inc., the bid amount of $4986.66 does include the required tap fee. Accordingly, it is recommended that the price quotation from Crook's Plumbing and Electrical, Inc. be accepted and that a purchase order be generated in the amount of $4986.66.

We hereby submit specifications and estimates for:

Trunch in 685' to 700' of 1" PVC sch 40 water piping at a depth of 2'+ w/ tracer wire. 3/4" P.R. Valve w/ union, 3/4" ball valve at meter, + one hose bibb w/ vacuum breaker at house, + one tap fee

Total cost of job $4,986.66

per 8/2/07 telephone conversation with David Crooks, ECP
fee included in bid 8/2/07

We Propose hereby to furnish material and labor — complete in accordance with above specifications, for the sum of:
four thousand nine hundred eighty-six + 66/100 - dollars ($ 4,986.66).
Payment to be made as follows:

All material is guaranteed to be as specified. All work to be completed in a workmanlike manner according to standard practices. Any alteration or deviation from above specifications involving extra costs will be executed only upon written orders, and will become an extra charge over and above the estimate. All agreements contingent upon strikes, accidents or delays beyond our control. Owner to carry fire, tornado and other necessary insurance. Our workers are fully covered by Workman's Compensation Insurance.

Authorized Signature B. Gilmore

Note: This proposal may be withdrawn by us if not accepted within 30 days.

Acceptance of Proposal — The above prices, specifications and conditions are satisfactory and are hereby accepted. You are authorized to do the work as specified. Payment will be made as outlined above.

- ☐ AGRICULTURAL FOR : ☐ CROPS ☐ POULTRY ☐ DAIRY ☐ CATTLE/SWINE/EQUINE ☐ OTHER
- ☐ LAWN IRRIGATION/ SPRINKLER SYSTEM
- ☐ OTHER _____(EXPLAIN)

For Office Use Only _____

The member shall install and maintain at his own expense a service line, equipped with a **pressure regulating valve with an inlet pressure rating of at least 300 psi.** beginning at his property line and extending to his dwelling or facility to be served. Owners of all sprinkler systems are required to submit to Pioneer Water annual certification of backflow prevention devices by a SC DHEC approved technician.

The Member's service line shall connect with the distribution system of the District at the nearest place of desired use by the Member, provided that the District has determined in advance that the water system is of sufficient capacity to permit delivery of water at that point.

The member shall pay for water at such rates, times and place as shall be determined by the Board of Directors of the District. **Only one dwelling or facility shall be served through one meter.** Meters connected at time of installation will be charged for actual usage according to the prevailing rates as established by the Board of Directors. If meter will not be connected at time of tap installation, it is the customer's responsibility to notify Pioneer Water.

The Member agrees that he will make no physical connection between any private water system and the water system to the District. The District may make inspections to enforce these provisions. Violation shall be grounds for disconnection of the service.

The District shall purchase and install a cut-off valve and may also include a water meter in each service. Such a cut-off valve and meter shall be installed within three (3) feet of the distribution system. The District shall have exclusive right to use such cut-off valve and water meter and to turn it on and off. **The District may refuse service to any Member who tampers with a meter or other measuring device. Failure to provide unobstructed access to meter will result in estimated bills until access is provided.**

The District shall have final jurisdiction in any question of location of any service line connection to its distribution system, shall determine the allocation of water to members in the event of a water shortage, may shut off the water to a Member who allows a connection or extension to be made to his service line for the purpose of supplying water to another user.

The failure of a Member to pay water charges duly imposed shall result in the following penalties.

A. Non-payment within fifteen days from the due date will result in the water being shut off from the member's property.

B. Non-payment for sixty days after original due date will allow the District, in addition to all other rights and remedies, to cancel the member's Membership Certificate and terminate his membership, and in such event the member shall not be entitled to receive, nor the District obligated to supply, any way under this agreement.

Membership may be canceled and/or service discontinued by the District for any violation of any rule, regulation, or condition of service and especially for any of the following reasons:

1. Misrepresentation in application as to the property or facilities to be supplied or use to be made of this service.

2. Tampering with main lines or valves or permitting such tampering by others.

3. Connections, or cross-connections, from the Member's service line to facilities not covered by this agreement.

IN WITNESS WHEREOF, we have hereunto executed this agreement this _____day of _____, 200__.

Re: Notice to proceed- Water supply line installation
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; Cost Agreement #30268
Price quote for public water supply installation received June 22, 2007
Oconee County

Dear Mr. Anderson:

The Underground Storage Tank (UST) Program has reviewed the referenced solicitation submitted by Crook's Plumbing and Electrical, Inc. The Program accepts your price quotation for water supply line installation at the Charles Dockins residence, 355 Charis Road, Westminster.

Cost Agreement (CA) #30268 has been approved in the amount of $4,986.66 and will be kept on file for payment from the SUPERB Account. Accordingly, Crook's Plumbing may proceed with the water supply line installation upon receipt of this correspondence.

SCDHEC reserves the authority to pay only for work properly performed and/or technically justified. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable, and the right to audit project records at any time during the project or after completion of the work.

Please reference CA #30268 on the invoice and supporting documentation submitted for the work. A completed W-9 form will be necessary to process your invoice for payment. The form has been enclosed for your convenience. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason there is a change in the proposed scope of work, the change must be pre-approved by the Department in order for Crook's Plumbing to seek additional payment from SUPERB.

On all correspondence concerning this site, please reference UST Permit #06742. If there are any questions concerning this correspondence, please feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6145, or by e-mail at padgetjp@dhec.sc.gov.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320B

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on August 10, 2007. The event was conducted on monitoring well MW-4R to remove free phase petroleum product and on wells MW-1, MW-R4R and MW-51 to reduce CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring well MW-4R at a thickness of 0.01 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring wells MW-1, MW-R4R and MW-51 prior to the AFVR event The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 5.45 pounds or approximately 0.94 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.68 pounds per hour. Concentrations of off gas produced during the event were recorded from 206 parts per million by volume (PPM) to 796 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 13.0 to 14.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1B.

UST PROGRAM
DOCKETING # 6

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2B. Monitoring well locations are depicted on attached Figure 1.

A total of 45 gallons of liquid was removed from MW-1, MW-4R, MW-R4R and MW-51 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320A

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

A site visit was conducted on January 30, 2007 to gauge and locate monitoring wells. MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on August 10, 2007. The event was conducted on monitoring well MW-54 to remove free phase petroleum product and on MW-7R, MW-8 to reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring well MW-54 at a thickness of 0.02. feet prior to the AFVR event. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 6.54 pounds or approximately 1.13 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.82 pounds per hour. Concentrations of off gas produced during the event were recorded from 371 parts per million by volume (PPM) to 583 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 11.0 to 14.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1A.

UST PROGRAM
DOCKETING # 7

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2A. Monitoring well locations are depicted on attached Figure 1.

A total of 55 gallons of liquid was removed from MW-7R, MW-8, and MW-54 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on September 13, 2007. The event was conducted on monitoring well MWR-4 to remove free phase petroleum product and on wells MWR-4R and MW-51 to reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring well MWR-4 at a thickness of 0.01 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring wells MWR-4R and MW-51 prior to the AFVR event The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 2.10 pounds or approximately 0.36 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.26 pounds per hour. Concentrations of off gas produced during the event were recorded from 135 parts per million by volume (PPM) to 194 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 13.0 to 14.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1D.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320C

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on September 13, 2007. The event was conducted on monitoring wells MW-1R, MW-8, and MW-54 to remove free phase petroleum product and on well MW-7 to reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring well MW-1R at a thickness of 1.83 feet, in MW-8 at a thickness of 0.02 feet, and in MW-54 at a thickness of 0.08 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-7 prior to the AFVR event The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 3.68 pounds or approximately 0.64 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.46 pounds per hour. Concentrations of off gas produced during the event were recorded from 162 parts per million by volume (PPM) to 267 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 11.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1C.

UST PROGRAM
DOCKETING # 9

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2C. Monitoring well locations are depicted on attached Figure 1.

A total of 60 gallons of liquid was removed from MW-1R, MW-8, MW-7 and MW-54 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

1.0 PROJECT INFORMATION

The subject site (Country Side 2) is located at 8050 West Oak Highway in Westminster, Oconee County, South Carolina (see Figure 1). The site is currently a gasoline service station. On-site surface covering is predominately asphalt. The site is bordered by rural residential properties, wooded areas, and a property which occupies an elevated water tower.

The subject site previously maintained five underground storage tanks (UST's) including: 1-550 gallon kerosene UST, 1-550 gallon diesel UST, 1-550 gallon gasoline UST, and 2-1,000 gallon gasoline UST's. A release of petroleum product was reported January 11, 1993 and confirmed January 20, 1993. These UST's were abandoned by removal from the ground in June of 1990. Currently, the subject site maintains five UST's including: 1-10,000 gallon kerosene UST, 1-10,000 gallon diesel UST, 2-6,000 gallon gasoline UST's, and 1-8,000 gallon gasoline UST.

The above information is based on reports and correspondence obtained from SCDHEC files.

2.0 FIELD EXPLORATION

Field exploration conducted at the site included:

- field screening and laboratory analysis of groundwater samples collected from the site utilizing direct push techniques;
- construction and sampling of permanent monitoring wells; and
- sampling of one nearby surface water body.

The monitoring well locations were selected based on the results of our field screening of groundwater samples, existing site conditions, estimated groundwater flow direction, and drilling accessibility. The screening points are illustrated on Figure 7.

Following installation, the wells were surveyed by Construction Support Services of Columbia, SC (PLS # 14811).

2.1 DIRECT PUSH FIELD SCREENING

From February 8 through April 13, 2007 one hundred and twenty seven direct push borings (GPW-1 through GPW-127) were advanced at the site to collect groundwater samples. Each direct push

sample was collected through disposable Teflon tubing and placed in a laboratory-supplied container for analysis. The borings were advanced by Geologic Exploration, Inc. of Statesville, North Carolina (S.C. Driller Certification: Johnny Burr # 1740 and Brian Thomas # 1465). The sampling depth for each of the locations were based on the water table depth, the yield of the water bearing zone as evidenced by flow of water into the direct push apparatus, and the ability to reach the desired depth below ground surface (BGS). These samples were taken to determine horizontal and vertical extent of the contaminant plume. The total footage for the direct push groundwater borings was 3,877 feet. The sample locations are presented on Figure 7 and analytical results are presented in Table 4. To prevent cross-contamination between borings, the reusable down-hole portion of the direct push sampling device was cleaned between borings. New Teflon tubing was utilized at each location. Following the collection of the groundwater sample, the hole left open by the direct push apparatus was filled with a bentonite/portland grout slurry.

The groundwater samples obtained by MECI personnel were sent to Pace Analytical of Charlotte, NC for laboratory analysis. Selected samples were tested for the presence of BTEX, Naphthalene and MTBE by EPA Method 8260B.

2.2 MONITORING WELL INSTALLATION

From March 17, 2007 to May 4, 2007 twenty watertable bracketing single cased monitoring wells, two single cased monitoring wells with submerged screens, seventeen double cased monitoring wells, and three cased rock monitoring wells were installed at the subject site. These wells were installed by Geologic Exploration, of Statesville, North Carolina (S.C. Driller Certification: Jason Mantak # 1494, Brian Thomas # 1465, and Mark Gettys # 1086). The single cased monitoring wells were installed using both a truck-mounted employing 8-inch outer diameter hollow-stem augers and an ATV-mounted drilling rig employing 5.5 solid flight augers to construct the borehole. Monitoring wells MW-14R2, MW-15R, MW-23 through 25, MW-29, MW-32, MW-38, MW-43, MW-46, MW-47, MW-49 through MW-55, MW-58, and MW-59 were installed as single cased, water-table bracketing monitoring wells and utilizing screens ranging from ten feet to twenty feet. Monitoring wells MW-44i and MW-57i were installed as single cased monitoring wells with submerged screens. These monitoring wells were installed to auger refusal to monitor the contaminant plume at the rock interface. Monitoring wells MW-17i, MW-19i, MW-21i, MW-26i, MW-30i, MW-33i, MW-35i, MW-39i, and MW-41i were installed as double cased intermediate monitoring wells. These wells utilize five foot screens. During construction, a 6-inch outer casing was advanced to the desired

depth and grouted in-place. The grout was allowed to cure overnight and the remainder of the depth of the borehole was advanced using mud-rotary techniques. Double cased monitoring wells MW-18D, MW-20D, MW-22D, MW-31D, MW-34D, MW-36D, MW-40D and MW-42D were installed to top of rock. Monitoring wells MW-16DD, MW-28DD, and MW-37DD were installed as double cased monitoring wells advanced into rock. During construction, a 6.25-inch outer casing was advanced to the desired depth and grouted in place. The grout was allowed to cure overnight and the remainder of the depth of the borehole was advanced using air rotary techniques. For each of these wells, air-rotary drilling techniques were utilized to advance the borehole until the first water bearing fracture was encountered.

During installation of the rock monitoring wells, fluids produced during the drilling were required to be contained. Drilling fluids produced by the air drilling were not able to be contained by standard techniques. To protect a nearby surface water, a vacuum truck was required to aid in containment of these fluids prior to reaching the surface water.

Drill cuttings were containerized and later transported to Waste Management/Richland Landfill, Elgin, SC and Waste Management/Palmetto Landfill, Wellford, SC by MECI personnel. A total of 33.85 tons was disposed of in this manner. A disposal manifest for these soils is attached at the end of this report.

Following completion of the monitoring wells, the wells were developed by bailing at least three well volumes or until they were determined to be functioning properly and turbidity was reduced. The development water was drummed and treated onsite utilizing a Portable Granular Activated Carbon Unit. Test Boring Records showing soil descriptions are included in Appendix A. Monitoring well installation details are also provided in Appendix A. A total of nine (9) drums of purge/development water were created during the development of monitoring wells. These drums were treated on-site using a Portable Granular Activated Carbon Unit. Disposal manifests for the drummed purge water is attached at the end of this report.

2.3 MONITORING WELL SAMPLING AND CHEMICAL ANALYSES

On May 7 and May 8, 2007, monitoring wells MWR-1A, MWR-2, MWR-3, MW-4, MW-5 through MW-7, MW-7R, MW-9R, MW-11, MW-12, MW-13R, MW-14R, MW-14R2, MW-15R, MW-17i, MW-16DD, MW-18D, MW-19i, MW-20D, MW-21i, MW-22D, MW-23 through MW-25, MW-26i,

MW-28DD, MW-29, MW-30i, MW-31D, MW-32, MW-33i, MW-34D, MW-35i, MW-36D, MW-37DD, MW-38, MW-39i, MW-40D, MW-41i, MW-42D, MW-43, MW-44i, MW-46, MW-47, MW-49, MW-50 through MW-55, MW-57i, MW-58, and MW-59 were purged and sampled. These wells were purged by bailing at least three well volumes of water from each well or until all available water had been evacuated, whichever occurred first. Monitoring wells MWR-1, MWR-4R, MWR-4, and MW-8 were not sampled due to the presence of measurable free phase petroleum product. Free phase petroleum product was detected at a thickness of 1.25 feet in MWR-1, 0.58 feet in MWR-4R, 0.29 feet in MWR-4, and 0.44 feet in MW-8. Field measurements of pH, conductivity, temperature and dissolved oxygen were obtained before, during and after the well purging process. Field measurements of dissolved carbon dioxide were obtained before well purging. Table 1 presents the results of the field measurements obtained. The groundwater samples obtained were sent to Pace Analytical Services, Inc. of Charlotte, NC (SCDHEC Laboratory Certification #99006) for analysis. Stabilized depth to water measurements were obtained on May 8, 2007.

On March 30, 2007, samples were collected form monitoring wells MW-16DD, MW-28DD and MW-37DD. These samples were collected to determine petroleum impact into the rock aquifer. This data was used in determining if additional monitoring wells were required to define contamination in the rock aquifer. These samples were sent to Pace Analytical Services, Inc. of Charlotte, NC (SCDHEC Laboratory Certification #99006) for analysis by EPA Method 8260B.

Groundwater samples (May 7 and 8, 2007) from monitoring wells MWR-1A, MWR-2, MWR-3, MW-4, MW-5 through MW-7, MW-7R, MW-9R, MW-11, MW-12, MW-13R, MW-14R, MW-14R2, MW-15R, MW-16DD, MW-17i, MW-18D, MW-19i, MW-20D, MW-21i, MW-22D, MW-23 through MW-25, MW-26i, MW-28DD, MW-29, MW-30i, MW-31D, MW-32, MW-33i, MW-34D, MW-35i, MW-36D, MW-37DD, MW-38, MW-39i, MW-40D, MW-41i, MW-42D, MW-43, MW-44i, MW-46, MW-47, MW-49, MW-50 through MW-55, MW-57i, MW-58, and MW-59 were analyzed for volatile organic compounds including BTEX, naphthalene, methyl-tertiary butyl ether, 1,2 DCA, and oxygenates (EPA Method 8260B), ethylene dibromide (EPA Method 8011), and Total lead (Method 6010). Additionally, the monitoring wells installed in conjunction with this assessment were sampled for nitrate (Method 353.2), sulfate (Method 375.4) and field tested for ferrous iron. The results of the laboratory analyses are discussed in Section 3.1, summarized in Table 2, Table 2A, Table 3, and presented in Appendix B.

Groundwater elevation data from the May 8, 2007 gauging event were plotted. A groundwater contour map of the surficial aquifer was prepared (see Figure 6). The data used to prepare the groundwater contour map (groundwater elevations from watertable bracketing monitoring wells) are summarized on Table 1 and presented on Figure 6.

2.4 SURFACE WATER SAMPLING AND CHEMICAL ANALYSES

One nearby surface water (SW-1) was sampled during our assessment activities. On May 8, 2007, one surface water sample was collected. SW-1 was collected approximately 750 feet down gradient of the subject site (See Figure 3). This sample was collected from a probable groundwater seep along surface drainage feature located on Mr. Charles Dockins' property.

The sample collected from SW-1 was transported to Pace Analytical Services Inc. and tested for: benzene, toluene, ethylbenzene, xylenes (BTEX), 8-oxygenates, 1,2 DCA, methyl-tertiary butyl ether (MTBE), and naphthalene (EPA Method 8260B). The results of the laboratory analyses are discussed in section 3.2, summarized in Table 2, and presented in the Appendix.

3.0 TEST RESULTS AND EVALUATION

The following sections discuss groundwater test results for the subject site.

3.1 GROUNDWATER ANALYTICAL RESULTS

As discussed in Section 2.3, groundwater samples obtained from the monitoring wells were analyzed for dissolved phase petroleum constituents. The analytical results indicate petroleum impact to the local groundwater with the highest concentrations detected surrounding the former UST basin. Free phase petroleum product was detected at a thickness of 1.25 feet in MWR-1, 0.58 feet in MWR-4R, 0.29 feet in MWR-4, and 0.44 feet in MW-8. The analytical results for the shallow, watertable bracketing, zone indicate total BTEX and MTBE and concentrations ranging from levels below detection limits (BDL) to free product detected in MWR-1, MWR-4, MWR-4R, and in MW-8. The analytical results for the intermediate zone indicate total BTEX concentrations ranging from levels below detection limits (BDL) to 46,200 ug/l in monitoring well MW-17i. The analytical results indicate MTBE concentrations ranging from levels below detection limits (BDL) to 6,800 micrograms per liter in monitoring well MW-21i. The analytical results for the deep (wells advanced mud-rotary refusal) zone indicate total BTEX concentrations ranging from levels 223.9 ug/l in MW-

22D to 9,920 ug/l in monitoring well MW-18D. The analytical results indicate MTBE concentrations ranging from below detection limits to 1,700 micrograms per liter in monitoring well MW-18D. The analytical results for the rock (wells advanced to first fracture) zone indicate total BTEX concentrations ranging from levels below detection limits (BDL) to 9.2 ug/l in monitoring well MW-28DD. The analytical results indicate MTBE concentrations ranging from levels below detection limits (BDL) to 28 micrograms per liter in monitoring well MW-28DD.

The results of the analyses for each monitoring well and specific parameters are listed on Table 2, Table 2A, and 3, and the detection limit for each parameter is provided in the laboratory reports (Appendix B). Figure 8 through Figure 8B depict graphically the concentrations of Total BTEX (indicator for plume migration) in the shallow, intermediate, and deep zones at the site. Figure 9 through Figure 9B depict graphically the concentrations of dissolved MTBE in the shallow, intermediate, and deep zones at the site.

3.2 SURFACE WATER ANALYTICAL RESULTS

As discussed in Section 2.4, one nearby creek was (SW-1) was obtained and analyzed by Pace Analytical, Inc. for petroleum constituents. Sample SW-1 indicates petroleum impact (MTBE 300 ug/l) to the nearby creek. This sample (SW-1) was collected approximately 725 feet southeast of the former tank basin. This sample was collected from a possible groundwater seep. The results of the analyses are presented on Table 2 and sample location is presented on Figure 3. The detection limit for each parameter is provided in the laboratory reports (Appendix).

4.0 QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report is intended for the sole use by the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Notes:

1. mg/l = milligrams per liter.
2. Groundwater depths were measured from the top of the PVC riser pipe.
3. Groundwater levels measured 05/08/2007.
4. Dissolved oxygen, dissolved carbon dioxide, initial pH, initial conductivity, and temperature measurements obtained 5/7/07 & 5/8/07.
5. NT = Not Tested
6. Groundwater Elevations for MWR-1, MWR-4R, MW-4 and MW-8 Corrected for the presence of Free Phase Product based on a specific Gravity of Fuel of 0.85.

Explanation:

- Location of Water Table Bracketing Monitoring Well
- Location of Double Cased Monitoring Well (Top of Rock)
- Location of Double Cased Monitoring Well (Intermediate)
- Location of Double Cased Monitoring Well (Rock)
- Estimated Groundwater Flow Direction
- Estimated Location of Removed Underground Storage Tanks
- Estimated Location of Existing Underground Storage Tanks
- Ground-Water Elevation Isopleth (feet)

Notes:

Depth to groundwater measured on May 8, 2007.

Contour Interval = 4.00 Feet

Shallow Monitoring Wells Used in Contouring.

Site Datum Based on Assumed Spot Elevation.

Groundwater elevation corrected for the presence of free phase petroleum product in wells MWR-1, MWR-4R, MWR-4 and MW-8 based on a specific gravity of fuel of 0.85.

Ground Water Contours Computer Generated using Surfer by Golden Graphics and Modified by MECI Personnel.

Explanation:

- Location of Water Table Bracketing Monitoring Well
- Location of Double Cased Monitoring Well (Top of Rock)
- Location of Double Cased Monitoring Well (Intermediate)
- Location of Double Cased Monitoring Well (Rock)
- Estimated Groundwater Flow Direction
- Estimated Location of Removed Underground Storage Tanks
- Estimated Location of Existing Underground Storage Tanks
- MTBE Concentration Isopleth (ug/l)

Notes:

Groundwater samples collected on May 8, 2007.

Contour Interval = 400 ug/l

Top of Rock Monitoring Wells used in Contouring.

BDL = Below Detection Limits

FP= Not Sampled due to the Presence of Free Phase Petrolum Product

4. ABANDONMENT: ☐ Yes ☑ No
Grouted Depth: from _____ ft. to _____ ft.

Formation Description	*Thickness of Stratum	Depth to Bottom of Stratum
RED CLAY	10.0	10.0
BROWN SILTY CLAY	15.0	25.0
*Indicate Water Bearing Zones (Use a 2nd sheet if needed)		

5. REMARKS:
MW-14R2 BENTONITE SEAL FROM 4.0 TO 8.0 FT.

6. TYPE: ☐ Mud Rotary ☐ Jetted ☐ Bored ☐ Dug ☑ Air Rotary ☐ Driven ☐ Cable tool ☑ Other AUGER

7. PERMIT NUMBER:

8. USE: ☐ Residential ☐ Public Supply ☐ Process ☐ Irrigation ☐ Air Conditioning ☐ Emergency ☐ Test Well ☑ Monitor Well ☐ Replacement

9. WELL DEPTH (completed) 25.0 ft. Date Started: 03/20/07 Date Completed: 03/20/07

10. CASING: ☑ Threaded ☐ Welded
Diam.: 2 INCH
Type: ☑ PVC ☑ Galvanized ☐ Steel ☐ Other
2.0 in. to 10.0 ft. depth
_____ in. to _____ ft. depth
Height: Above ☐ Below ☐
Surface 0.0 ft.
Weight _____ lb./ft.
Drive Shoe? ☐ Yes ☐ No

11. SCREEN:
Type: SCH 40 PVC Diam.: 2 INCH
Slot/Gauge: .010 Length: 15.0 FEET
Set Between: 10.0 ft. and 25.0 ft.
_____ ft. and _____ ft.
NOTE: MULTIPLE SCREENS USE SECOND SHEET
Sieve Analysis ☐ Yes (please enclose) ☑ No

12. STATIC WATER LEVEL 12.0 ft. below land surface after 24 hours

13. PUMPING LEVEL Below Land Surface.
_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☐ No
Yield: _____

14. WATER QUALITY
Chemical Analysis ☐ Yes ☐ No Bacterial Analysis ☐ Yes ☐ No
Please enclose lab results.

15. ARTIFICIAL FILTER (filter pack) ☑ Yes ☐ No
Installed from 8.0 ft. to 25.0 ft.
Effective size 1.43 Uniformity Coefficient 1.30

16. WELL GROUTED? ☑ Yes ☐ No
☑ Neat Cement ☐ Bentonite ☐ Bentonite/Cement ☐ Other _____
Depth: From 0.0 ft. to 4.0 ft.

17. NEAREST SOURCE OF POSSIBLE CONTAMINATION: ____ ft. ____ direction
Type _____
Well Disinfected ☐ Yes ☐ No Type: _____ Amount: _____

18. PUMP: Date installed: _____ Not installed ☐
Mfr. Name: _____ Model No.: _____
H.P. _____ Volts _____ Length of drop pipe ____ ft. Capacity ____ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

RE: Lab Project Number: 92141425
Client Project ID: COUNTRY SIDE 62-1121

Dear Mr. Shane:

Enclosed are the analytical results for sample(s) received by the laboratory on April 2, 2007. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals Analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Charlotte laboratory unless otherwise footnoted.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Andy Stevens
andy.stevens@pacelabs.com
Project Manager

PARAMETER FOOTNOTES

Method 9071B modified to use ASE.

All pH, Free Chlorine, Total Chlorine and Ferrous Iron analyses conducted outside of EPA recommended immediate hold time.

Depending on the moisture content the PRLs can be elevated for all soil samples reported on a dry weight basis.

2-Chloroethyl vinyl ether has been shown to degrade in the presence of acid.

ND	Not detected at or above adjusted reporting limit
NC	Not Calculable
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit

Mr. Bryan Shane
Midlands Environmental
PO Box 854
Lexington, SC 29071

RE: Lab Project Number: 92144210
Client Project ID: Countryside 2 07-1121

Dear Mr. Shane:

Enclosed are the analytical results for sample(s) received by the laboratory on May 9, 2007. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals Analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Charlotte laboratory unless otherwise footnoted.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Andy Stevens
andy.stevens@pacelabs.com
Project Manager

Client Project ID: Countryside 2 07-1121

PARAMETER FOOTNOTES

Method 9071B modified to use ASE.

All pH, Free Chlorine, Total Chlorine and Ferrous Iron analyses conducted outside of EPA recommended immediate hold time.

Depending on the moisture content the PRLs can be elevated for all soil samples reported on a dry weight basis.

2-Chloroethyl vinyl ether has been shown to degrade in the presence of acid.

ND	Not detected at or above adjusted reporting limit
NC	Not Calculable
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
MDL	Adjusted Method Detection Limit
(S)	Surrogate
[1]	Surrogate recovery outside of acceptance window confirmed as a matrix effect by the analysis of a duplicate or MS/MSD on this sample.
[2]	Low surrogate recovery was confirmed as a matrix effect by a second analysis.

QUALITY CONTROL DATA PARAMETER FOOTNOTES

Consistent with EPA guidelines, unrounded concentrations are displayed and have been used to calculate % Rec and RPD values.

LCS(D)	Laboratory Control Sample (Duplicate)
MS(D)	Matrix Spike (Duplicate)
DUP	Sample Duplicate
ND	Not detected at or above adjusted reporting limit
NC	Not Calculable
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
MDL	Adjusted Method Detection Limit
RPD	Relative Percent Difference
(S)	Surrogate
[1]	The spike recovery was outside acceptance limits for the MS and /or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
[2]	Surrogate recovery outside of acceptance window confirmed as a matrix effect by the analysis of a duplicate or MS/MSD on this sample.
[3]	Recovery falls outside of QC limits, however, this compound is not found in the associated samples.
[4]	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
[5]	Low surrogate recovery was confirmed as a matrix effect by a second analysis.

RE: Lab Project Number: 92144108
Client Project ID: COUNTRY SIDE #2

Dear Mr. Shane:

Enclosed are the analytical results for sample(s) received by the laboratory on May 9, 2007. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals Analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Charlotte laboratory unless otherwise footnoted.

If you have any questions concerning this report please feel free to contact me.

Sincerely,

Andy Stevens
andy.stevens@pacelabs.com
Project Manager

Client Project ID: COUNTRY SIDE #2

PARAMETER FOOTNOTES

Method 9071B modified to use ASE.

All pH, Free Chlorine, Total Chlorine and Ferrous Iron analyses conducted outside of EPA recommended immediate hold time.

Depending on the moisture content the PRLs can be elevated for all soil samples reported on a dry weight basis.

2-Chloroethyl vinyl ether has been shown to degrade in the presence of acid.

ND	Not detected at or above adjusted reporting limit
NC	Not Calculable
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
MDL	Adjusted Method Detection Limit

Re: Treatment of Purge Water
Country Side 2
Westminster, South Carolina
SCDHEC Site ID Number 06742
MECI Project Number 07-1121

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The worst-case well analysis was obtained before usage of the Activated Carbon Unit. The worst-case well analysis shows only petroleum hydrocarbon constituents in the purge/bail water with minimal, background concentrations of lead. The purge/bail water was containerized on site before treatment for less than 30 days prior to treatment.

2. No free-product was detected in any of the purge water drums.

3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.

4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.

5. Record of usage is maintained by Contractor.

6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.

7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

2 – 55-gallon drums were treated on March 30, 2007 at the referenced site.

7 - 55-gallon drums were treated on May 7, 2007 at the referenced site.

A total of nine 55-gallon drums were treated at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320E

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on October 15, 2007. The event was conducted on monitoring wells MW-1R, MW-8, and MW-54 to remove free phase petroleum product and on monitoring well MW-7 to reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring wells MW-1R at a thickness of 0.10 feet, MW-8 at a thickness of 0.02 feet, and in MW-54 at a thickness of 0.07 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-7 prior to the AFVR event. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 8.38 pounds or approximately 1.45 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.21 pounds per hour. Concentrations of off gas produced during the event were recorded from 408 parts per million by volume (PPM) to 651 PPM. Measurements were obtained from vapors prior to entering off gas treatment.

UST PROGRAM
DOCKETING # 10

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2E. Monitoring well locations are depicted on attached Figure 1.

A total of 40 gallons of liquid was removed from MW-1R, MW-7, MW-8 and MW-54 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320F

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on October 15, 2007. The event was conducted on monitoring wells MWR-4 and MWR-4R to remove free phase petroleum product and on well MW-51 to reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring wells MWR-4 at a thickness of 0.42 feet and in MWR-4R at a thickness of 0.42 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-51 prior to the AFVR event. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 9.66 pounds or approximately 1.67 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.21 pounds per hour. Concentrations of off gas produced during the event were recorded from 512 parts per million by volume (PPM) to 732 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 17.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1F.

DOCUMENT

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2F. Monitoring well locations are depicted on attached Figure 1.

A total of 60 gallons of liquid was removed from MWR-4, MWR-4R, and MW-51 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320G

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on January 9, 2008. The event was conducted on monitoring wells MWR-1, MWR-4, MWR-4R, and MW-51 to remove free phase petroleum product and reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring well MWR-4 at a thickness of 0.39 feet and in MWR-4R at a thickness of 0.09 feet prior to the AFVR event.. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 8.98 pounds or approximately 1.55 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.12 pounds per hour. Concentrations of off gas produced during the event were recorded from 542 parts per million by volume (PPM) to 1,330 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 15.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1G.

UST PROGRAM
DOCKETING # 12

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2G. Monitoring well locations are depicted on attached Figure 1.

A total of 140 gallons of liquid was removed from MWR-1, MWR-4, MWR-4R, and MW-51 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #30052
MECI Project Number 07-1320H

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on January 9, 2008 through January 10, 2008. The event was conducted on monitoring wells MW-7R and MW-54 to remove free phase petroleum product and reduce dissolved CoC concentrations. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring well MW-54 at a thickness of 0.17 feet prior to the AFVR event. Free phase petroleum product was not detected in MW-7R prior to the event. MECI was unable to extract from monitoring well MW-8 due to lid not opening. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 4.67 pounds or approximately 0.81 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.58 pounds per hour. Concentrations of off gas produced during the event were recorded from 267 parts per million by volume (PPM) to 968 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 14.0 to 15.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1H.

UST PROGRAM
DOCKETING # 13

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2H. Monitoring well locations are depicted on attached Figure 1.

A total of 100 gallons of liquid was removed from MW-7R and MW-54 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Re: Bid # IFB-34007-6/3/08-EMW; PO# 732429
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct assessments at several facilities. The packets contain the necessary approval for work to begin. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 732429 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

UST Permit#	Facility	County	Release #	Work Scope	Due Date*	CA #	Approved Amt
06742	Country Side 2	Oconee	1	Monitoring well installation	60 days	33122	$9,290.00
12847	Laurens CPW	Laurens	1	Monitoring well installation	60 days	33125	$2,022.00
06768	Former Horton's Grocery	Oconee	1	Monitoring well installation	60 days	33097	$1,880.00

*From receipt of letter

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. **Please note, if there are any changes in the established cost agreement amounts (e.g., additional water supply wells sampled, additional well footage, etc.) contact the site's project manager for technical and/or financial approval. Failure to do so prior to submittal of invoice may result in delay of payment.**

The Bureau grants preapproval for transportation of drums of virgin petroleum contaminated soil and drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55-gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report. Please note, transportation of waste oil contaminated soil must receive preapproval from the Division of Waste Assessment & Emergency Response.

UST DOCKET / 4 tcl

Please provide this office with a schedule of drilling dates and coordinate all work with me before commencing work at the facility. If you have any questions or need further assistance, please contact me at (803) 896-6633.

Sincerely,

Cathleen Ridgley, Hydrogeologist

Monitoring Well Approval

Approval is hereby granted to: **Midlands Environmental Consultants, Inc.**

On behalf of: **Mr. Neil Alexander**

Facility: **Country Side 2**
8050 West Oak Highway, Westminster

UST Permit #: **06742**

County: **Oconee**

This approval is for the installation of eight groundwater monitoring/extraction wells. The monitoring/extraction wells are to be installed in the approved locations in accordance with the South Carolina Well Standards, R.61-71, and applicable guidance documents.

Please note that R.61-71 requires the following:

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.

2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.

3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f

4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.

padgetjp@dhec.sc.gov) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.

6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.

7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

MECI Project Number 08-1787

Dear Mr. Padgett,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Assessment Activities for the referenced site. This report describes assessment activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

PROJECT INFORMATION

The subject site (Country Side 2) is located at 8050 West Oak Highway in Westminster, Oconee County, South Carolina (see Figure 1). The subject site is currently occupied by an active gasoline service station. The subject site currently maintains one 10,000 gallon kerosene, one 10,000 gallon diesel, two 6,000 gallon gasoline, and one 8,000 gallon gasoline underground storage tanks.

The above information is based on reports and correspondence obtained from SCDHEC files and MECI field notes.

MONITORING WELL INSTALLATION

From August 13 through 15, 2008, eight single cased, 4-inch diameter monitoring wells were installed at the subject site. These wells were installed by Geologic Exploration, of Statesville, North Carolina (S.C. Driller Certification: Mark Gettys #A 01086). These watertable bracketing, single cased, monitoring wells (MW-60 through MW-67) were installed using a truck mounted drilling rig employing 10.5-inch outer diameter hollow-stem augers to construct the borehole. Monitoring wells MW-60 through MW-67 were installed to a depth of 45.0 feet below ground surface and screened from 25.0 feet BGS to 45.0 feet BGS.

Drill cuttings were containerized and transported to Waste Management Palmetto Landfill Wellford, SC by MECI personnel. A total of 7.80 tons was disposed of in this manner. A disposal manifest for these soils is attached at the end of this report.

MECI personnel performed a subsequent survey on August 20, 2008 at the subject site utilizing a fiberglass tape, level and rod. The locations of monitoring wells MW-60 through MW-67 are depicted on Figure 2. Top of Casing (TOC) elevations for these new monitoring wells are presented on Figure 2.

Test Boring Records showing soil descriptions and monitoring well installation details are included in Appendix A. Following completion of the monitoring wells, the wells were gauged and developed by bailing until they were determined to be functioning properly and turbidity was reduced. The drummed purge water was treated using a potable activated carbon unit. A total of one (1) drum of

purge/development water was disposed of in this manner. A disposal manifest for the drummed purge water is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessment and waste management projects of this type. Our evaluation of site conditions has been based on our understanding of the site, project information provided to us, and data obtained in our exploration. The general subsurface conditions utilized in our evaluation have been based on interpretation of subsurface data between borings. Contents of this report are intended for the sole use by the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Re: Treatment of Purge Water
Country Side 2
Westminster, South Carolina
SCDHEC Site ID Number 06742
MECI Project Number 08-1787

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The worst-case well analysis was obtained before usage of the Activated Carbon Unit. The worst-case well analysis shows only petroleum hydrocarbon constituents in the purge/bail water with minimal, background concentrations of lead. The purge/bail water was containerized on site before treatment for less than 30 days prior to treatment.

2. No free-product was detected in any of the purge water drums.

3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.

4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.

5. Record of usage is maintained by Contractor.

6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.

7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

One 55-gallon drum was treated on August 20, 2008 at the referenced site.

A total of one (1) 55-gallon drum was treated at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Jeffrey L. Coleman
Staff Scientist

Re: Bid # IBF-30519-8/8/06-EMW; PO # 646282
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct Aggressive Fluid Vapor Recovery (AFVR) event at several facilities. The packets contain the necessary approval for work to begin. You may commence with a site reconnaissance before the AFVR. If monitoring wells do not contain measurable free phase product, contact the UST project manager for further instructions. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 646282 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

UST Permit #	Facility	County	Release #	Work Scope	Due Date*	CA #	Approved Amt.
00316	Allendale Maintenance Facility	Allendale	1	1 AFVR	60 days	33699	1,225.00
15590	Newberry County Airport	Newberry	1	2 AFVR	60 days	33673	2,375.00
06768	Horton's Grocery	Oconee	1	4 AFVR	60 days	33674	4,475.00
01869	By Rite Petroleum	Charleston	1	4 AFVR	60 days	33706	4,675.00
06742	Country Side 2	Oconee	1	6 AFVR	60 days	33718	6,975.00
01056	Beaufort Patrol Facility	Beaufort	1	4 AFVR	60 days	33719	4,675.00

*From receipt of letter

UST DOCKET 16tech

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained.

If for any reason there are changes in these cost agreements, any associated changes to this cost agreement must be pre-approved by this Department in order for Midlands Environmental Consultants to seek future cost compensation. Please contact the site's project manager for technical and/or financial approval.

Any item(s) not clearly or completely addressed in the report (disposal manifest for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.

The Department grants pre-approval for transportation of free phase product and petroleum contaminated groundwater from the referenced site to a permitted treatment facility. The free product and contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the report.

If you have any questions concerning this correspondence or need further assistance, please contact me by phone at (803) 896-6664, by fax at (803) 896-6245 or by email at milenkmp@dhec.sc.gov.

Sincerely,

Maia Milenkova

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #33718
MECI Project Number 08-1937B

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on October 1, 2008. The event was conducted on MW-62, MW-63 and MW-64 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW- 62 at a thickness of 0.81 feet and MW-63 at a thickness of 0.03 feet and MW-64 at a thickness of 0.26 feet prior to the event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in the wells immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 8.34 pounds or approximately 1.44 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.04 pounds per hour. Concentrations of off gas produced during the event were recorded from 531 parts per million by volume (PPM) to 1588 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at 11.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1B.

UST DOCKET

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2B. Monitoring well locations are depicted on attached Figure 1.

A total of 50 gallons of liquid was removed from MW-62, MW-63 and MW-64 during this event. Free phase petroleum product was observed in the holding tank at the end of the event at a thickness of 0.05 feet. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #33718
MECI Project Number 08-1937C

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on October 2, 2008. The event was conducted on monitoring wells MW-65 and MW-67 to reduce dissolved COC concentrations and on MW-66 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW- 66 at a thickness of 0.28 feet prior to the event. Free phase petroleum product was not detected in monitoring wells MW-65 and MW-67 prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in the wells immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 15.20 pounds or approximately 2.63 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.90 pounds per hour. Concentrations of off gas produced during the event were recorded from 1,032 parts per million by volume (PPM) to 1,107 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 9.0 to 10.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1C.

UST DOCKET

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2C. Monitoring well locations are depicted on attached Figure 1.

A total of 155 gallons of liquid was removed from MW-65, MW-66, and MW-67 during this event. Free phase petroleum product was observed in the holding tank at the end of the event at a thickness of 0.20 feet. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #33718
MECI Project Number 08-1937A

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

A site visit was conducted on September 26, 2008 at Country Side 2 to locate/gauge monitoring wells and to evaluate current site conditions. MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on September 30, 2008. The event was conducted on monitoring wells MW-1A to reduce dissolved COC concentrations and on MW-60 and MW-61 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW-60 at a thickness of 1.88 feet and in MW-61 at a thickness of 0.99 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-1A prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in MW-60 at a thickness of 1.10 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the wells were 5.24 pounds or approximately 0.90 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.66 pounds per hour. Concentrations of off gas produced during the event were recorded from 398 parts per million by volume (PPM) to 612 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at 11.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1A.

UST DOCKET

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

19 tech

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2A. Monitoring well locations are depicted on attached Figure 1.

A total of 40 gallons of liquid was removed from MW-1A, MW-60 and MW-61 during this event. Free phase petroleum product was observed in the holding tank at the end of the event at a thickness of 0.20 feet. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

for William R. Owen
Staff Scientist

William C. McClary, P.G.
Senior Geologist

UST Permit # 06742
Report of Assessment Activities received June 11, 2007
Oconee County

Dear Mr. Land:

As you may be aware, the Underground Storage Tank (UST) Program directed Midlands Environmental Consultants, Incorporated to install additional monitoring wells plus sample the existing monitoring well network associated with release at the referenced facility. The most recent Assessment Report appears to have defined the extent of petroleum Chemicals of Concern (CoC) in the soil and groundwater. A copy of the report is enclosed for your information and files.

Based on these results, the UST Program will continue to direct Midlands Environmental Consultants to remove free phase product as we did in January and March of 2007. Costs for this latest scope of work and future free product recovery events will be paid from the State Underground Petroleum Environmental Response Bank (SUPERB) Account.

Thank you for your consideration. On all correspondence regarding this site, please reference UST permit number 06742. Please feel free to contact me at (803) 896-6669, fax me at (803) 896-6245 or e-mail me at shradeaa@ dhec.sc.gov if you have questions or need additional information.

Sincerely,

Arthur Shrader, Hydrogeologist

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #33718
MECI Project Number 08-1937F

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on November 6, 2008. The event was conducted on monitoring wells MW-1A to reduce dissolved COC concentrations and on MW-60 and MW-61 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW-60 at a thickness of 2.92 feet and in MW-61 at a thickness of 0.33 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-1A prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in MW-60 at a thickness of 0.89 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the wells were 9.90 pounds or approximately 1.71equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.24 pounds per hour. Concentrations of off gas produced during the event were recorded from 841 parts per million by volume (PPM) to 930 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 13.0 to 16.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1F.

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2F. Monitoring well locations are depicted on attached Figure 1.

A total of 30 gallons of liquid was removed from MW-1A, MW-60 and MW-61 during this event. Free phase petroleum product was observed in the holding tank at the end of the event at a thickness of 0.20 feet. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #33718
MECI Project Number 08-1937E

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on November 4, 2008. The event was conducted on MW-62, MW-63 and MW-64 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW- 62 at a thickness of 2.90 feet and MW-63 at a thickness of 0.70 feet and MW-64 at a thickness of 4.25 feet prior to the event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in the monitoring well MW-64 at a thickness of 2.04 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 16.00 pounds or approximately 2.76 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 2.00 pounds per hour. Concentrations of off gas produced during the event were recorded from 816 parts per million by volume (PPM) to 3,417 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 14.0 to 15.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1E.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2E. Monitoring well locations are depicted on attached Figure 1.

A total of 20 gallons of liquid was removed from MW-62, MW-63 and MW-64 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #33718
MECI Project Number 08-1937D

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on November 3, 2008. The event was conducted on monitoring wells MW-65 to reduce dissolved COC concentrations and on MW-66 and MW-67 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring wells MW- 66 at a thickness of 0.05 feet and in MW-67 at a thickness of 0.32 feet prior to the event. Free phase petroleum product was not detected in monitoring well MW-65 prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in monitoring well MW-67 at a thickness of 0.02 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 16.86 pounds or approximately 2.91 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 2.11 pounds per hour. Concentrations of off gas produced during the event were recorded from 924 parts per million by volume (PPM) to 1,383 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 11.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1D.

UST

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2D. Monitoring well locations are depicted on attached Figure 1.

A total of 100 gallons of liquid was removed from MW-65, MW-66, and MW-67 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

for Brandon T. Guiles
Staff Biologist

for William C. McClary, P.G.
Senior Geologist

Re: Bid # IBF-30519-8/8/06-EMW; PO # 646282
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct Aggressive Fluid Vapor Recovery (AFVR) event at several facilities. The packets contain the necessary approval for work to begin. You may commence with a site reconnaissance before the AFVR. If monitoring wells do not contain measurable free phase product, contact the UST project manager for further instructions. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 646282 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

UST Permit #	Facility	County	Release #	Work Scope	Due Date*	CA #	Approved Amt
03144	Ridgeway Section Shed	Fairfield	1	1 AFVR	60days	34599	1,270.00
12342	R & S Grocery	Darlington	1	1 AFVR	60days	34612	1,270.00
06742	Country Side 2	Oconee	1	6 AFVR	60days	34645	6,725.00
15590	Newberry County Airport	Newberry	1	2 AFVR	60days	34648	2,325.00
01869	By Rite Petroleum	Charleston	1	2 AFVR	60days	34650	2,325.00
06768	Horton's Grocery	Oconee	1	4 AFVR	60days	34652	4,575.00

*From receipt of letter

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained.

UST DOCKET

23 Feb

If for any reason there are changes in these cost agreements, any associated changes to this cost agreement must be pre-approved by this Department in order for Midlands Environmental Consultants to seek future cost compensation. Please contact the site's project manager for technical and/or financial approval.

Any item(s) not clearly or completely addressed in the report (disposal manifest for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.

The Department grants pre-approval for transportation of free phase product and petroleum contaminated groundwater from the referenced site to a permitted treatment facility. The free product and contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the report.

If you have any questions concerning this correspondence or need further assistance, please contact me by phone at (803) 896-6664, by fax at (803) 896-6245 or by email at milenkmp@dhec.sc.gov.

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on January 7, 2009. The event was conducted on monitoring wells MW-62, MW-63 and MW-64 to remove free phase petroleum product from. Free phase petroleum product was detected in monitoring wells MW-62 at a thickness of 4.31 feet, MW-63 at a thickness of 1.36 feet, and MW-64 at a thickness of 4.45 feet prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in monitoring well MW-63 however it was detected in monitoring wells MW-62 at a thickness of 0.90 feet and in MW-64 at a thickness of 2.23 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 3.70 pounds or approximately 0.64 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 0.46 pounds per hour. Concentrations of off gas produced during the event were recorded from 218 parts per million by volume (PPM) to 763 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 14.0 to 17.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1B.

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2B. Monitoring well locations are depicted on attached Figure 1.

A total of 40 gallons of liquid was removed from MW-62, MW-63 and MW-64 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #34645
MECI Project Number 08-2081C

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on January 8, 2009. The event was conducted on monitoring wells MW-60 and MW-61 to remove free phase petroleum product in MW-60 and to reduce dissolved COC concentrations in MW-61. Free phase petroleum product was detected in monitoring well MW-60 at a thickness of 4.30 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-61 prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in well MW-60 at a thickness of 4.29 feet immediately following the event. Free phase petroleum product was not detected in well MW-61 immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 12.42 pounds or approximately 2.15 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.55 pounds per hour. Concentrations of off gas produced during the event were recorded from 1,013 parts per million by volume (PPM) to 1,831 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 14.0 to 15.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1C.

UST DOCKET

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2C. Monitoring well locations are depicted on attached Figure 1.

No liquid was removed from MW-60 and MW-61 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #34645
MECI Project Number 08-2081A

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on January 6, 2009. The event was conducted on monitoring wells MW-66 and MW-67 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring wells MW-66 at a thickness of 0.05 feet and in MW-67 at a thickness of 0.41 feet prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in the wells immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 9.16 pounds or approximately 1.58 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.15 pounds per hour. Concentrations of off gas produced during the event were recorded from 810 parts per million by volume (PPM) to 1,068 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 15.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1A.

Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2A. Monitoring well locations are depicted on attached Figure 1.

No liquid was removed from MW-66 and MW-67 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #34645
MECI Project Number 08-2081F

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on February 10-11, 2009. The event was conducted on monitoring wells MW-66 and MW-67 to remove free phase petroleum product. Free phase petroleum product was detected in monitoring wells MW-66 at a thickness of 0.03 feet and MW-67 at a thickness of 0.74 feet prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in the wells immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 40.55 pounds or approximately 7.01 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 5.07 pounds per hour. Concentrations of off gas produced during the event were recorded from 1,268 parts per million by volume (PPM) to 3,841 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 15.0 to 16.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1F.

Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2F. Monitoring well locations are depicted on attached Figure 1.

A total of 100 gallons were removed from MW-66 and MW-67 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. Free phase petroleum product was observed in the sight tube at a thickness of 0.04 feet during the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID #06742; CA #34645
MECI Project Number 08-2081E

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on February 10, 2009. The event was conducted on monitoring wells MW-62, MW-63 and MW-64 to remove free phase petroleum product from. Free phase petroleum product was detected in monitoring wells MW-62 at a thickness of 4.33 feet, MW-63 at a thickness of 4.56 feet, and MW-64 at a thickness of 5.24 feet prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in monitoring well MW-64; however, it was detected in monitoring wells MW-62 at a thickness of 3.39 feet and MW-63 at a thickness of 1.95 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 58.44 pounds or approximately 10.09 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 7.31 pounds per hour. Concentrations of off gas produced during the event were recorded from 2,307 parts per million by volume (PPM) to 3,509 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 14.0 to 17.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1E.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

UST
DOCKET
28 feet

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2E. Monitoring well locations are depicted on attached Figure 1.

A total of 40 gallons of liquid was removed from MW-62, MW-63 and MW-64 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. Free phase petroleum product was observed in the sight tube at a thickness of 0.42 feet during the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #34645
MECI Project Number 08-2081D

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on February 9, 2009. The event was conducted on monitoring wells MW-60, to remove free phase petroleum product and on MW-61 to reduce dissolved COC concentrations. Free phase petroleum product was detected in monitoring well MW-60 at a thickness of 4.55 feet prior to the AFVR event. Free phase petroleum product was not detected in monitoring well MW-61 prior to the AFVR event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in well MW-60 at a thickness of 0.02 feet immediately following the event. Free phase petroleum product was not detected in well MW-61 immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 34.55 pounds or approximately 5.97 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 4.32 pounds per hour. Concentrations of off gas produced during the event were recorded from 1,000 parts per million by volume (PPM) to 1,796 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 12.5 to 17.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1D.

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2D. Monitoring well locations are depicted on attached Figure 1.

A total of 15 gallons were removed from MW-60 and MW-61 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Re: Bid # IBF-36815-8/27/09-EMW; PO # 782295
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct Free Product (FP) recovery using Aggressive Fluid Vapor Recovery (AFVR) or passive skimmers at several facilities. The packets contain the necessary approval for work to begin. You may commence with a site reconnaissance before the AFVR and/or passive skimmers installation. If monitoring wells do not contain measurable free phase product, contact the UST project manager for further instructions. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 782295 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).

UST Permit #	Facility	County	Releas	Work Scope	Due Date*	CA #	Approved Amt.
04581	Danahue Grocery	Spartanburg	1	1 AFVR	60 days	37524	1,325.00
06926	Quick Pantry 12	Orangeburg	1	3 AFVR	60 days	37611	3,315.00
06742	Former Crossroads Grocery	Oconee	1	6 AFVR	60 days	35630	6,465.00

*From receipt of letter

UST DOCKET 20T

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained.

If for any reason there are changes in these cost agreements, any associated changes to this cost agreement must be pre-approved by this Department in order for Midlands Environmental Consultants to seek future cost compensation. Please contact the site's project manager for technical and/or financial approval. Any item(s) not clearly or completely addressed in the report (disposal manifest for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.

The Department grants pre-approval for transportation of free phase product and petroleum contaminated groundwater from the referenced site to a permitted treatment facility. The free product and contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the report.

If you have any questions concerning this correspondence or need further assistance, please contact me by phone at (803) 896-6664, by fax at (803) 896-6245 or by email at milenkmp@dhec.sc.gov.

Sincerely,

Maia Milenkova

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID # 06742; CA # 35630
MECI Project Number 09-2552B
Certified Site Rehabilitation Contractor UCC-0009

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Crossroads Grocery on December 1, 2009. The event was conducted on monitoring wells MW-62, MW-63, and MW-64 to remove free phase petroleum product. Free phase petroleum product was detected in MW-62 at a thickness of 3.03 feet, in MW-63 at a thickness of 2.77 feet, and in MW-64 at a thickness of 2.89 feet prior to the AFVR event. The event was continuously conducted for eight hours on MW-66 and MW-67 by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum was detected in the monitoring well MW-62 at a thickness of 0.70, in MW-63 at a thickness of 1.30 feet, and in MW-64 at a thickness of 2.80 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the wells was 18.24 pounds or approximately 3.15 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 2.28 pounds per hour. Concentrations of off gas produced during the event were recorded from 483 parts per million by volume (PPM) to 960 PPM. Measurements were obtained from vapors prior to entering off gas treatment.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Vacuum readings were recorded at a range of 10.0 to 16.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1B.

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2B. Monitoring well locations are depicted on attached Figure.

No liquid was removed from MW-51, MW-65, MW-66, and MW-67 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID # 06742; CA # 35630
MECI Project Number 09-2552A
Certified Site Rehabilitation Contractor UCC-0009

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

On November 25, 2009, MECI personnel conducted a site visit at the Former Crossroads Grocery to locate/gauge monitoring wells and to evaluate current site conditions. MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Crossroads Grocery on November 30, 2009. The event was conducted on monitoring wells MW-51, MW-65, MW-66, and MW-67 to remove free phase petroleum product. Free phase petroleum product was detected in MW-51 at a thickness of 0.99 feet, in MW-65 at a thickness of 1.85 feet, in MW-66 at a thickness of 0.08 feet, and in MW-67 at a thickness of 2.55 feet prior to the AFVR event. The event was continuously conducted for eight hours on MW-66 and MW-67 by MECI personnel utilizing a vacuum extraction unit. Additionally, the event was conducted for four hours on MW-51 and four hours on MW-65 to maximize free product recovery. Free phase petroleum product was not detected in the wells MW-51, MW-65, and MW-66 immediately following the event. Free phase petroleum was detected in the monitoring well MW-67 at a thickness of 1.25 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the wells was 37.02 pounds or approximately 6.39

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 4.63 pounds per hour. Concentrations of off gas produced during the event were recorded from 928 parts per million by volume (PPM) to 1,935 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 8.0 to 13.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1A.

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2A. Monitoring well locations are depicted on attached Figure.

A total of 200 gallons of liquid was removed from MW-51, MW-65, MW-66, and MW-67 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID # 06742; CA # 35630
MECI Project Number 09-2552C
Certified Site Rehabilitation Contractor UCC-0009

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Crossroads Grocery on December 3, 2009. The event was conducted on monitoring well MW-60 to remove free phase petroleum product. Free phase petroleum product was detected in MW-60 at a thickness of 3.00 feet prior to the AFVR event. The event was continuously conducted for eight hours on MW-60 by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum was detected in the monitoring well MW-60 at a thickness of 2.26 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the wells was 12.56 pounds or approximately 2.17 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.57 pounds per hour. Concentrations of off gas produced during the event were recorded from 271 parts per million by volume (PPM) to 2,215 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 19.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1C.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2C. Monitoring well locations are depicted on attached Figure.

There was no liquid removed from monitoring well MW-60 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

PROGRAM

1. CONTRACTOR OF CHOICE

06742

As the UST Owner/Operator of UST Permit # 6742, I would like to use the contractor or person(s) listed below and request that they represent me for:

☐ Current Work Scope Only
☑ All future assessment scopes **

Name of Contractor/Person(s) BUNNELL-LAMMONS ENGINEERING

Address 6004 PONDERS COURT
GREENVILLE, SC
29615

Telephone Number (864) 288-1265

Note: After September 20, 1997, rehabilitation activities must be performed by a SC Certified Site Rehabilitation Contractor.

*Indicate if the person listed is your own employee

**** If you would like the contractor to perform all future assessment activities at this and/or other UST sites that have confirmed releases, please provide a list of all sites on your letterhead and provide the information requested in items 2 and 3 below within the context of the letter.**

2. FINANCIAL OR FAMILIAL RELATIONSHIP

Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above?
____ Yes _✓_ No (please initial)

Financial Relationship: A connection or association through a material interest of sources of income, which exceed five percent of annual gross income from a business entity.

Familial Relationship: A connection or association by family or relatives, in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancé.

3. PAYMENT

You can pay the contractor and, upon the submittal of the canceled check (front and back) or a notarized statement from the contractor verifying payment, be compensated from the SUPERB Account, or have payment issued directly from the SUPERB Account to the contractor. (Check one)

____ I request that payment be made to me after I have paid the contractor.

_✓_ I request that payment be made directly to the contractor.

(Note: all costs must receive prior financial approval from the Department regardless of payment option.)

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #35630
MECI Project Number 09-2552D

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Former Crossroads Grocery on February 02, 2010. The event was conducted on monitoring wells MW-60 and MW-1A to reduce dissolved COC concentrations and to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW-60 and MW-1A prior to the AFVR event at a thickness of 0.72 feet and 0.01 feet prior to the event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in MW-60 at a thickness of 0.06 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 16.33 pounds or approximately 2.82 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 2.04 pounds per hour. Concentrations of off gas produced during the event were recorded from 749 parts per million by volume (PPM) to 1,212 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 12.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1D.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2D. Monitoring well locations are depicted on attached Figure 1.

A total of 50 gallons of liquid was removed from MW-60 and MW-1A during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #35630
MECI Project Number 09-2552E

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Former Crossroads Grocery on February 03, 2010. The event was conducted on monitoring wells MW-62, MW-63 and MW-64 to reduce dissolved COC concentrations and to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW-62 at a thickness of 1.12 feet, MW-63 at a thickness of 1.70 feet and MW-64 at a thickness of 2.41 feet prior to the event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was not detected in monitoring wells immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 14.45 pounds or approximately 2.50 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.81 pounds per hour. Concentrations of off gas produced during the event were recorded from 244 parts per million by volume (PPM) to 2,722 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 8.0 to 12.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1E.

Post Office Box 854, Lexington SC 29071 • 235-B Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2E. Monitoring well locations are depicted on attached Figure 1.

A total of 110 gallons of liquid was removed from MW-62, MW-63 and MW-64 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #35630
MECI Project Number 09-2552F

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Former Crossroads Grocery on February 4, 2010. The event was conducted on monitoring wells MW-51, MW-66 and MW-67 to reduce dissolved COC concentrations and to remove free phase petroleum product. Free phase petroleum product was detected in monitoring well MW-51 at a thickness of 0.50 feet, in MW-66 at a thickness of 0.03 feet and in MW-67 at a thickness of 0.16 feet prior to the event. The event was conducted continuously for eight hours by MECI personnel utilizing a vacuum extraction unit. Free phase petroleum product was detected in monitoring well MW-51 at a thickness of 0.04 feet immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 10.48 pounds or approximately 1.81 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.31 pounds per hour. Concentrations of off gas produced during the event were recorded from 204 parts per million by volume (PPM) to 1,100 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 12.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1F.

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2F. Monitoring well locations are depicted on attached Figure 1.

A total of 140 gallons of liquid was removed from MW-51, MW-66 and MW-67 during this event. Free phase petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

UST DOCKET

MR NEIL ALEXANDER
C/O ALLEY ANTIQUES
8050 WEST OAK HWY
WESTMINSTER SC 29693-5534

Re: Aggressive fluid and vapor recovery (AFVR) directive
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; Cost Agreement #38329
Release reported Janaury 11, 1993
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site using Bunnell-Lammons Engineering, Inc. as your contractor. The next scope of work is to continue aggressive fluid and vapor recovery (AFVR) events to remove residual free-phase product and reduce concentrations of chemicals of concern (CoC). Please have your contractor conduct one event on monitoring/recovery wells MW-1A, MW-60, and MW-61, one event on monitoring/recovery wells MW-62, MW-63, and MW-64, and one event on monitoring/recovery wells MW-65, MW-66, and MW-67. Off-gas treatment will be necessary.

Cost Agreement #38329 has been approved in the amount shown on the enclosed cost agreement form for the AFVR events. AFVR activities may proceed immediately upon receipt of this letter. The report submitted at the completion of the events should include the following items:

- A narrative portion documenting each AFVR event noting site conditions, the name of the AFVR contractor, field personnel, date, time the AFVR event started and ended, ambient air temperature, and general weather conditions.
- A brief description of the completed work scope and any relevant descriptions pertaining to the data tables.
- A table summarizing the airflow (in CFM) and volatile air emissions concentrations collected from the stack of the truck every thirty minutes through the duration of each event or for one eight-hour period per day for each extended event. The table shall also document which well(s) were being recovered from during that time interval.
- A table summarizing magnehelic gauge measurements on a thirty-minute time interval through the duration of each event or for one eight-hour period per day for each extended event. The gauges must be installed on the extraction well(s) and immediately surrounding wells.

- The total volume of water recovered in gallons.
- The total volume of free-phase product recovered in gallons (typically measured with a product/water interface device inserted into the top of the tanker at the completion of each event and then converted to an approximate volume).
- The total weight of petroleum removed as vapor in pounds. This is calculated based on the airflow rate and the concentration of vapor.
- A table documenting the free-product thickness in each well before and after each AFVR event.
- A scaled base map depicting the location of the extraction wells and the surrounding wells equipped with magnehelic gauges.

The drop tube or "stinger" should be installed six inches below the free-phase product or at the top of the well screen if free-phase product is not present. The tube may be installed deeper only if the extraction well exhibits slow recovery (repeatedly goes dry) or if it is necessary to establish a steeper hydraulic gradient to enhance product migration towards the extraction well. The overall goal is to maximize the recovery of free-phase product and petroleum vapors in the capillary fringe and minimize the recovery of groundwater.

Bunnell-Lammons can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor.

An AFVR report and invoice are due within 90 days from the date of this letter. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Department for the cost to be paid. SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The Division grants pre-approval for transportation of up to 5,000 gallons of free-phase product and petroleum-contaminated groundwater from the referenced facility to a permitted treatment facility. The product and groundwater must be properly stored in labeled containers and must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report.

On all correspondence concerning this facility, please reference UST Permit #06742. If there are any questions concerning this project, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

BLE Project No. J10-6940-01

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander of the Former Crossroads Grocery, Bunnell-Lammons Engineering, Inc. (BLE) has completed three aggressive fluid vapor recovery events (AFVRs) at the subject site. This scope of work was performed in response to South Carolina Department of Health and Environmental Control's (SCDHEC) letter, dated March 4, 2010. The results of our activities are provided herein. Please feel free to contact us if you have any questions concerning this report.

Sincerely,

PROJECT INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported by Midlands Environmental in January 1993. Various environmental assessments have been conducted at the site by other consultants since 1993, including the installation of seventy-two groundwater monitoring wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Petroleum free-product recovery has been conducted via numerous aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property.

In a directive dated March 4, 2010, SCDHEC required additional AFVR events at the site, to remove residual free-phase product and to reduce concentrations of dissolved chemicals of concern (CoCs). This directive for multiple AFVR events required recovery from wells MW-1A, MW-60, and MW-61 (event 1), MW-62, MW-63, and MW-64 (event 2), and MW-65, MW-66, and MW-67 (event 3).

BLE performed the tasks required by SCDHEC during three AFVR events, which are documented in this report.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #1 – MAY 28, 2010

On May 28, 2010, the first 8-hour AFVR event was conducted in monitoring wells MW-65, MW-66, and MW-67. A geologist from BLE was on site for observation and monitoring. The AFVR event was performed by Caro-Vac of Mauldin, South Carolina (Caro-Vac). Prior to initiating the

event, BLE personnel gauged the monitoring wells using a Solinst® Interface Meter Model 122. Approximately 0.06, 0.01 feet, and 0.06 feet of petroleum free-product was measured in MW-65, MW-66, and MW-67, respectively (Figure 2). Additionally, the initial depth to free-product/groundwater in adjacent monitoring wells MWR-1 and MW-51 were measured (feet below top of PVC casing (btoc)) and recorded on Table 1.

The AFVR event was initiated at 1030 and concluded at 1830. The general weather conditions observed during this period of time were clear; winds varied between 5 and 10 mph with an ambient temperature between 80º and 90º Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum of approximately 22 inches of mercury was applied to MW-65, MW-66, and MW-67. In addition to collecting vacuum readings, the depth to water (feet btoc) was measured every 30 minutes in MWR-1 and MW-51, to evaluate drawdown. Gauging data observed during the event is shown in Table 1.

Due to the close proximity of the site to a populated area, volatile air emissions were treated on-site by Caro-Vac personnel utilizing a vapor exhaust chiller and a granulated activated carbon (GAC) unit. Influent and effluent vapor concentrations were measured every 30 minutes throughout the event using a MiniRAE® 2000 Photo Ionization Detector (PID). The observed vapor concentrations are shown in Table 1.

At the completion of the AFVR event, a total volume of 1,635 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Please note that petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 1.02 pounds of gasoline vapor which is equivalent to approximately 0.16 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 1A.

The AFVR wells were gauged immediately following the conclusion of the event and 0.01 feet of free-product was observed in MW-66. Free-phase product was not detected in MW-65 or MW-67. Total water level changes for this event are shown in Table 1.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #2 – JUNE 1, 2010

On June 1, 2010, the second 8-hour AFVR event was conducted in monitoring wells MW-62, MW-63, and MW-64. A geologist from BLE was on site for observation and monitoring and the AFVR event was performed by Caro-Vac. Prior to initiating the event, BLE personnel gauged the monitoring wells using a Solinst® Interface Meter Model 122. Approximately 0.02 feet of petroleum free-product was measured in MW-64 (Figure 2). Free-product was not detected in MW-62 or MW-63. Additionally, the initial depth to free-product/groundwater in adjacent source area wells MW-7, MW-7R, and MW-54 was measured (feet btoc) and recorded on Table 2.

The AFVR event was initiated at 0945 and concluded at 1745. The general weather conditions observed during this period of time were cloudy; winds varied between 5 and 10 mph with an ambient temperature between 75º and 80º Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum of approximately 24 inches of mercury was applied to MW-62, MW-63, and MW-64. In addition to collecting vacuum readings, the depth to free-product/groundwater (feet btoc) was measured every 30 minutes in MW-7, MW-7R, and MW-54 to evaluate drawdown. Gauging data observed during the event is shown in Table 2.

Due to the close proximity of the site to a populated area, volatile air emissions were treated on-site by Caro-Vac personnel utilizing a vapor exhaust chiller and a GAC unit. Influent and effluent vapor concentrations were measured every 30 minutes throughout the event using a MiniRAE® 2000 PID. The observed vapor concentrations are shown in Table 2.

At the completion of the AFVR event, a total volume of 1,635 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Please note that petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR

event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 0.51 pounds of gasoline vapor which is equivalent to approximately 0.08 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 2A.

The AFVR monitoring wells were gauged immediately following the conclusion of the event and 0.01 feet and 0.02 feet of free-phase product was observed in MW-62 and MW-64, respectively. No free-phase product was observed in MW-63. Total free-product/water level changes for this event are shown in Table 2.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #3 – JUNE 2, 2010

On June 2, 2010, the third 8-hour AFVR event was conducted in monitoring wells MWR-1A, MW-60, and MW-61. A geologist from BLE was on site for observation and monitoring and the AFVR event was performed by Caro-Vac. Prior to initiating the event, BLE personnel gauged 0.01 feet of free-phase petroleum product in MWR-1A, 1.68 feet of free-product in MW-60, and 0.03 feet of free-product in MW-61 (Figure 2). Additionally, the initial depth to free-product/groundwater in adjacent source area wells (feet btoc) MW-8 and an unknown monitoring well (MW-X) were measured and recorded on Table 3.

The AFVR event was initiated at 1030 and concluded at 1830. The general weather conditions observed during this period of time were mostly cloudy; winds varied between 5 and 10 mph with an ambient temperature between 70º and 85º Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum of approximately 23 inches of mercury was applied to MWR-1A, MW-60, and MW-61. In addition to collecting vacuum readings, the depth to free-product/groundwater (feet btoc) was measured every 30 minutes in wells MW-8 and MW-X to evaluate drawdown. Gauging data observed during the event is shown in Table 3.

Due to the close proximity of the site to a residential area, volatile air emissions were treated on-site by Caro-Vac personnel utilizing a vapor exhaust chiller and a GAC unit. Influent and effluent vapor concentrations were measured every 30 minutes throughout the event using a MiniRAE® 2000 PID. The observed vapor concentrations are shown in Table 3.

At the completion of the AFVR event, a total volume of 1,150 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Please note that petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 1.34 pounds of gasoline vapor which is equivalent to approximately 0.22 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 3A.

The AFVR monitoring wells were gauged immediately following the conclusion of the event and no free-phase product was observed. Total free-product/water level changes for this event are shown in Table 3.

RECOMMENDATIONS

On June 17, 2010, BLE personnel mobilized to the site to measure free-product levels in MWR-1A, MWR-1, MW-8, MW-51, MW-54, MW-60 through MW-67, and MW-X. The results of our findings are shown on Table 4.

The AFVR events have been successful at reducing free-product thicknesses in the monitoring wells; however, free-product is still present in monitoring wells MWR-1A, MWR-1, MW-8, MW-51, MW-54, MW-60, MW-62, MW-64, MW-66, and MW-67. Therefore, we recommend an additional series of multiple 8-hour AFVR events be conducted to 1) remove residual free-phase product from

the area around the extraction points, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum impacted groundwater (mass) from the subsurface.
We recommend performing additional AFVRs in well clusters consisting of the following:

- Cluster 1 - MWR-1A, MW-8, and MW-60;
- Cluster 2 - MW-54, MW-62, and MW-64;
- Cluster 3 - MWR-1 and MW-66;
- Cluster 4 - MW-51 and MW-67.

The AFVR events should be performed in each well cluster, on consecutive days. Approximately 30 days after the fourth AFVR event, we recommend remobilizing to the site to perform one additional AFVR event in the "worst case" well cluster. Free-product levels will be gauged from the well clusters approximately 15 days after the fifth AFVR event to evaluate progress. This data will be presented in our of findings

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

NOTES:

AFVR event performed on May 28, 2010

Vapor concentrations measured using a portable MiniRAE® 2000
Photo-Ionization Detector (PID).

0.06 feet (MW-65), 0.01 feet (MW-66), and 0.06 feet (MW-67) of free-product was detected prior to AFVR

inches of Hg - inches of mercury

BTOC - below top of casing

ppm - parts per million

Total Pounds of Carbon Recovered as Emissions: 0.88

Total Pounds of Gasoline Recovered as Emissions: 1.02

Total Gallons of Gasoline Recovered as Emissions: 0.16

NOTES:

AFVR event performed on May 28, 2010
Vacuum applied to monitoring wells MW-65, MW-66, and MW-67
0.06 feet (MW-65), 0.01 feet (MW-66), and 0.06 feet (MW-67) of free-product was detected prior to AFVR
Vapor concentrations measured using a portable MiniRAE® 2000 Photo-Ionization Detector (PID).
inches of Hg - inches of mercury
ppm - parts per million
Q_{std} - flow at DSCFM
DSCFM - Dry Standard Cubic Feet per Minute
PPM_d - "dry" concentration

PPM_c - volumetric concentration of VOC emissions as carbon, dry basis, at STP
K - number of carbons in calibration gas
C_{cm} - mass concentration of VOC emissions as carbon
PMR_c - pollutant mass removal of VOCs as carbon
PMR_g - pollutant mass removal of VOCs as gasoline
B_{wsw} - lb of water per lb of dry air
B_{ws} - water vapor % by volume
Calculations have been derived from published guidance

Total Pounds of Carbon Recovered as Emissions: 1.16

Total Pounds of Gasoline Recovered as Emissions: 1.34

Total Gallons of Gasoline Recovered as Emissions: 0.22

NOTES:

AFVR event performed on June 2, 2010
Vacuum applied to monitoring wells MW-1A, MW-60, and MW-61.
0.10 feet (MWR-1A), 1.68 feet (MW-60), and 0.03 feet (MW-61) of free-product was detected prior to AFVR event.
Vapor concentrations measured using a portable MiniRAE® 2000 Photo-Ionization Detector (PID).
inches of Hg - inches of mercury
ppm - parts per million
Q_{std} - flow at DSCFM
DSCFM - Dry Standard Cubic Feet per Minute
PPM_d - "dry" concentration

PPM_c - volumetric concentration of VOC emissions as carbon, dry basis, at STP
K - number of carbons in calibration gas
C_{cm} - mass concentration of VOC emissions as carbon
PMR_c - pollutant mass removal of VOCs as carbon
PMR_g - pollutant mass removal of VOCs as gasoline
B_{wsw} - lb of water per lb of dry air
B_{ws} - water vapor % by volume
Calculations have been derived from published guidance

Re: Aggressive fluid and vapor recovery (AFVR) directive
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; Cost Agreement #39531
Release reported January 11, 1993
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site using Bunnell-Lammons Engineering, Inc. as your contractor. The next scope of work is to continue aggressive fluid and vapor recovery (AFVR) events to remove residual free-phase product and reduce concentrations of chemicals of concern (CoC). Please have your contractor conduct one event on monitoring/recovery well cluster MW-1A, MW-8, and MW-60, one event on monitoring/recovery well cluster MW-54, MW-62, and MW-64, one event on monitoring/recovery well cluster MWR-1 and MW-66, and one event on monitoring/recovery well cluster MW-51 and MW-67. The events may be conducted on consecutive days. Off-gas treatment will be necessary.

Cost Agreement #39531 has been approved in the amount shown on the enclosed cost agreement form for the AFVR events. AFVR activities may proceed immediately upon receipt of this letter. The report submitted at the completion of the events should include the following items:

- A narrative portion documenting each AFVR event noting site conditions, the name of the AFVR contractor, field personnel, date, time the AFVR event started and ended, ambient air temperature, and general weather conditions.
- A brief description of the completed work scope and any relevant descriptions pertaining to the data tables.
- A table summarizing the airflow (in CFM) and volatile air emissions concentrations collected from the stack of the truck every thirty minutes through the duration of each event or for one eight-hour period per day for each extended event. The table shall also document which well(s) were being recovered from during that time interval.
- A table summarizing magnehelic gauge measurements on a thirty-minute time interval through the duration of each event or for one eight-hour period per day for each extended event. The gauges must be installed on the extraction well(s) and immediately surrounding wells.

- The total volume of water recovered in gallons.
- The total volume of free-phase product recovered in gallons (typically measured with a product/water interface device inserted into the top of the tanker at the completion of each event and then converted to an approximate volume).
- The total weight of petroleum removed as vapor in pounds. This is calculated based on the airflow rate and the concentration of vapor.
- A table documenting the free-product thickness in each well before and after each AFVR event.
- A scaled base map depicting the location of the extraction wells and the surrounding wells equipped with magnehelic gauges.

The drop tube or "stinger" should initially be installed six inches below the free-phase product or installed at the water table interface if free-phase product is not present. After the first two hours of the AFVR event, the depth of the stinger should be adjusted to obtain the highest petroleum vapor recovery. The depth should be periodically readjusted throughout the event to maintain maximum vapor recovery. Groundwater recovery should not exceed four gallons per minute at any time during the event. The overall goal is to maximize the recovery of free-phase product and petroleum vapors in the capillary fringe and minimize the recovery of groundwater.

Bunnell-Lammons can submit an invoice for direct billing from the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Please note that all applicable South Carolina certification requirements apply to the laboratory services, well installation, and report preparation. All site rehabilitation activities must be performed and submitted by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor.

An AFVR report and invoice are due within 90 days from the date of this letter. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Department for the cost to be paid. SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The Division grants pre-approval for transportation of up to 5,000 gallons of free-phase product and petroleum-contaminated groundwater from the referenced facility to a permitted treatment facility. The product and groundwater must be properly stored in labeled containers and must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report.

On all correspondence concerning this facility, please reference UST Permit #06742. If there are any questions concerning this project, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

BLE Project No. J10-6940-02

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander of the Former Crossroads Grocery, Bunnell-Lammons Engineering, Inc. (BLE) has completed four aggressive fluid vapor recovery events (AFVRs) at the subject site. This scope of work was performed in response to South Carolina Department of Health and Environmental Control's (SCDHEC) directive, dated September 14, 2010. The results of our activities are provided herein. Please feel free to contact us if you have any questions concerning this report.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

PROJECT INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Various environmental assessments have been conducted at the site by other consultants since 1993, including the installation of seventy-two groundwater monitoring wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally, petroleum free-product recovery has been conducted via numerous aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property.

In a directive dated September 14, 2010, SCDHEC required additional AFVR events be performed at the site, to remove residual free-phase product and to reduce concentrations of dissolved chemicals of concern (CoCs). AFVR events were to be conducted on monitoring wells in clusters: MWR-1A, MW-8, MW-60 (cluster 1), MW-54, MW-62, and MW-64 (cluster 2), MWR-1 and MW-66 (cluster 3), and MW-51 and MW-67 (cluster 4). The results of the AFVR events are documented in this report.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #1 – SEPTEMBER 22, 2010

On September 22, 2010, the first 8-hour AFVR event was conducted in monitoring wells MW-51 and MW-67. The AFVR event was performed by Landprobe Drilling Services of Greenville, South Carolina (Landprobe) and a geologist from BLE was on site for observation and monitoring. Prior to initiating the event, BLE personnel gauged the monitoring wells using a Solinst® Interface Meter

Model 122. Approximately 1.67 feet (MW-51) and 0.82 feet (MW-67) of petroleum free-product was detected in the wells prior to initiating the AFVR (Figure 2). Additionally, the initial depth to free-product/groundwater in adjacent monitoring wells MWR-1, MW-65, and MW-66 were measured (feet below top of PVC casing (btoc)) and recorded on Table 1.

The AFVR event was initiated at 0930 and concluded at 1730. The general weather conditions observed during this period of time were clear; winds varied between 2 and 13 mph with an ambient temperature between 72° and 93° Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum ranging from 20 to 22 inches of mercury was applied to MW-51 and MW-67. In addition to collecting vacuum readings, the depth to water (feet btoc) was measured every 30 minutes in MWR-1, MW-65, and MW-66, to evaluate drawdown. Gauging data observed during the event is shown in Table 1.

Due to the close proximity of the site to a populated area, volatile air emissions were treated on-site by Landprobe personnel utilizing a granulated activated carbon (GAC) unit. Influent and effluent vapor concentrations were measured every 30 minutes throughout the event using a MiniRAE® 2000 Photo Ionization Detector (PID). The observed vapor concentrations are shown in Table 1.

At the completion of the AFVR event, a total volume of 1,249 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 4.40 pounds of gasoline vapor which is equivalent to approximately 0.70 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 1A.

The AFVR wells were gauged immediately following the conclusion of the event and 0.01 feet of free-product was observed in MW-67. Free-phase product was not detected in MW-51. Total free-product/water level changes for this event are shown in Table 1.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #2 – SEPTEMBER 23, 2010

On September 23, 2010, the second 8-hour AFVR event was conducted in monitoring wells MWR-1 and MW-66. The AFVR event was performed by Landprobe and a geologist from BLE was on site for observation and monitoring. Approximately 0.04 feet (MWR-1 and MW-66) of free-product was detected in each well prior to initiating the AFVR event (Figure 2). Additionally, the initial depth to free-product/groundwater in adjacent source area wells MW-1, MW-17, and MW-51 were measured (feet btoc) and recorded on Table 2.

The AFVR event was initiated at 1100 and concluded at 1900. The general weather conditions observed during this period of time were cloudy to overcast; winds varied between 1 and 9 mph with an ambient temperature between 70° and 93° Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum ranging from 20 to 24 inches of mercury was applied to MWR-1 and MW-66. In addition to collecting vacuum readings, the depth to free-product/groundwater (feet btoc) was measured every 30 minutes in MW-1, MW-17, and MW-51 to evaluate drawdown. Gauging data observed during the event is shown in Table 2.

Due to the close proximity of the site to a populated area, volatile air emissions were treated on-site by Landprobe personnel utilizing a GAC unit. Influent and effluent vapor concentrations were measured every 30 minutes throughout the event using a MiniRAE® 2000 PID. The observed vapor concentrations are shown in Table 2.

At the completion of the AFVR event, a total volume of 662 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate

free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 6.39 pounds of gasoline vapor which is equivalent to approximately 1.02 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 2A.

The AFVR monitoring wells were gauged immediately following the conclusion of the event and 0.01 feet of free-phase product was observed in monitoring wells MWR-1 and MW-66. Total free-product/water level changes for this event are shown in Table 2.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #3 – SEPTEMBER 24, 2010

On September 24, 2010, the third 8-hour AFVR event was conducted in monitoring wells MW-54, MW-62, and MW-64. The AFVR event was performed by Landprobe and a geologist from BLE was on site for observation and monitoring. Approximately 0.69 feet (MW-54), 0.02 feet (MW-62), and 0.24 feet (MW-64) of free-product was detected in the wells prior to initiating the AFVR event (Figure 2). Additionally, the initial depth to free-product/groundwater in adjacent source area wells MW-7, MW-7R, and MW-63 were measured (feet btoc) and recorded on Table 3.

The AFVR event was initiated at 1030 and concluded at 1830. The general weather conditions observed during this period of time were mostly cloudy with scattered showers; winds varied between 2 and 9 mph with an ambient temperature between 80° and 81° Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum ranging from 20 to 22.5 inches of mercury was applied to MW-54, MW-62, and MW-64. In addition to collecting vacuum readings, the depth to free-product/groundwater (feet btoc) was measured every 30 minutes in wells MW-7, MW-7R and MW-63 to evaluate drawdown. Gauging data observed during the event is shown in Table 3.

Due to the close proximity of the site to populated area, volatile air emissions were treated on-site by Landprobe personnel utilizing a GAC unit. Influent and effluent vapor concentrations were

measured every 30 minutes throughout the event using a MiniRAE® 2000 PID. The observed vapor concentrations are shown in Table 3.

At the completion of the AFVR event, a total volume of 1,236 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 2.61 pounds of gasoline vapor which is equivalent to approximately 0.42 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 3A.

The AFVR monitoring wells were gauged immediately following the conclusion of the event and 0.01 feet of free-phase product was observed in MW-54, MW-62, and MW-64. Total free-product/water level changes for this event are shown in Table 3.

AGGRESSIVE FLUID VAPOR RECOVERY EVENT #4 – SEPTEMBER 27, 2010

On September 27, 2010, the fourth 8-hour AFVR event was conducted in monitoring wells MW-MWR-1A, MW-8, MW-60, and MW-61. The AFVR event was performed by Landprobe and a geologist from BLE was on site for observation and monitoring. Approximately 0.09 feet (MWR-1A), 0.20 feet (MW-8), and 0.30 feet (MW-60) of free-product was detected in the monitoring wells prior to conducting the AFVR event (Figure 2). Monitoring well MW-61 was dry prior to initiating the AFVR event. Additionally, the initial depth to free-product/groundwater in adjacent source area well MW-1(feet btoc) was measured and recorded on Table 4.

The AFVR event was initiated at 1130 and concluded at 1930. The general weather conditions observed during this period of time were mostly overcast with scattered showers, winds varied

between 6 and 31 mph with an ambient temperature between 59° and 75° Fahrenheit. Throughout the duration of the AFVR event, a continuous vacuum ranging from 19 to 20.5 inches of mercury was applied to MWR-1A, MW-8, MW-60, and MW-61. In addition to collecting vacuum readings, the depth to free-product/groundwater (feet btoc) was measured every 30 minutes in well MW-1 to evaluate drawdown. Gauging data observed during the event is shown in Table 4.

Due to the close proximity of the site to a populated area, volatile air emissions were treated on-site by Landprobe personnel utilizing a GAC unit. Influent and effluent vapor concentrations were measured every 30 minutes throughout the event using a MiniRAE® 2000 PID. The observed vapor concentrations are shown in Table 4.

At the completion of the AFVR event, a total volume of 1,043 gallons of petroleum impacted groundwater was determined to have been recovered from the site. No free-phase product was measured in the holding tanks at the end of the AFVR event. Petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 4.94 pounds of gasoline vapor which is equivalent to approximately 0.79 gallons of gasoline, were calculated to have been recovered during the AFVR event. The AFVR emissions calculations for this event are provided as Table 4A.

The AFVR monitoring wells were gauged immediately following the conclusion of the event and 0.07 feet of free-phase product was observed in MW-8, 0.01 feet of free-phase product was observed in MW-60, and 0.56 feet of free-phase product was observed in MW-61. Total free-product/water level changes for this event are shown in Table 4.

RECOMMENDATIONS

On October 11, 2010, BLE personnel mobilized to the site to measure free-product levels in MWR-1A, MWR-1, MW-7, MW-8, MW-51, MW-54, and MW-60 through MW-67. The results of our findings are shown on Table 5.

The AFVR events have been successful at reducing free-product thicknesses in the monitoring wells; however, free-product is still present in MW-7, MW-8, MW-51, MW-54, and MW-60 through MW-67. In an effort to fully define the extent of the free-product plume and to provide maximum coverage for free-product recovery, we recommend the installation of three additional recovery wells (MW-68, MW-69, and MW-70) to serve as supplemental AFVR extraction points. The wells should be installed at the midpoints of the existing well clusters to evaluate free-product thicknesses in these areas (Figure 3). Additionally, the wells should be installed with 20-foot (minimum) well screens to provide maximum vapor removal from the vadose zone. After installation of the new wells, we recommend a series of five additional 8-hour AFVR events be conducted to 1) remove residual free-phase product from the area around the extraction points, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum impacted groundwater from the subsurface. We recommend performing additional AFVRs in the following well combinations:

- MWR-1A, MW-8, and MW-60;
- MW-61 and MW-68 (proposed);
- MW-54, MW-62, and MW-64;
- MWR-1, MW-68 (proposed), and MW-69 (proposed);
- MW-51, MW-66, and MW-67.

The AFVR events should be performed in each well group, on consecutive days. Free-product levels will be gauged approximately 15 days after the fifth AFVR event to evaluate progress. This data will be presented in our findings.

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

Total Pounds of Carbon Recovered as Emissions: **4.27**

Total Pounds of Gasoline Recovered as Emissions: **4.94**

Total Gallons of Gasoline Recovered as Emissions: **0.79**

NOTES:

AFVR event performed on September 27, 2010
Vacuum applied to monitoring wells MW-1A, MW-8, MW-60, and MW-61
0 09 feet (MWR-1A), 0 20 feet (MW-8), and 0 30 feet (MW-60) of free-product was detected prior to AFVR event
Vapor concentrations measured using a portable MiniRAE® 2000 Photo-Ionization Detector (PID)
inches of Hg - inches of mercury
ppm - parts per million
Q_{std} - flow at DSCFM
DSCFM - Dry Standard Cubic Feet per Minute
PPM_d - "dry" concentration

PPM_c - volumetric concentration of VOC emissions as carbon, dry basis, at STP
K - number of carbons in calibration gas
C_{cm} - mass concentration of VOC emissions as carbon
PMR_c - pollutant mass removal of VOCs as carbon
PMR_g - pollutant mass removal of VOCs as gasoline
B_{wm} - lb of water per lb of dry air
B_{ws} - water vapor % by volume
Calculations have been derived from published guidance

Re: QAPP Contractor Addendum
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742
Release reported January 11, 1993
Aggressive Fluid and Vapor Recovery report received November 8, 2010
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) recognizes your commitment to continue work at this site using Bunnell-Lammons Engineering as your contractor. The next scope of work is monitoring/recovery well installation as outlined in the UST Quality Assurance Program Plan (QAPP). Please have your contractor install three additional monitoring/recovery wells in accordance with the QAPP and in compliance with all applicable regulations. The wells should be installed at the locations proposed by your contractor in the referenced report. A copy of the QAPP is available at http://www.dhec.sc.gov/environment/lwm/pubs/DHEC%20UST%20QAPP_Rev-1_Feb2011_3.pdf.

Your contractor must complete and submit a QAPP Contractor Addendum and cost agreement for the aforementioned scope of work within 30 days of the date of this letter. Upon review and approval of the Addendum and cost agreement, the Division will issue a directive to you for the work.

On all correspondence concerning this site, please reference UST Permit #06742. If there are any questions, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

Subject: **QAPP Addendum**
Former Crossroads Grocery
8050 West Oak Highway
Westminster, South Carolina
SCDHEC UST Permit #06742
BLE Project No. J11-6940-03

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) submits herein the completed Quality Assurance Program Plan (QAPP) addendum for the subject site. This submittal is in response to SCDHEC's QAPP addendum request dated July 15, 2011, for the installation of three additional groundwater monitoring/recovery wells at the subject site. Upon approval from SCDHEC, additional copies of the QAPP addendum will be distributed to the parties listed in section A3.

Please do not hesitate to contact us if you have any questions concerning this submittal.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

Table 2A Addendum Role Identification and Contact Information

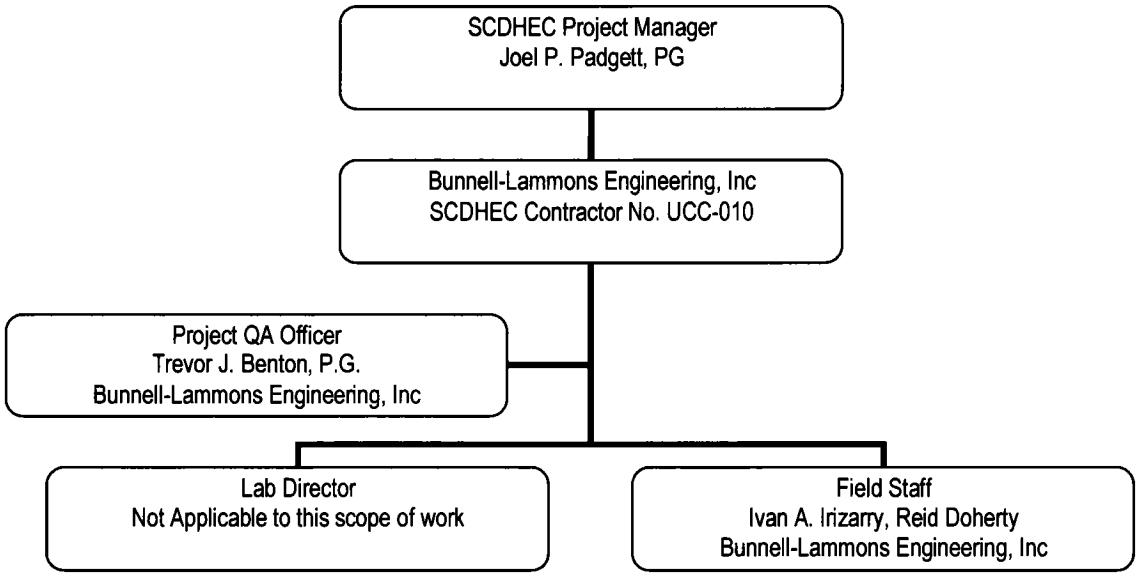

Figure 1A Organizational Chart

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Various environmental assessments have been conducted at the site by other consultants since 1993, including the installation of seventy-two groundwater monitoring wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally, petroleum free-product recovery has been conducted via numerous aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property. Historically, a downgradient spring has been impacted by the documented release. The purpose of this scope of work is to install three additional monitoring/recovery wells to be utilized as extraction points for continued free-product removal at the site.

Please answer the following: Does this project fall under UST or Brownfields area?

UST Division (UST Permit #06742)

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

   Installation of three additional monitoring/recovery wells (MW-68, MW-69, and MW-70).

2. ***The work will begin within <u>two weeks</u> after cost approval and the project should be <u>completed within 60 days</u>.***

3. ***Are there any time or resource constraints? Include those factors that may interfere with the tentative schedule.***

   Utility clearance and drill rig availability are potential time constraints for this project.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

Detail the geographical area that is to be part of the project. Maps should be included to show not only the topography and the geographical area of the State, but also to show more detail of the site itself including property lines.

See attached Figures 1 and 2

A8 Training and Certificates

Required training and licenses:

Title/Job	Name	Training Required	Date training received	Type of License	License Number
Hydrogeologist	Thomas Lammons, P.G.			SC Professional Geologist	#893
Hydrogeologist	Trevor Benton. P.G.			SC Professional Geologist	#2395
Hydrogeologist	Thomas Lammons, Trevor Benton, Ivan Irizarry, Reid Doherty	40-hour OSHA HAZWOPER & 8-Hour refresher	2/11/11		
Well Driller	Marty King	40-hour OSHA HAZWOPER & 8-Hour refresher	2/11/11	SC Well Driller	#1089

Table 3A Required Training and Licenses

Thomas Lammons, P.G. of Bunnell-Lammons Engineering, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location: Bunnell-Lammons Engineering, Inc., Human Resources Department Files c/o Ms. Esther Lande

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project:

Commercial Lab(s)

Final Report	BLE personnel	Hardcopy & Electronic	BLE file library and electronic data storage backup. Hard copy storage for a minimum of 3 years.	After 3 years, the project data may be scanned and transferred to CD. CDs will be archived in BLEs file library.

Table 4A Record Identification, Storage, and Disposal

Section B Measurement/Data Acquisition

B1 Sampling Process/Experimental Design

Item	Start Date	End Date	Comments
Well Drilling	August 15, 2011	August 16, 2011	Three monitoring/recovery wells installed to 45 feet below ground surface with 20 foot screens. See SOP Attachment for procedures for installing monitoring/recovery wells.
Well Development	August 16, 2011	August 16, 2011	Purge a minimum of three well volumes to remove fine-grained sediments from the well screen and filter pack.
Comprehensive Site/Well Survey	August 31, 2011	September 1, 2011	Perform comprehensive site survey to incorporate all new and existing monitoring/recovery wells on one site map. Survey results will be tied into the State Plane Coordinate System.

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil N/A

Ground Water from monitoring wells N/A

From Drinking/Irrigation water wells N/A

From surface water features N/A

Total number of Water samples N/A

The samples will be (check as many as apply): ____Homogenized ____Split

If any of the above are circled please indicate how will it be done and the equipment needed.

Not Applicable

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

Drilling rods and equipment will be decontaminated (high pressure steam-cleaning) prior to mobilizing to the site. Additionally, all drill rods will be properly decontaminated after each boring location and prior to leaving the site.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

A decontamination pad will be established on-site. Soil cuttings and drilling decontamination fluids will be contained and transferred to steel 55-gallon drums, which will be staged on-site for proper disposal. High pressure steam-cleaning will be utilized as the decontamination procedure.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

Equipment: Schramm T450S air rotary drill rig
Soil/Water Disposal Contractor: A&D Environmental – 1741 Calks Ferry Road, Lexington, SC
Surveyor: Souther Land Surveying – 10253 Asheville Highway, Inman, SC (SC PLS #21232)

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Property Access	Notify SCDHEC PM of failure to receive property access.	Telephone record/email correspondence to SCDHEC placed in project file.	Trevor J. Benton, P.G.
Drill rig breakdown	Make repairs in field or get replacement drilling equipment.	Field notes placed in project file.	Trevor J. Benton, P.G.
Well location inaccessibility – power lines or other utilities	Move well within 5 feet of proposed boring location. Notify SCDHEC PM if location is still not accessible.	Field notes placed in project file. Telephone record/email (if applicable) to SCDHEC placed in project file.	Trevor J. Benton, P.G.

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

   Not Applicable to this scope of work.

2. ***How will the contactors cool the samples and keep the samples cool?***

   Not Applicable to this scope of work.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

   Not Applicable to this scope of work.

4. ***Where will the samples be stored in the Lab once they are received?***

   Not Applicable to this scope of work.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

   Not Applicable to this scope of work.

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Not Applicable to this scope of work.

Parameter	SOP ID*	Method Referenced	Equipment	Comments

Table 7A Analytical SOPs and Referenced Methods

- **This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

Abbreviation	Lab Identification of this SOP	Full Name of the SOP

Table 8A SOP Abbreviation Key

2. **Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:** Not Applicable to this scope of work.

Failure	Response	Documented Where?	Individual Responsible

Table 9A Corrective Action Procedures

3. **Identify sample disposal procedures.** Not Applicable to this scope of work.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments

Table 10A Sample Disposal

4. **Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).**

   Not Applicable to this scope of work.

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. **Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Not the availability and location of spare parts.**

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
MiniRae 3000 Photo-Ionization Detector	592-903471	Filter inspection and lamp cleaning	Filter inspection – Daily Lamp Cleaning – Monthly or as needed	Filters, calibration gases, and lamp cleaning supplies - available at Pine Environmental Services, Inc. in Lilburn, GA	Ivan Irizarry
Heron little dipper water level indicator	18816	Indicator probe cleaning	Daily	Replacement probe – available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry
Solinst Interface Meter - Model 122	122 007909-1	Indicator probe cleaning	Daily	Replacement probe – available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
MiniRae 3000 Photo-Ionization Detector 592-903471	Filter inspection and lamp cleaning	Inspect filter for dust, moisture, and/or debris. Inspect lamp for moisture or smudges.	Ivan Irizarry	Clean/replace PID filter and/or lamp

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. **Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.**
2. **Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.**
3. **Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.**

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
MiniRae 3000 Photo-Ionization Detector	Zero gas calibration and span gas calibration.	Daily	Verify span gas calibration against 100 ppm isobutylene	Raise or lower span gas output value to match span gas concentration.	Ivan Irizarry	*MiniRae 3000 Volatile Organic Compound Detector Calibration Procedures*

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. **Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.**
2. **Identify the individual(s) responsible for this.**

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
Leather work gloves	Grainger	New or in good condition (if previously used) with no tears	Store away from direct sunlight in work vehicle	Ivan Irizarry
Latex gloves	Eon Products	New material	Store in clean supply room located at BLE office	Ivan Irizarry

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. **Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.**
2. **Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.**
3. **Indicate the acceptance criteria for these data sources and/or models.**

Data Source	Used for	Justification for use in this project	Comments
Drawing titled "Site Features" by Midlands Environmental Consultants Inc., dated September 2, 2008	Site map with existing well locations installed by others	Site map utilized for placement of proposed monitoring/recovery well locations	

Table 15A Non-Direct Measurements

4. **Identify key resources/support facilities needed.**

   Not applicable to this scope of work.

B10 Data Management

1. **Describe the data management scheme from field to final use and storage.**

   Not Applicable to this scope of work.

2. **How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?**

   Not applicable to this scope of work.

3. **How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted.**

   Not applicable to this scope of work.

4. **How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).**

   Not applicable to this scope of work.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. ***The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?***

   Internal field audits will be performed on a daily basis by Trevor Benton, P.G. of Bunnell-Lammons Engineering, Inc. If any significant problems or deviations from the QAPP are noted, work may be stopped to resolve the issues. The SCDHEC project manager will be notified of the issues within 24 hours of the occurrence.

2. ***The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?***

   Not applicable to this scope of work.

C2 Reports to Management

See the SC DHEC UST Programmatic QAPP (UST Master QAPP).

STANDARD OPERATING PROCEDURES

BLE

MINIRAE 3000 VOLATILE ORGANIC COMPOUND (VOC) DETECTOR CALIBRATION PROCEDURES

The calibration of the MiniRae 3000 (MiniRae) is a two point process using fresh air and a standard reference gas or span calibration. The fresh air calibration is performed by exposing the meter probe to a zero point gas or fresh air (0.0 parts per million (ppm)). The secondary calibration or span calibration is performed by exposing the probe to a standardized gas. Choices of calibration gases are available, but for our calibration purposes a gas cylinder of 100 ppm isobutylene is utilized.

Fresh Air (Zero) Calibration

The fresh air calibration on the MiniRae is performed by exposing the sensor to a fresh air source without trace concentrations of VOCs (reading of 0.0 ppm). The probe is exposed for approximately 30 seconds to the fresh air gas or clean ambient air. Once completed the sensor automatically updates the internal database and displays the appropriate fresh air calibration reading.

Span Calibration

For the second point calibration a standard cylinder of gas is connected to a >500 cubic centimeter per minute (cc/min) flow monitoring regulator with an attached coupling tube for the probe. Span values in the MiniRae are present for the appropriate gas. The gas is applied to the probe for approximately 30 seconds. After exposure to the span gas, the concentration readings should be within three ppm of the span gas concentration.

BLE

MONITORING/RECOVERY WELL CONSTRUCTION PROCEDURES

Type II Well

Type II groundwater monitoring/recovery wells are constructed of 4-inch diameter, Schedule 40 polyvinyl chloride (PVC) casing with flush-threaded joints installed in a 10-inch nominal diameter borehole utilizing air-rotary drilling equipment. The bottom 20-foot section of each well will be a manufactured well screen with 0.010-inch wide machined slots. The well screen will be installed to the depth of the boring (approximately 45 feet below ground surface) and will bracket the water table.

General

In Type II wells, a washed sand filter pack is emplaced around the outside of the pipe from the bottom of the well casing to at least 2 feet above the top of the well screen. The sand filter pack is used to stabilize the formation and to help yield a less turbid groundwater sample.

An approximate two-foot thick (minimum) bentonite seal is installed on top of the sand filter pack to seal the monitoring well at the desired level. The well annulus was then grouted to the surface with a cement/bentonite grout mixture. A lockable PVC cap and a steelbolted manhole cover is secured over each well in a two-foot by two-foot concrete pad.

Re: Required revision of QAPP Addendum
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742
Release reported January 11, 1993
Quality Assurance Project Plan (QAPP) Addendum received August 8, 2011
E-mail sent August 17, 2011 to Bunnell-Lammons regarding QAPP Addendum revisions
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced QAPP Addendum and is providing specific comments on the enclosed QAPP Addendum Checklist. A revised QAPP Addendum that addresses the comments is due on or before August 31, 2011.

On all correspondence concerning this facility, please reference UST Permit #06742. If there are any questions, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist
Corrective Action Section

UST CONTRACTORS QA PROJECT PLAN REVIEW CHECKLIST

Site Name: Former Crossroads Grocery
Permit #: 06742

Author: Bunnell-Lammons Engineering, Inc.
Reviewer: J. Padgett, P.G., SCDHEC

Date Submitted for Review: 8/8/2011
Date of Review: 8/17/2011

Element	Acceptable (Yes/No/NA)	Comments
A1. Title and Approval Sheet		
Contains project name or site and UST permit number	Y	
Indicates Site location-address, city and state	Y	
Contractor's name is given as well as the preparer's name	Y	
Dated signature of SC DHEC project manager	No	SC DHEC project manager will sign revised/approved QAPP Addendum.
Dated signature of organization's QA manager present	Y	
Dated signature Laboratory Director	N/A	
Other Signatures as required (sub-contracted Lab Directors for instance).	N/A	
A2. Table of Contents		
Lists QA Project Plan information sections	No	No table of contents.
Document control information indicated	No	No right header with site information.
A3. Distribution List		
Includes all individuals who are to receive a copy of the QA Project Plan and identifies their organization	Y	
Includes the SC DHEC Project Manager, all Laboratories that will be used in this project, field manager, the well driller, and the Site Rehabilitation Contractor at a minimum.	Y	
A4. Project/Task Organization		
Identifies key individuals involved in all major aspects of the project, including contractors, project verifiers, validators, and lab directors.	Y	
Discusses their responsibilities	Y	
Identifies individual responsible for maintaining the official, approved QA Project Plan	Y	
Organizational Chart is present and the Project QA Manager position indicates independence from unit generating data	N	Field Manager and QA Manager are same person.
Organizational chart shows lines of authority and reporting responsibilities	N	Bunnell-Lammons Manager not identified on organizational chart (box on flow chart immediately beneath DHEC Project Manager).
A5. Problem Definition/Background		
The background and history of the site is given.	Y	
Indicates why this site is being assessed.	Y	
Indicates whether the Project falls under UST or Brownfields	Y	
A6. Project/Task Description		
The QAPP summarizes what is known about the work to be done—in other words indicates what the Scope of this project is. See Master QAPP Section A6	Y	

UST CONTRACTORS QA PROJECT PLAN REVIEW CHECKLIST

Site Name: Former Crossroads Grocery
Permit #: 06742

Author: Bunnell-Lammons Engineering, Inc.
Reviewer: J. Padgett, P.G., SCDHEC

Date Submitted for Review: 8/8/2011
Date of Review: 8/17/2011

Element	Acceptable (Yes/No/NA)	Comments
Indicates when the work will be done once QAPP and cost approval is obtained and when the sampling is expected to be completed.	Y	
Discusses resource and time constraints, if applicable. If there are indicates how these may interfere with the tentative schedule.	Y	
A7. Quality Objectives and Criteria		
Details geographical locations to be studied, including maps where possible. Indicates property lines, wells, and other site details.	Y	
A8. Special Training/Certifications		
Identifies any project personnel specialized training or certifications	Y	
Discusses how this training will be provided	Y	
Indicates personnel responsible for assuring these are satisfied	Y	
Identifies where this information is documented	Y	
Provides the SC DHEC Environmental Laboratory Certification Number for all Labs including Subcontracted Labs.	N/A	
Indicates the parameters each lab will perform including method number and revision date for the method referenced in the Lab SOP for each parameter.	N/A	
EFIS indicates that the above labs are certified for all parameters to be used to make environmental decisions.	N/A	
A.9 Documentation and Records		
QAPP indicates the method in which each person on the distribution list will receive the most current copy of the QAPP.	Y	
Lists records pertinent to the project produced during the project by the contractor, labs, and subcontractors.	Y	
Indicates whether the records are hardcopies or electronic, and where they will be kept.	Y	
Identifies how long project information should be kept and this time period is not less than 5 years.	Y	
B1. Sampling Process Design (Experimental Design)		
The QAPP lists the schedule for project activities with approximated start and end dates.	No	Table does not list all project activities (i.e. QAPP Addendum preparation/approval, report preparation/submittal).
B2. Sampling Methods		
Indicates the locations of each sampling sites this can be on a map of the site).	N/A	
QAPP estimates the number of soil, groundwater, drinking water and surface water samples to be collected and gives the total number of expected samples.	N/A	

UST CONTRACTORS QA PROJECT PLAN REVIEW CHECKLIST

Site Name: Former Crossroads Grocery
Permit #: 06742

Author: Bunnell-Lammons Engineering, Inc. Date Submitted for Review: 8/8/2011
Reviewer: J. Padgett, P.G., SCDHEC Date of Review: 8/17/2011

Element	Acceptable (Yes/No/NA)	Comments
Indicates and equipment that will be needed for sampling (Geoprobes etc)	N/A	
Indicates and identify any support facilities that will be needed (Indicate what group will do the sampling and how the samples will get to the lab (Fed-Ex for instance); contractor to dig wells, contractor to run Geoprobe	N/A	
The QAPP indicates if the samples will be homogenized and/or split.	N/A	
If the samples are to be homogenized and/or split the QAPP indicates · How this will be done and · What equipment will be needed.	N/A	
Indicates is sampling equipment will be cleaned/decontaminated or whether all will be disposable.	Yes	
If the sampling equipment is to be cleaned, the QAPP gives · A detailed description of how this is done. · And how the by-products of cleaning will be disposed of	Yes	
If problems occur in the field the QAPP indicates: · What Corrective Actions will be taken · The Person responsible for taking action · Where the Corrective Action will be documented	Yes	
B3. Sample Handling and Custody		
Indicates how the samples will get to the lab in order to meet holding time requirements.	N/A	
Indicates how the contractors will cool the samples (ice, blue ice, refrigerator).	N/A	
Indicates how the lab will check the temperature of the samples upon receipt (temperature blank, IR Gun, etc)	N/A	
Describes the Chain of Custody (COC) procedure from collection to disposal of the samples (this can be an attached SOP).	N/A	
Includes a copy of the COC that will be used. If there are multiples labs with multiple COCs each COC that will be used is included.	N/A	
Indicates where the samples will be stored in the lab once received. This is for security purposes and can be a simple statement or in the COC SOP.	N/A	
B4. Analytical Methods		
The SOPs that will be used are matched with the parameters, the method that is referenced in that SOP, and the equipment that will be used to analyze the samples. If abbreviations are used, these are explained.	N/A	
The analytical methods that will be used match those required by the programmatic QAPP.	N/A

Reviewer: J. Padgett, P.G., SCDHEC Date of Review: 8/17/2011

Element	Acceptable (Yes/No/NA)	Comments
If problems occur in the lab the QAPP indicates: · What Corrective Actions will be taken · The Person responsible for taking action · Where the Corrective Action will be documented	N/A	
The schedule and method of sample disposal is indicated	N/A	
An SOP is attached for the Kerr Method or Ferrous Iron Method if they are to be used.	N/A	
B5. Quality Control –See programmatic QAPP		
B6. Instrument/Equipment Testing, Inspection, and Maintenance		
Each field and lab equipment needed periodic maintenance is listed, along with the schedule and the person responsible.	Yes	
The availability and location of spare parts for the above equipment is noted.	Yes	
Indicates the testing criteria for each lab or field instrument which is used to determine that the instrument is working properly.	Yes	
Indicates corrective action that will be done if deficiencies are noted, what re-inspections will be performed and how the corrective action and the results of the corrective action are documented.	Yes	
B7. Instrument/Equipment Calibration and Frequency		
Identifies equipment, tools, and instruments that should be calibrated and the frequency for this calibration	Yes	
Describes how calibrations should be performed and documented, indicating test criteria and standards or certified equipment	Yes	
Identifies how deficiencies should be resolved and documented and identifies the person responsible for corrective action.	Yes	
B8. Inspection/Acceptance for Supplies and Consumables		
Identifies critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials	No	PID calibration gasses not identified.
Identifies the individual(s) responsible for this	No	See comment above.
B9. Non-direct Measurements		
Identifies data sources, for example, computer databases or literature files, or models that should be accessed and used	Y	
Describes the intended use of this information and the rationale for their selection, i.e., its relevance to project	Y	
Indicates the acceptance criteria for these data sources and/or models	Y

SCDHEC UST Permit #06742
BLE Project No. J11-6940-03

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) submits herein the completed revised Quality Assurance Program Plan (QAPP) addendum for the subject site. This submittal is in response to SCDHEC's QAPP addendum request dated July 15, 2011, for the installation of three additional groundwater monitoring/recovery wells at the subject site. Upon approval from SCDHEC, additional copies of the QAPP addendum will be distributed to the parties listed in section A3.

Please do not hesitate to contact us if you have any questions concerning this submittal.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

Table 2A Addendum Role Identification and Contact Information

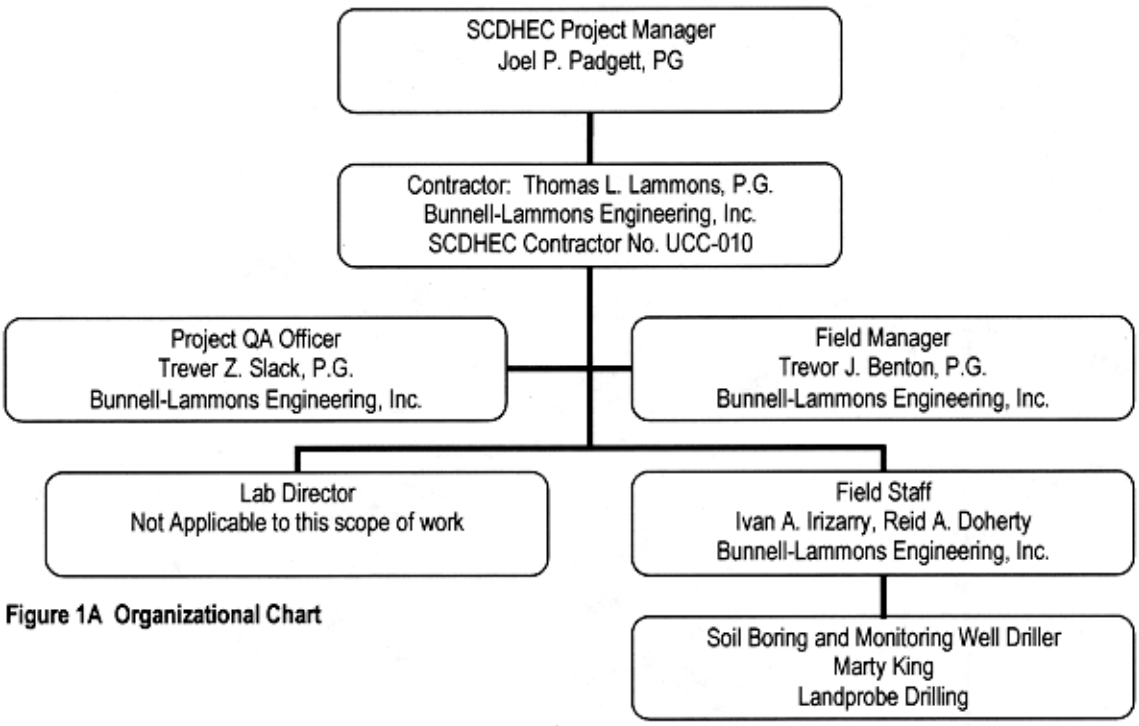

Figure 1A Organizational Chart

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Various environmental assessments have been conducted at the site by other consultants since 1993, including the installation of seventy-two groundwater monitoring wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally, petroleum free-product recovery has been conducted via numerous aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property. Historically, a downgradient spring has been impacted by the documented release. The purpose of this scope of work is to install three additional monitoring/recovery wells to be utilized as extraction points for continued free-product removal at the site.

Please answer the following: Does this project fall under UST or Brownfields area?

UST Division (UST Permit #06742)

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

   Installation of three additional monitoring/recovery wells (MW-68, MW-69, and MW-70).

2. ***The work will begin within <u>two weeks</u> after cost approval and the project should be <u>completed within 60 days</u>.***

3. ***Are there any time or resource constraints? Include those factors that may interfere with the tentative schedule.***

   Utility clearance and drill rig availability are potential time constraints for this project.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

Detail the geographical area that is to be part of the project. Maps should be included to show not only the topography and the geographical area of the State, but also to show more detail of the site itself including property lines.

See attached Figures 1 and 2

A8 Training and Certificates

Required training and licenses:

Title/Job	Name	Training Required	Date training received	Type of License	License Number
Hydrogeologist	Thomas Lammons, P.G.			SC Professional Geologist	#893
Hydrogeologist	Trevor Benton. P.G.			SC Professional Geologist	#2395
Hydrogeologist	Thomas Lammons, Trevor Benton, Trever Slack, Ivan Irizarry, Reid Doherty	40-hour OSHA HAZWOPER & 8-Hour refresher	2/11/11		
Well Driller	Marty King	40-hour OSHA HAZWOPER & 8-Hour refresher	2/11/11	SC Well Driller	#1089

Table 3A Required Training and Licenses

Thomas Lammons, P.G. of Bunnell-Lammons Engineering, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location: Bunnell-Lammons Engineering, Inc., Human Resources Department Files c/o Ms. Esther Lande

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project:

Commercial Lab(s)

Full Name of the Laboratory: Not applicable to this scope of work
Name of Lab Director:
SC DHEC Certification Number:
Parameters this Lab will analyze for this project:

Full Name of the Laboratory: Not applicable to this scope of work

B1 Sampling Process/Experimental Design

Item	Start Date	End Date	Comments
QAPP Addendum Preparation/Approval	August 4, 2011	August 24, 2011	Preparation dates include time for QAPP revisions.
Well Drilling	September 5, 2011	September 6, 2011	Three monitoring/recovery wells installed to 45 feet below ground surface with 20 foot screens. See SOP Attachment for procedures for installing monitoring/recovery wells.
Well Development	September 6, 2011	September 6, 2011	Purge a minimum of three well volumes to remove fine-grained sediments from the well screen and filter pack.
Comprehensive Site/Well Survey	September 12, 2011	September 13, 2011	Perform comprehensive site survey to incorporate all new and existing monitoring/recovery wells on one site map. Survey results will be tied into the State Plane Coordinate System.
Report Preparation/Review/Submittal	October 3, 2011	October 14, 2011	Report preparation, review, and submittal dates are contingent on completion of all required project activities. Date may be subject to change.

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil	N/A
Ground Water from monitoring wells	N/A
From Drinking/Irrigation water wells	N/A
From Surface Water features	N/A
Total number of Water samples	N/A

The samples will be (check as many as apply): ____Homogenized ____Split

If any of the above are circled please indicate how will it be done and the equipment needed.

Not Applicable

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

Drilling rods and equipment will be decontaminated (high pressure steam-cleaning) prior to mobilizing to the site. Additionally, all drill rods will be properly decontaminated after each boring location and prior to leaving the site.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

A decontamination pad will be established on-site. Soil cuttings and drilling decontamination fluids will be contained and transferred to steel 55-gallon drums, which will be staged on-site for proper disposal. High pressure steam-cleaning will be utilized as the decontamination procedure.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

Equipment: Schramm T450S air rotary drill rig
Soil/Water Disposal Contractor: A&D Environmental – 1741 Calks Ferry Road, Lexington, SC
Surveyor: Souther Land Surveying – 10253 Asheville Highway, Inman, SC (SC PLS #21232)

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Property Access	Notify SCDHEC PM of failure to receive property access.	Telephone record/email correspondence to SCDHEC placed in project file.	Trevor J. Benton, P.G.
Drill rig breakdown	Make repairs in field or get replacement drilling equipment.	Field notes placed in project file.	Trevor J. Benton, P.G.
Well location inaccessibility – power lines or other utilities	Move well within 5 feet of proposed boring location. Notify SCDHEC PM if location is still not accessible.	Field notes placed in project file. Telephone record/email (if applicable) to SCDHEC placed in project file.	Trevor J. Benton, P.G.

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

   Not Applicable to this scope of work.

2. ***How will the contactors cool the samples and keep the samples cool?***

   Not Applicable to this scope of work.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

   Not Applicable to this scope of work.

4. ***Where will the samples be stored in the Lab once they are received?***

   Not Applicable to this scope of work.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

   Not Applicable to this scope of work.

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Not Applicable to this scope of work.

Parameter	SOP ID*	Method Referenced	Equipment	Comments

Table 7A Analytical SOPs and Referenced Methods

- This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.

Abbreviation	Lab Identification of this SOP	Full Name of the SOP

Table 8A SOP Abbreviation Key

2. **Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:** Not Applicable to this scope of work.

Failure	Response	Documented Where?	Individual Responsible

Table 9A Corrective Action Procedures

3. **Identify sample disposal procedures.** Not Applicable to this scope of work.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments

Table 10A Sample Disposal

4. **Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).**

   Not Applicable to this scope of work.

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. **Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Not the availability and location of spare parts.**

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person responsible
MiniRae 3000 Photo-Ionization Detector	592-903471	Filter inspection and lamp cleaning	Filter inspection – Daily Lamp Cleaning – Monthly or as needed	Filters, calibration gases, and lamp cleaning supplies - available at Pine Environmental Services, Inc. in Lilburn, GA	Ivan Irizarry
Heron little dipper water level indicator	18816	Indicator probe cleaning	Daily	Replacement probe – available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry
Solinst Interface Meter - Model 122	122 007909-1	Indicator probe cleaning	Daily	Replacement probe – available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry

Table 11A Instrument and Equipment Maintenance

2. Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
MiniRae 3000 Photo-Ionization Detector 592-903471	Filter inspection and lamp cleaning	Inspect filter for dust, moisture, and/or debris. Inspect lamp for moisture or smudges.	Ivan Irizarry	Clean/replace PID filter and/or lamp

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. **Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.**
2. **Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.**
3. **Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.**

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
MiniRae 3000 Photo-Ionization Detector	Zero gas calibration and span gas calibration.	Daily	Verify span gas calibration against 100 ppm isobutylene	Raise or lower span gas output value to match span gas concentration.	Ivan Irizarry	*MiniRae 3000 Volatile Organic Compound Detector Calibration Procedures*

Table 13A Instrument Calibration Criteria and Corrective Action
*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. **Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.**
2. **Identify the individual(s) responsible for this.**

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking.
PID calibration gas	Pine Environmental	Canister of 100 ppm factory verified Isobutylene calibration gas	Store away from heat in padded protective case	Ivan Irizarry
Leather work gloves	Grainger	New or in good condition (if previously used) with no tears	Store away from direct sunlight in work vehicle	Ivan Irizarry
Latex gloves	Eon Products	New material	Store in clean supply room located at BLE office	Ivan Irizarry

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. **Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.**
2. **Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.**
3. **Indicate the acceptance criteria for these data sources and/or models.**

Data Source	Used for	Justification for use in this project	Comments
Drawing titled "Site Features" by Midlands Environmental Consultants Inc., dated September 2, 2008	Site map with existing well locations installed by others	Site map utilized for placement of proposed monitoring/recovery well locations	

Table 15A Non-Direct Measurements

4. **Identify key resources/support facilities needed.**

   Not applicable to this scope of work.

B10 Data Management

1. **Describe the data management scheme from field to final use and storage.**

   Field notes and logs will be stored in hardback bound field books and/or on standard 8 ½" x 11" field data sheets. Field data sheets are signed by field staff upon completion of daily work. Copies of field notes and driller 1903 forms are provided to the Field Manager on a daily basis and placed in the project file. Field boring logs are submitted to the BLE AutoCAD operator for boring log finalization. Digital copies of the final boring logs are kept on a backed-up digital file library.

2. **How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?**

   Copies of field notes and boring logs are reviewed by the Field Manager and placed in the project file. Additionally, field notes/logs are scanned, password secured, and placed into the digital project file. Original data sheets will also be kept by the field staff in field notebooks/folders for a minimum of three years.

3. **How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted.**

   Not applicable to this scope of work.

4. **How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).**

   Hard copies of final reports are contained in the specific project folder in BLE's file library. Additionally, each report is converted to digital format and stored in its applicable digital file folder. Hard copy storage will be for a minimum of three years. Digital storage will be indefinite. Digital data is backed-up on a weekly basis on a four month rolling schedule. For security purposes, current week data is stored at an off-site location. Additionally, data is backed-up and stored indefinitely at an off-site location on a biannual basis.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. ***The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. . Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?***

   Internal field audits will be performed on a daily basis by Trevor Benton, P.G. of Bunnell-Lammons Engineering, Inc. If any significant problems or deviations from the QAPP are noted, work may be stopped to resolve the issues. The SCDHEC project manager will be notified of the issues within 24 hours of the occurrence.

2. ***The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?***

   Not applicable to this scope of work.

C2 Reports to Management

STANDARD OPERATING PROCEDURES

MINIRAE 3000 VOLATILE ORGANIC COMPOUND (VOC) DETECTOR CALIBRATION PROCEDURES

The calibration of the MiniRae 3000 (MiniRae) is a two point process using fresh air and a standard reference gas or span calibration. The fresh air calibration is performed by exposing the meter probe to a zero point gas or fresh air (0.0 parts per million (ppm)). The secondary calibration or span calibration is performed by exposing the probe to a standardized gas. Choices of calibration gases are available, but for our calibration purposes a gas cylinder of 100 ppm isobutylene is utilized.

Fresh Air (Zero) Calibration

The fresh air calibration on the MiniRae is performed by exposing the sensor to a fresh air source without trace concentrations of VOCs (reading of 0.0 ppm). The probe is exposed for approximately 30 seconds to the fresh air gas or clean ambient air. Once completed the sensor automatically updates the internal database and displays the appropriate fresh air calibration reading.

Span Calibration

For the second point calibration a standard cylinder of gas is connected to a >500 cubic centimeter per minute (cc/min) flow monitoring regulator with an attached coupling tube for the probe. Span values in the MiniRae are present for the appropriate gas. The gas is applied to the probe for approximately 30 seconds. After exposure to the span gas, the concentration readings should be within three ppm of the span gas concentration.

BLE

MONITORING/RECOVERY WELL CONSTRUCTION PROCEDURES

Type II Well

Type II groundwater monitoring/recovery wells are constructed of 4-inch diameter, Schedule 40 polyvinyl chloride (PVC) casing with flush-threaded joints installed in a 10-inch nominal diameter borehole utilizing air-rotary drilling equipment. The bottom 20-foot section of each well will be a manufactured well screen with 0.010-inch wide machined slots. The well screen will be installed to the depth of the boring (approximately 45 feet below ground surface) and will bracket the water table.

General

In Type II wells, a washed sand filter pack is emplaced around the outside of the pipe from the bottom of the well casing to at least 2 feet above the top of the well screen. The sand filter pack is used to stabilize the formation and to help yield a less turbid groundwater sample.

An approximate two-foot thick (minimum) bentonite seal is installed on top of the sand filter pack to seal the monitoring well at the desired level. The well annulus was then grouted to the surface with a cement/bentonite grout mixture. A lockable PVC cap and a steelbolted manhole cover is secured over each well in a two-foot by two-foot concrete pad.

Re: Monitoring/recovery well installation directive
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; Cost Agreement #40533; MWA #UMW-23980
Release reported January 11, 1993
Quality Assurance Program Plan (QAPP) Addendum received August 22, 2011
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed and approved the referenced QAPP Addendum submitted by Bunnell-Lammons Engineering, Inc. Monitoring/recovery well installation and surveying as outlined in the Addendum may proceed immediately upon receipt of this letter. The installation must be conducted in accordance with the UST QAPP. A copy of the QAPP is available at http://www.dhec.sc.gov/environment/lwm/html/ust.htm.

Cost Agreement #40533 has been approved in the amount shown on the enclosed cost agreement form for the installation of three four-inch monitoring/recovery wells and site survey. The necessary monitoring well approval is enclosed. The wells should be installed with twenty-foot screens at the locations proposed in the QAPP Addendum. Please note that all applicable South Carolina certification requirements apply to the well installation and preparation of an assessment report. Further, all site rehabilitation activities must be performed and submitted by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor.

An assessment report and invoice are due within 90 days from the date of this letter. Bunnell-Lammons may directly bill the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the SCDHEC is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the

Department for the cost to be paid. SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The Division grants pre-approval for transportation of petroleum-contaminated, investigative-derived waste (IDW) from the referenced site to a permitted treatment/disposal facility. The transport and disposal must be conducted in accordance with the QAPP.

On all correspondence concerning this facility, please reference UST Permit #06742. If there are any questions concerning this project, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Monitoring Well Approval

Approval is hereby granted to:	Bunnell-Lammons Engineering, Inc.
(On behalf of):	Mr. Neil Alexander
Facility:	Former Crossroads Grocery
UST Permit Number:	06742
County:	Oconee

This approval is for the installation of three monitoring/recovery wells. The wells are to be installed in the approved locations in accordance with the South Carolina Well Standards, R.61-71, and the applicable guidance documents.

Please note that R.61-71 requires the following:

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.
3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
5. If any of the information provided to the Department changes, notification to Joel Padgett (tel: (803) 896-6398 or e-mail: padgetjp@dhec.sc.gov) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.
6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.
7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

UST Permit #06742; Cost Agreement #40533
BLE Project No. J11-6940-03

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) has completed the installation of three free-product recovery wells and performed a free-product gauging event at the subject site. This scope of work was performed in response to the South Carolina Department of Health and Environmental Control's (SCDHEC) letter dated September 2, 2011 and in accordance with BLE's Quality Assurance Project Plan (QAPP) Addendum dated August 18, 2011. This report describes the work performed and presents the results obtained, along with our comments and recommendations. Please do not hesitate to contact us if you have any questions concerning this report.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

BACKGROUND INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Various environmental assessments have been conducted at the site by other consultants since 1993, including the installation of seventy-two groundwater monitoring wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally, petroleum free-product recovery has been conducted via numerous aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property.

The purpose of this scope of work was to install three additional recovery wells to be utilized as extraction points for continued free-product removal at the site. Additionally, SCDHEC has required completion of a comprehensive site survey to include all groundwater monitoring/recovery wells associated with the site. This report documents the results of these activities.

RECOVERY WELL INSTALLATION

On September 28-29, 2011 BLE personnel and Landprobe Drilling (Landprobe) of Greenville, South Carolina (Marty King – SCWD #B1089) mobilized to the site to install three free-product recovery wells (MW-68, MW-69, and MW- 70). The borings were performed using a Schramm T450S drill rig employing an eight-inch diameter air rotary drill bit. The wells were installed in accordance with BLE's QAPP Addendum dated August 18, 2011.

Each recovery well consists of 4-inch ID, schedule 40 PVC casing with flush threaded joints with a 20-foot long manufactured well screen consisting of 0.010-inch wide machined slots. Each recovery well was installed to depths sufficient to bracket the water table. Standard filter sand pack, bentonite seal, and grout were installed to the ground surface. The wells were completed at the ground surface with an eight-inch diameter steel, bolted manhole cover secured in a two-foot by two-foot concrete pad. New recovery well locations are shown on Figure 2. Drilling procedures for the recovery wells are described in Appendix A.

Down-hole drilling equipment was decontaminated by steam cleaning prior to and after each use. Monitoring well installation details and boring logs are provided in Appendix A. New recovery well construction data is provided in Table 1. Drill cuttings and decontamination water generated during the installation of the monitoring wells were contained on-site in 55-gallon drums. These wastes were transported off-site for disposal. Waste transportation and disposal records are in Appendix B.

COMPREHENSIVE SURVEY AND FREE-PRODUCT GAUGING

Upon completion of the new recovery wells, a comprehensive site survey was completed by Souther Land Surveying (George B. Souther - PLS 21232) of Inman, South Carolina on November 29, 2011 to establish horizontal control and vertical elevations of pertinent site features and the top of PVC casings and ground surface of all monitoring/recovery wells associated with the site. Additionally, six remediation injection wells were located during the comprehensive site survey. These wells were identified as MW-1x through MW-6x, as the numbering system for the injection wells was unknown to BLE at the time of the comprehensive survey. A copy of the survey is provided as Figure 2.

On November 29, 2011, BLE personnel mobilized to the site to conduct free-product gauging. Twenty-seven monitoring and recovery wells (MWR-1, MWR-1A, MW-2, MWR-2, MW-3, MWR-3, MWR-4, MWR-4R, MW-6x, MW-7, MW-7R, MW-8, MW-24, MW-25, MW-51, MW-54, and MW-60 through MW-70) were gauged with a Solinst Interface Meter Model 122 for the presence of petroleum free-product. Free-product thicknesses ranged from 0.02 feet in MWR-1A to 3.82 feet in MW-69. No free-product was detected in monitoring wells MWR-3, MWR-4R, MW-7, MW-7R, MW-24, or MW-25, and monitoring wells MW-2, MW-3, and MW-4

were dry at the time of measurement. The depths to free-product and the groundwater table are provided on Figure 3. Additionally, a contour map depicting the free-product thicknesses in the gauged wells is shown on Figure 3.

CONCLUSIONS AND RECOMMENDATIONS

Three, four-inch diameter free-product recovery wells (MW-68, MW-69, and MW-70) have been installed in accordance with BLE's QAPP Addendum dated August 18, 2011. Upon installation of the new recovery wells, all wells associated with the site were incorporated into an updated comprehensive survey. Additionally, in an effort to identify the extent of the free-product plume, BLE personnel gauged 27 monitoring and recovery wells (MWR-1, MWR-1A, MW-2, MWR-2, MW-3, MWR-3, MWR-4, MWR-4R, MW-6x, MW-7, MW-7R, MW-8, MW-24, MW-25, MW-51, MW-54, and MW-60 through MW-70) for the presence of petroleum free-product. Measurable free-product was detected in 18 of the 27 gauged wells.

Since significant thicknesses of free-product are present in the subsurface at the facility, we recommend a long-term (96-hour) mobile multi-phase extraction (MMPE) event be conducted to 1) remove residual free-phase product from the area around the extraction points, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum impacted groundwater from the subsurface. We recommend performing the MMPE event on the following wells: MWR-1, MWR-2, MW-6x, MW-51, MW-65, and MW-67 (Figure 3).

Pursuant to conversations with SCDHEC, we understand ZAVA Industrial, Inc. (ZAVA) of Graham, North Carolina will be conducting a seminar on MMPE during the week of June 28, 2012. BLE has been in contact with ZAVA and has retained qualifications and a proposal for conducting the aforementioned MMPE event. An Assessment Component Cost Agreement based on State Underground Petroleum Environmental Response Bank (SUPERB) allowable rates is provided in Appendix C. Based on our current schedule and the schedule of ZAVA, the work can be completed after the week of July 2, 2012. Fieldwork will be completed within one week and a report of the MMPE event will be completed within 30 days following the event.

If SCDHEC is in agreement with this proposed scope of work, please contact us at your earliest convenience so that we may proceed with contractual arrangements with ZAVA.

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

APPENDICES

APPENDIX A

MONITORING WELL DRILLING PROCEDURES AND BORING LOGS

APPENDIX A

MONITORING WELL CONSTRUCTION PROCEDURES

Type II Recovery Well

Type II groundwater monitoring wells are constructed of 4-inch diameter, Schedule 40 PVC casing with flush-threaded joints installed in an 8-inch nominal diameter air hammered borehole. The bottom 20-foot section of each well is a manufactured well screen with 0.01-inch wide machined slots. The well screen was installed to the depth of the boring and bracketed the water table.

General

In Type II wells, a washed sand filter pack was emplaced around the outside of the pipe from the bottom of the well casing to at least 2 feet above the top of the well screen. The sand filter pack was used to stabilize the formation and to help yield a less turbid groundwater sample.

A two-foot thick (minimum) bentonite seal was installed on top of the sand filter pack to seal the monitoring well at the desired level. The well annulus was then grouted to the surface with a cement/bentonite grout mixture. A lockable PVC cap and a steel, bolted manhole cover was secured over the wells.

KEY TO SOIL CLASSIFICATIONS AND CONSISTENCY DESCRIPTIONS

BUNNELL-LAMMONS ENGINEERING, INC.
GREENVILLE, SOUTH CAROLINA

Penetration Resistance* Blows per Foot (SANDS)	Relative Density
0 to 4	Very Loose
5 to 10	Loose
11 to 20	Firm
21 to 30	Very Firm
31 to 50	Dense
over 50	Very Dense

Penetration Resistance* Blows per Foot (SILTS and CLAYS)	Consistency
0 to 2	Very Soft
3 to 4	Soft
5 to 8	Firm
9 to 15	Stiff
16 to 30	Very Stiff
31 to 50	Hard
over 50	Very Hard

*ASTM D 1586

Particle Size Identification

Boulder: Greater than 300 mm
Cobble: 75 to 300 mm
Gravel:
Coarse - 19 to 75 mm
Fine - 4.75 to 19 mm
Sand:
Coarse - 2 to 4.75 mm
Medium - 0.425 to 2 mm
Fine - 0.075 to 0.425 mm
Silt & Clay: Less than 0.075 mm

Re: MMPE directive
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; Cost Agreement #44059
Release reported January 11, 1993
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) recognizes your commitment to continue work at this site using Bunnell-LammonsEngineering, Inc. as your contractor. The next appropriate scope of work is to conduct a 48- hour Mobile Multiphase Extraction (MMPE) event on monitoring/recovery wells MWR-1, MWR-2, MW-6x, MW-51, MW-65, and MW-67 to remove free-phase product (FPP).

Cost Agreement #44059 has been approved in the amount shown on the enclosed cost agreement form for the MMPE event. MMPE activities may proceed immediately upon receipt of this letter, and must be performed by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor. All applicable South Carolina certification requirements apply to preparation of an MMPE report.

Bunnell-Lammons may directly bill the State Underground Petroleum Environmental Response Bank (SUPERB) Account. An invoice and MMPE report must be submitted to the Division within 60 days from the date of this letter. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available. Interim invoices for separate elements of the work scope may not be submitted.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Agency is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated costs must be pre-approved by the Agency for the costs to be paid. The Agency reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with

established criteria. Further, the Agency reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The Division grants pre-approval for transportation of petroleum-contaminated, investigative-derived waste (IDW) from the referenced site to a permitted treatment/disposal facility. The transport and disposal must be conducted in accordance with the QAPP and applicable Department of Transportation (DOT) regulations.

On all correspondence concerning this facility, please reference UST Permit #06742. If there are any questions concerning this project, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

BLE Project No. J12-6940-04

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) has completed a 96-hour Mobile Multi-Phase Extraction (MMPE) event at the subject site. This scope of work was performed in response to South Carolina Department of Health and Environmental Control's (SCDHEC) letter, dated June 21, 2012. The results of our activities are provided herein. Please feel free to contact us if you have any questions concerning this report.

Sincerely,

PROJECT INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Numerous environmental assessments have been conducted at the site by various consultants since 1993, including the installation of over seventy-five groundwater monitoring/recovery wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally, petroleum free-product recovery has been conducted via multiple aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property.

Recent AFVR events appear to have been effective in reducing the thicknesses of free-product at the site. Therefore, SCDHEC has requested a 96-hour MMPE event be conducted in an effort to maximize free-product recovery over an extended period of time. This report documents the results of these activities.

MOBILE MULTI-PHASE EXTRACTION EVENT – JULY 9-13, 2012

On July 9-13, 2012, BLE personnel mobilized to the site to perform a 96-hour MMPE event on existing wells MWR-1, MW-6X, MW-51, MW-65, MW-67, and MW-70. The MMPE event was performed by Zava Industrial, Inc. of Graham, North Carolina utilizing an Atlantic Fluidics Multi-Phase Extractor with effluent pump, powered by a Caterpillar 60KW self-contained generator. A hydrogeologist from BLE was on site daily to observe and monitor the week-long event. A site and well location plan is shown as Figure 2.

Prior to initiating the MMPE event, BLE personnel gauged the wells using a Solinst® Interface Meter Model 122. Approximately 0.63 feet (MWR-1), 0.47 feet (MW-6X), 0.01 feet (MW-51), 0.22 feet (MW-65), 0.36 feet (MW-67), and 0.68 feet (MW-70) was detected in the wells (Figure 2). Additionally, the initial depth to free-product/groundwater readings in adjacent wells MWR-2, MW-3X, MW-8, MW-64, MW-66, and MW-69 were measured (feet below top of PVC casing (btoc)) and recorded on Table 1.

The MMPE event was initiated at 0930 on July 9, 2012 and concluded at 0930 on July 13, 2012. The general weather conditions observed during this period of time were partly cloudy skies with scattered showers and thunderstorms; winds varied between 5 and 10 mph with an ambient temperature between 70º and 95º Fahrenheit. Throughout the duration of the MMPE event, a continuous vacuum ranging between 20 and 21.5 inches of mercury was applied to MWR-1, MW-6X, MW-51, MW-65, MW-67, and MW-70. The depth to free-product/groundwater (feet btoc) was also measured daily in adjacent wells MWR-2, MW-3X, MW-8, MW-64, MW-66, and MW-69 to evaluate drawdown and free-product removal. Additionally, on September 10-12, 2012, temporary vacuum was applied to existing wells MWR-1A, MW-8, MW-54, MW-60, MW-61, MW-62, MW-63, MW-64, MW-66, MW-68, MW-69 to remove measurable free-product thicknesses from the wells. Gauging data observed during the MMPE event is shown in Table 1.

Effluent vapor concentrations along with the off-gas stack temperature, relative humidity, and air flow velocity were measured throughout the event using a MiniRAE® 2000 Photoionization Detector (PID) and an Extech 45160 Thermo-Hygro-Anemometer. The observed vapor concentrations are shown in Table 1A.

At the completion of the MMPE event, a total volume of 20,000 gallons of petroleum impacted groundwater was determined to have been recovered from the site. Of this volume, approximately 35 gallons of free-phase petroleum product was measured in the tanker trucks at the end of the MMPE event. Please note that petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste

transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 342 pounds of gasoline vapor which is equivalent to approximately 47 gallons of gasoline, were calculated to have been recovered during the MMPE event. The MMPE emissions calculations for this event are provided as Table 1A.

At the conclusion of the MMPE event, the applicable wells were immediately gauged for the presence of free-product. Free-phase product was only detected in monitoring wells MW-64 (0.09 feet), MW-68 (sheen), MW-61 (0.01 feet), MW-62 (0.02 feet), MW-60 (0.21 feet), and MW-63 (sheen). Total free-product/water level changes for this event are shown in Table 1.

CONCLUSIONS AND RECOMMENDATIONS

A total volume of 20,000 gallons of petroleum impacted groundwater was recovered during this current scope of work. Of this volume, approximately 35 gallons of liquid-phase petroleum product was measured in the tanker trucks and 47 gallons of vapor-phase petroleum product was calculated to have been recovered through off-gas emissions.

On August 14, 2012, BLE personnel mobilized to the site to measure 27 existing wells (MWR-1, MWR-1A, MW-2, MWR-2, MW-3, MWR-3, MWR-4, MWR-4R, MW-6x, MW-7, MW-7R, MW-8, MW-24, MW-25, MW-51, MW-54, and MW-60 through MW-70) for the presence of petroleum free-product. Measurable free-product was detected in 13 of the 27 gauged wells. Pre-MMPE and post-MMPE free-product measurements are shown in tabular format on Figure 2.

The MMPE event appears to have been extremely effective in reducing free-product thicknesses at the subject site. However, since free-product continues to be present in a wide-spread area at the facility, we recommend an additional 96-hour MMPE event be conducted to 1) remove residual free-phase product from the area around each extraction point, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum impacted groundwater (mass) from the

subsurface. We recommend performing the MMPE event on the following wells: MW-54, MW-60, MW-61, MW-62, MW-64, MW-68, and MW-70. Temporary vacuum will be applied to the remaining monitoring wells exhibiting free-product during the MMPE event on an as-needed basis.

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

NOTES:
MMPE event conducted July 9-13, 2012.
Vapor concentrations measured using a portable MiniRAE® 2000
Photo-Ionization Detector (PID).
inches of Hg - inches of mercury
BTOC - below top of casing
ppm - parts per million
Water Level Change (feet) = Final depth to water minus initial depth to water; positive = drawdown; negative = rise
NFP - No free-phase product detected in wells

Prepared By: TJB

Cumulative Total Pounds of Gasoline Recovered as Emissions: 342
Cumulative Total Gallons of Gasoline Recovered as Emissions: 47

NOTES:

Vapor concentrations were measured using a portable MiniRAE® 3000 Photo-Ionization Detector (PID).
inches of Hg - inches of mercury
ppm - parts per million
Q_{std} - flow at DSCFM
DSCFM - Dry Standard Cubic Feet per Minute
PPM_d - "dry" concentration
PPM_c - volumetric concentration of VOC emissions as carbon, dry basis, at STP
K - number of carbons in calibration gas
C_{cm} - mass concentration of VOC emissions as carbon
PMR_c - pollutant mass removal of VOCs as carbon
PMR_g - pollutant mass removal of VOCs as gasoline
B_{wsw} - lb of water per lb of dry air
B_{ws} - water vapor % by volume
Calculations have been derived from published guidance

Padgett, Joel P. <padgetjp@dhec.sc.gov>

Former Crossroads Grocery - UST Permit #06742 - MMPE Event

1 message

Trevor Benton <trevor@blecorp.com> Fri, Sep 21, 2012 at 3:35 PM
To: "Joel P. Padgett" <Padgetjp@dhec.sc.gov>

Hey Joel,

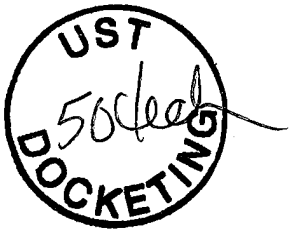
I hope you had a good week. I wanted to let you know that I have sent the MMPE Report to your attention and I am I the process of pulling together the invoice. The costs for the MMPE event were a bit higher than the original CA (as expected). I think if we add the correct volume of water extracted from the site and two additional personnel mobilizations, we will be good. Below are the requested addendums to the Cost Agreement:

Addition of 10,000-gallons of wastewater (20,000 gallons total) @ $0.80/gal = $8,000.00

Addition of 2 personnel mobilizations @ $290.00/each = $580.00

15% Report/Project Management = $1,287.00

Total Project Addendum = $9,867.00



Please let me know if you have any questions or need any additional information. Have a great weekend and GO TIGERS!

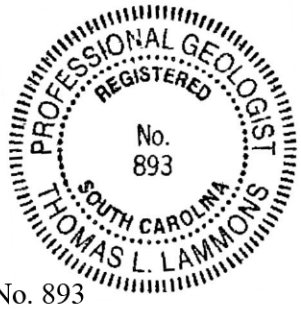
UST Permit #06742; CA #44059
BLE Project No. J12-6940-04

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) has completed a 96-hour Mobile Multi-Phase Extraction (MMPE) event at the subject site. This scope of work was performed in response to South Carolina Department of Health and Environmental Control's (SCDHEC) letter, dated June 21, 2012. The results of our activities are provided herein. Please feel free to contact us if you have any questions concerning this report.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.



Trevor J. Benton, P.G.
Project Hydrogeologist
Registered, South Carolina No. 2395

PROJECT INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Numerous environmental assessments have been conducted at the site by various consultants since 1993, including the installation of over seventy-five groundwater monitoring/recovery wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally, petroleum free-product recovery has been conducted via multiple aggressive fluid vapor recovery (AFVR) events. BLE also understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells are still present on the property.

Recent AFVR events appear to have been effective in reducing the thicknesses of free-product at the site. Therefore, SCDHEC has requested a 96-hour MMPE event be conducted in an effort to maximize free-product recovery over an extended period of time. This report documents the results of these activities.

MOBILE MULTI-PHASE EXTRACTION EVENT – JULY 9-13, 2012

On July 9-13, 2012, BLE personnel mobilized to the site to perform a 96-hour MMPE event on existing wells MWR-1, MW-6X, MW-51, MW-65, MW-67, and MW-70. The MMPE event was performed by Zava Industrial, Inc. of Graham, North Carolina utilizing an Atlantic Fluidics Multi-Phase Extractor with effluent pump, powered by a Caterpillar 60KW self-contained generator. A hydrogeologist from BLE was on site daily to observe and monitor the week-long event. A site and well location plan is shown as Figure 2.

Prior to initiating the MMPE event, BLE personnel gauged the wells using a Solinst® Interface Meter Model 122. Approximately 0.63 feet (MWR-1), 0.47 feet (MW-6X), 0.01 feet (MW-51), 0.22 feet (MW-65), 0.36 feet (MW-67), and 0.68 feet (MW-70) was detected in the wells (Figure 2). Additionally, the initial depth to free-product/groundwater readings in adjacent wells MWR-2, MW-3X, MW-8, MW-64, MW-66, and MW-69 were measured (feet below top of PVC casing (btoc)) and recorded on Table 1.

The MMPE event was initiated at 0930 on July 9, 2012 and concluded at 0930 on July 13, 2012. The general weather conditions observed during this period of time were partly cloudy skies with scattered showers and thunderstorms; winds varied between 5 and 10 mph with an ambient temperature between 70º and 95º Fahrenheit. Throughout the duration of the MMPE event, a continuous vacuum ranging between 20 and 21.5 inches of mercury was applied to MWR-1, MW-6X, MW-51, MW-65, MW-67, and MW-70. The depth to free-product/groundwater (feet btoc) was also measured daily in adjacent wells MWR-2, MW-3X, MW-8, MW-64, MW-66, and MW-69 to evaluate drawdown and free-product removal. Additionally, on September 10-12, 2012, temporary vacuum was applied to existing wells MWR-1A, MW-8, MW-54, MW-60, MW-61, MW-62, MW-63, MW-64, MW-66, MW-68, MW-69 to remove measurable free-product thicknesses from the wells. Gauging data observed during the MMPE event is shown in Table 1.

Effluent vapor concentrations along with the off-gas stack temperature, relative humidity, and air flow velocity were measured throughout the event using a MiniRAE® 2000 Photoionization Detector (PID) and an Extech 45160 Thermo-Hygro-Anemometer. The observed vapor concentrations are shown in Table 1A.

At the completion of the MMPE event, a total volume of 20,000 gallons of petroleum impacted groundwater was determined to have been recovered from the site. Of this volume, approximately 35 gallons of free-phase petroleum product was measured in the tanker trucks at the end of the MMPE event. Please note that petroleum product losses may occur through emulsification with the groundwater and volatilization during the AFVR event. Additionally, the liquids may not have had sufficient time to separate in order to obtain an accurate free-product thickness. Waste

transportation and disposal records for the petroleum impacted groundwater recovered during the AFVR event are provided in Appendix A.

A total of approximately 342 pounds of gasoline vapor which is equivalent to approximately 47 gallons of gasoline, were calculated to have been recovered during the MMPE event. The MMPE emissions calculations for this event are provided as Table 1A.

At the conclusion of the MMPE event, the applicable wells were immediately gauged for the presence of free-product. Free-phase product was only detected in monitoring wells MW-64 (0.09 feet), MW-68 (sheen), MW-61 (0.01 feet), MW-62 (0.02 feet), MW-60 (0.21 feet), and MW-63 (sheen). Total free-product/water level changes for this event are shown in Table 1.

CONCLUSIONS AND RECOMMENDATIONS

A total volume of 20,000 gallons of petroleum impacted groundwater was recovered during this current scope of work. Of this volume, approximately 35 gallons of liquid-phase petroleum product was measured in the tanker trucks and 47 gallons of vapor-phase petroleum product was calculated to have been recovered through off-gas emissions.

On August 14, 2012, BLE personnel mobilized to the site to measure 27 existing wells (MWR-1, MWR-1A, MW-2, MWR-2, MW-3, MWR-3, MWR-4, MWR-4R, MW-6x, MW-7, MW-7R, MW-8, MW-24, MW-25, MW-51, MW-54, and MW-60 through MW-70) for the presence of petroleum free-product. Measurable free-product was detected in 13 of the 27 gauged wells. Pre-MMPE and post-MMPE free-product measurements are shown in tabular format on Figure 2.

The MMPE event appears to have been extremely effective in reducing free-product thicknesses at the subject site. However, since free-product continues to be present in a wide-spread area at the facility, we recommend an additional 96-hour MMPE event be conducted to 1) remove residual free-phase product from the area around each extraction point, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum impacted groundwater (mass) from the

subsurface. We recommend performing the MMPE event on the following wells: MW-54, MW-60, MW-61, MW-62, MW-64, MW-68, and MW-70. Temporary vacuum will be applied to the remaining monitoring wells exhibiting free-product during the MMPE event on an as-needed basis.

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

Re: QAPP Contractor Addendum request
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742
Release reported January 11, 1993
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) recognizes your commitment to continue work at this site using Emerald, Inc. as your contractor. The next scope of work is groundwater sampling as outlined in the UST Quality Assurance Program Plan (QAPP). Please have your contractor plan to sample all monitoring wells, recovery wells, and surface water location SW-1 for BTEX+naph+MtBE+DCA+oxygenates and EDB in accordance with the QAPP and in compliance with all applicable regulations. Do not sample wells containing measurable free-phase product. A copy of the QAPP is available at http://www.scdhec.gov/environment/lwm/usthome/Qapp.htm.

Your contractor must complete and submit a QAPP Contractor Addendum for the sampling, and a cost agreement for the sampling within 30 days of the date of this letter. Upon review and approval of the Addendum and cost agreement, the Division will issue a directive to you for the work.

On all correspondence concerning this site, please reference UST Permit #06742. If there are any questions, feel free to contact me by telephone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

SCDHEC UST Permit #06742
BLE Project No. J13-6940-05

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) submits herein the completed Quality Assurance Program Plan (QAPP) addendum for the subject site. This submittal is in response to the South Carolina Department of Health and Environmental Control's (SCDHEC) QAPP addendum request dated March 25, 2013, for the implementation of a groundwater sampling event at the subject site. Upon approval from SCDHEC, additional copies of the QAPP addendum will be distributed to the parties listed in section A3.

Please do not hesitate to contact us if you have any questions concerning this submittal.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

Table 2A Addendum Role Identification and Contact Information

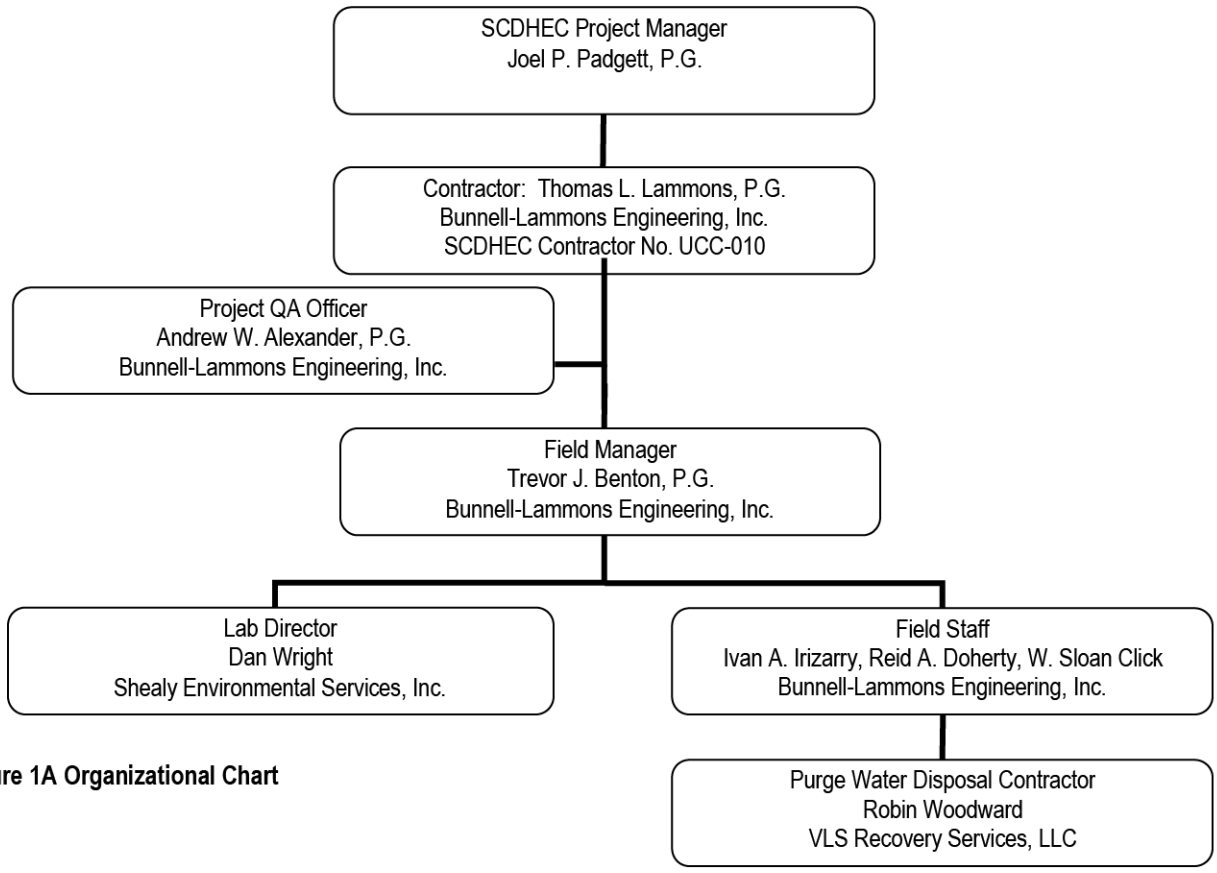

Figure 1A Organizational Chart

Discuss the responsibilities of key individuals associated with the project.

SCHEC Project Manager – Responsible for direct oversight of contractors conducting assessment and site rehabilitation of releases at UST sites. Perform day-to-day review of plans and reports related to site rehabilitation activities on their assigned sites. These reviews include verification and analysis of data submitted to the UST Management Division by site rehabilitation contractors and analytical laboratories and recommendations for future work. Also responsible for validating the Project Data.

Contractor – Responsible for managing and coordinating field and office activities necessary for assessment or cleanup. Perform data analysis and interpretation of field data.

Project QA Officer – Responsible for the Quality Assurance aspect of the Project. The QA officer is independent of the staff generating the project data; however, works closely with the Field Manager to ensure tasks are completed in compliance with the QAPP procedures. Additionally, the QA officer is responsible for monitoring the QA Project Plan.

Field Manager – Oversees and reviews all field activities. Responsible for all duties (i.e. site access, boring access, utility clearance, etc.) required to initiate field activities. Field Staff and the analytical laboratory report directly to the Field Manager with any problems or potential issues. The Field Manager also reviews and compiles all field data provided by the Field Staff and analytical laboratory. Project information is discussed with the Project QA Officer to ensure compliance.

Lab Director – Responsible for ensuring production, quality, and overall direction of the laboratory. Oversees the laboratory QA manager and has the authority to stop work and initiate Corrective Actions if problems are identified.

Field Staff – Conducts field activities such as drilling oversight and sample collection. Field Staff report directly to and provide daily field notes to the Field Manager. Additionally, the field staff are responsible for coordination and management of on-site subcontractors during field work completion.

Purge Water Disposal Contractor – Responsible for classification and disposal of investigation derive waste in accordance with all regulatory requirements. Ensure that proper waste characterization is provided and transportation/disposal manifests are complete.

A5 Problem Definition/Background

Discuss the background (as much as is known) of the site and appropriate historical information, and why this site is being assessed.

The subject property is located at 8050 West Oak Highway in Westminster, South Carolina (Figure 1). The site currently operates as Country Side 2, which is an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: (2) 1,000-gallon gasoline, (1) 550-gallon gasoline, (1) 550-gallon diesel, and (1) 550-gallon kerosene. Five new USTs, (1) 10,000-gallon off-road diesel, (1) 10,000-gallon kerosene, (1) 8,000-gallon "regular" gasoline, (1) 6,000-gallon "plus" gasoline, and (1) 6,000-gallon diesel, and associated equipment were installed in their place. In association with the UST removal activities, a release of petroleum contaminants to the subsurface was reported in January 1993. Numerous environmental assessments have been conducted at the site by various consultants since 1993, including the installation of over eighty-one groundwater monitoring/recovery wells to assess the horizontal and vertical extent of petroleum hydrocarbons in the water table aquifer. Additionally,

petroleum free-product recovery has been conducted via multiple aggressive fluid vapor recovery (AFVR) events and a 96-hour Mobile Multi-Phase Extraction (MMPE) event. BLE understands that the site was previously in active corrective action utilizing a form of injection technology. Several injection wells associated with the prior remedial activities are still present on the property.

In an effort to determine what risk the release may pose to the environment and to evaluate current groundwater chemical of concern (CoC) data, the SCDHEC has required an updated comprehensive groundwater sampling event be conducted at the site. Additionally, one surface water sample (SW-1) is to be collected from an unnamed tributary to Beaverdam Creek, located approximately 675 feet south/southeast of the subject site. A Site Plan depicting the current groundwater monitoring well network and location of the surface water sampling point is provided as Figure 2.

Please answer the following: Does this project fall under UST or Brownfields area?

UST Division (UST Permit #06742)

A6 Project/Task Description

1. ***Summarize what is known about the work to be done. This can be a short sentence indicating what the Scope of this project is (see Master QAPP Section A6).***

Conduct a comprehensive groundwater sampling event at the subject site pursuant to SCDHEC's Master QAPP - Section A6 and B1. Currently, 81 groundwater monitoring wells and one surface water location are associated with the subject site. Each location will be sampled and analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, methyl-tert-butyl-ether (MTBE), 1,2-dichloroethane (1,2-DCA), and 8-oxygenates by EPA Method 8260B and 1,2-dibromoethane (EDB) by EPA Method 8011.

2. ***The work will begin within <u>two weeks</u> after cost approval and the project should be <u>completed within 60 days</u>.***

3. ***Are there time or resource constraints? Include those factors that may interfere with the tentative schedule.***

Weather is a possible time constraint for this current scope of work.

A7 Data Quality Objectives (DQOs) and Data Quality Indicators (DQIs)

Detail the geographical area that is to be part of the project. Maps should be included to show not only the topography and the geographical area of the State, but also to show more detail of the site itself including property lines.

See attached Figures 1 and 2.

A8 Training and Certificates

Required training and licenses:

Title/Job	Name	Training Required	Date training received	Type of License	License Number
Hydrogeologist	Thomas Lammons, P.G., CHMM	40-hour OSHA HAZWOPER & 8-Hour Refresher	1/23/13	SC Professional Geologist	#893
Hydrogeologist	Trevor Benton, P.G.	40-hour OSHA HAZWOPER & 8-Hour Refresher	1/23/13	SC Professional Geologist	#2395
Hydrogeologist	Andrew Alexander, P.G.	40-hour OSHA HAZWOPER & 8-Hour Refresher	1/23/13	SC Professional Geologist	#2028
Geologist	Ivan A. Irizarry	40-hour OSHA HAZWOPER & 8-Hour Refresher	1/23/13	N/A	N/A
Geologist	Reid A. Doherty	40-hour OSHA HAZWOPER & 8-Hour Refresher	3/19/13	N/A	N/A
Geologist	W. Sloan Click	40-hour OSHA HAZWOPER & 8-Hour Refresher	1/23/13	N/A	N/A
Lab Manager	Daniel Wright	N/A	N/A	Lab Certification	SC32010

Table 3A Required Training and Licenses

Thomas L. Lammons, P.G. of Bunnell-Lammons Engineering, Inc. is responsible to ensuring that personnel participating in this project receive the proper training. All training records will be stored in the following location: Bunnell-Lammons Engineering, Inc., Human Resources Department Files c/o Ms. Esther Lande.

It is understood that training records will be produced if requested by SC DHEC.

The Following Laboratory(ies) will be used for this Project:

Commercial Lab(s)

Full Name of the Laboratory: Shealy Environmental Services, Inc.
Name of Lab Director: Dan Wright
SC DHEC Certification Number: 32010
Parameters this Lab will analyze for this project:

Groundwater

- BTEX, Naphthalene, MTBE, 1,2-DCA, and 8-Oxygenates by EPA Method 8260B
- EDB by EPA Method 8011

Please note: SC DHEC may require that the contractor submit some or all of the Laboratory's SOPs as part of this QAPP.

A9 Documents and Records

Personnel will receive the most current version of the QAPP Addendum via: (Check all that apply)

XXX US Mail ____ Courier **XXX** Hand delivered

Section B Measurement/Data Acquisition

B1 Sampling Process/Experimental Design

Item	Start Date	End Date	Comments
QAPP Addendum Preparation/Approval	June 11, 2013	June 25, 2013	Date assumes two weeks for SCDHEC QAPP review.
Monitoring Well Sampling	July 8, 2013	July 11, 2013	Sample groundwater monitoring wells and surface water point as directed. See SOP Attachment A for groundwater sampling procedures.
Report Preparation, Review, and Submittal	July 22, 2013	August 23, 2013	Report preparation, review, and submittal dates are contingent on completion of all required project activities. Date may be subject to change.

Table 5A Sampling Activities

B2 Sampling Methods

Please note: The contractor must follow sampling protocols as given in the UST QAPP.

***Estimate* the number of samples of each matrix that are expected to be collected:**

Soil	0
Ground Water from Monitoring Wells	81
From Drinking/Irrigation Water Wells	0
From Surface Water Features	1
Field Duplicates	5
Field Blanks	4
Trip Blanks	3
Total Number of Water Samples	94

The samples will be (check as many as apply): ____Homogenized ____Split

For the sample matrices indicated above, please describe how samples will be collected and the equipment needed.

A Heron Little Dipper Water Level Indicator and/or a Solinst Interface Meter will be used to measure the depth-to-water and/or depth-to-product in the monitoring wells prior to sample collection. An Oakton Model 35630-62 Multi-Parameter Meter will be used to measure pH, specific conductivity, and temperature during the groundwater sampling event and a YSI 550A Dissolved Oxygen Meter will be used to measure dissolved oxygen levels in the groundwater. Additionally, a LaMotte Model 2020 Turbidimeter will be used to monitor turbidity during purging to ensure that the groundwater sample collected is representative of the formation.

Will Sampling Equipment have to be cleaned and decontaminated or is everything disposable?

Disposable sampling equipment (i.e tubing, bailers, latex gloves, etc.) will be utilized for collecting groundwater samples.

Groundwater monitoring well samples will be collected with disposable polyethylene bailers. A new bailer will be utilized for each sampling location. Monitoring well sampling procedures are provided in SOP Attachment A.

The Heron Little Dipper Water Level Indicator and/or Solinst Interface Meter will require cleaning and decontamination between each groundwater monitoring well sampling. The Oakton Model 35630-62 Multi-Parameter Meter and YSI 550A Dissolved Oxygen Meter will require cleaning and decontamination between measurements.

If sampling equipment must be cleaned please give a detailed description of how this is done and the disposal of by-products from the cleaning and decontamination.

Disposable sampling equipment (i.e. tubing, bailers, latex gloves, etc.) will be utilized for collecting groundwater samples, and will be properly disposed of after collection of each groundwater sample.

The Heron Little Dipper Water Level Indicator and/or Solinst Interface Meter will be cleaned and decontaminated by between each use. Decontamination procedures will consist of donning a new, clean pair of disposable gloves. A clean, lint free paper towel saturated with an alconox (or similar laboratory detergent)-potable water mix and a second paper towel saturated with distilled water will be used to wipe the water level tape as it is rewound onto the spool. Plastic will be placed underneath the meter to capture any rinse fluids. The water level indicator probe will be rinsed with an alconox-potable water mix, followed by a final rinse with distilled water. Used gloves and paper towels will be properly disposed of after decontamination procedures are complete.

The Oakton Model 35630-62 Multi-Parameter Meter, YSI 550A Dissolved Oxygen Meter, and LaMotte Model 2020 Turbidimeter will be cleaned and decontaminated between each measurement by first rinsing with an alconox-potable water mix. If the sampling equipment is severely contaminated, a soft disposable brush will be used. The alconox-potable water rinse will be followed by several rinses with de-ionized water prior to the next measurement. The glass cylinders of the LaMotte Model 2020 Turbidimeter will be wiped dry with a clean, lint free cloth following decontamination.

By-products of the cleaning and decontamination will be contained in a 55-gallon drum and transported off-site for disposal at a permitted facility.

Identify any equipment and support facilities needed. This may include such things as Fed-ex to ship the samples, a Geoprobe, field analysis done by another contractor (who must be certified), and electricity to run sampling equipment.

Equipment: Chevrolet 1500 support truck with power inverter capabilities

Water Disposal Contractor: VLS Recovery Services, LLC – 305 S. Main Street, Mauldin, SC 29662

Laboratory Courier: Shealy Environmental – 106 Vantage Point Drive, West Columbia, SC 29172

Address the actions to be taken when problems occur in the field, and the person responsible for taking corrective action and how the corrective action will be documented.

Failure	Response	Documentation	Individual Responsible
Property Access	Notify SCDHEC project manager of failure to receive property access.	Telephone record/ email correspondence to SCDHEC placed in project file.	Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com
Monitoring Well Not Located or Well is Dry	Field personnel notify field manager of issue(s). Field manger will notify SCDHEC project manager of issue(s).	Field notes placed in project file. Telephone record/email (if applicable) to SCDHEC placed in project file.	Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com
Heron Little Dipper Water Level Indicator Failure	Notify field manager of equipment failure. Clean indicator probe and replace batteries in the field. If problem persists, use backup water level indicator and send failed equipment to Field Environmental Instruments, Inc. in Pittsburgh, Pennsylvania for repair.	Telephone record/email correspondence to field manager.	Field Staff: Ivan A. Irizarry Reid A. Doherty W. Sloan Click Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com
Solinst Interface Meter Product – Water Level Indicator Failure	Notify field manager of equipment failure. Clean indicator probe and replace batteries in the field. If problem persists, use backup interface meter and send failed equipment to Field Environmental Instruments, Inc. in Pittsburgh, Pennsylvania for repair.	Telephone record/email correspondence to field manager.	Field Staff: Ivan A. Irizarry Reid A. Doherty W. Sloan Click Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com

Failure	Response	Documentation	Individual Responsible
Oakton Model 35630-62 Multi-Parameter Meter Failure	Notify field manager of equipment failure. Clean probe and replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup meter and send failed equipment to Field Environmental Instruments, Inc. in Pittsburgh, Pennsylvania for repair.	Telephone record/email correspondence to field manager.	Field Staff: Ivan A. Irizarry Reid A. Doherty W. Sloan Click Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com
YSI 550A Dissolved Oxygen Meter	Notify field manager of equipment failure. Replace membrane with spare, clean probe, and replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup meter and send failed equipment to Pine Environmental Services in Lilburn, Georgia for repair.	Telephone record/email correspondence to field manager.	Field Staff: Ivan A. Irizarry Reid A. Doherty W. Sloan Click Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com
LaMotte Model 2020 Turbidimeter Failure	Notify field manager of equipment failure. Replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup turbidimeter and send failed equipment to Pine Environmental Services in Lilburn, Georgia for repair.	Telephone record/email correspondence to field manager.	Field Staff: Ivan A. Irizarry Reid A. Doherty W. Sloan Click Field Manager: Trevor J. Benton, P.G. trevor@blecorp.com

Table 6A Field Corrective Action

B3 Sample Handling and Custody

1. ***How will the samples get from the Site to the Lab to ensure holding requirements are met?***

   By vehicle to BLE office; then vehicle pick-up by laboratory courier who delivers to lab location.

2. ***How will the contractors cool the samples and keep the samples cool?***

   Wet ice will be used in an appropriate sized cooler for storage of samples between project site and office. Once at office, samples will be maintained at appropriate temperatures in a refrigerator/freezer in a secured storage room located within the office.

3. ***How will the lab determine the temperature of the samples upon receipt? Will they be using a temperature blank?***

   A calibrated thermometer and temperature blank will be used to document sample temperature. The temperature blank is immediately checked by the sample receiving technician upon arrival at the laboratory.

4. ***Where will the samples be stored in the Lab once they are received?***

   All samples are stored in clean refrigeration units monitored and maintained at 4 degrees C + or – 2 degrees. Volatile organic samples are stored separately from all other samples.

5. ***Describe the chain of custody procedure and attach a copy of each chain of custody that will be used. If a Chain of Custody SOP exists from the Lab and the Contractor is willing to adhere to it, then this may be attached.***

   A chain of custody (COC) will be filled out for each sampling event at the site. COC will be signed by Bunnell-Lammons Engineering, Inc. field staff and Shealy Environmental Services, Inc. lab staff at time physical transfer of samples occurs to courier. Shealy Environmental Services, Inc. uses the following COC procedures to protect sample integrity following pickup by their courier: A full time Sample Receiving Technician receives all samples and completes a Sample Receipt Checklist (SRC), which will identify any anomalies. If any anomalies exist, the Sample Receiving Technician or Project Manager must resolve the deviation internally and/or notify the client to resolve the anomaly. A copy of a standard Shealy Environmental Services, Inc. COC is included with SOP Attachment A.

B4 Analytical Methods

1. ***Identify the SOPs which will be used to analyze the samples, the method which the SOP references and the equipment or instrumentation that is needed:***

Parameter	SOP ID*	Method Referenced	Equipment	Comments
Specific Conductivity	See Standard Operating Procedures Attachment B for Oakton pH/Conductivity Series 10 Multi-Parameter Tester Calibration and Operation Procedures	Manufacturer Product Manual/Specifications	Oakton Model 35630-62 Multi-Parameter Meter	None
pH	See Standard Operating Procedures Attachment B for Oakton pH/Conductivity Series 10 Multi-Parameter Tester Calibration and Operation Procedures	Manufacturer Product Manual/Specifications	Oakton Model 35630-62 Multi-Parameter Meter	None
Temperature	See Standard Operating Procedures Attachment B for Oakton pH/Conductivity Series 10 Multi-Parameter Tester Calibration and Operation Procedures	Manufacturer Product Manual/Specifications	Oakton Model 35630-62 Multi-Parameter Meter	None
Dissolved Oxygen	See Standard Operating Procedures Attachment C for YSI 550A Dissolved Oxygen Instrument Calibration, Maintenance, and Operation Procedures	Manufacturer Product Manual/Specifications	YSI 550A Dissolved Oxygen Meter	None

Turbidity	See Attachment D Standard Operating Procedures for LaMotte Model 2020 Turbidimeter Instrument Analysis	Manufacturer Product Manual/Specifications	LaMotte Model 2020 Turbidimeter	None
BTEX+Naphthalene +MTBE+1,2-DCA+ 8 Oxygenates	S-VO-002	8260B	GC/MS	None
EDB	S-SV-012	8011	GC	None

Table 7A Analytical SOPs and Referenced Methods

- **This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key.**

Abbreviation	Identification of this SOP	Full Name of the SOP
SOP Attachment A	SOP Attachment A	Monitoring Well Purging and Sampling Procedures

Table 8A SOP Abbreviation Key

2. Identify procedures to follow when failures occur, identify the individual responsible for corrective action and appropriate documentation:

Failure	Response	Documented Where?	Individual Responsible
COC or Sample Receiving Issues	Call Client	Sample Receiving Checklist (SRC)	PM – Lucas Odom lodom@shealylab.com
Analytical Errors	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director – Daniel Wright dwright@shealylab.com
QA/QC Failure	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director – Daniel Wright dwright@shealylab.com QA/QC Officer – Jami Savje jsavje@shealylab.com
On Time Delivery	Corrective Action Form (CAF)	CAF filled out by PM	Lab Director – Daniel Wright dwright@shealylab.com QA/QC Officer – Jami Savje jsavje@shealylab.com
Specific Conductivity Reading Failure	Notify field manager of equipment failure. Clean probe and replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup meter and send failed equipment to Field Environmental Instruments, Inc. in Pittsburgh, Pennsylvania for repair.	Include a narrative of problem in field notes	*Field Staff:* Ivan A. Irizarry Reid A. Doherty W. Sloan Click *Field Manager:* Trevor J. Benton, P.G. trevor@blecorp.com

Failure	Response	Documented Where?	Individual Responsible
pH Reading Failure	Notify field manager of equipment failure. Clean probe and replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup meter and send failed equipment to Field Environmental Instruments, Inc. in Pittsburgh, Pennsylvania for repair.	Include a narrative of problem in field notes	*Field Staff:* Ivan A. Irizarry, Reid A. Doherty, W. Sloan Click; *Field Manager:* Trevor J. Benton, P.G. trevor@blecorp.com
Temperature Reading Failure	Notify field manager of equipment failure. Clean probe and replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup meter and send failed equipment to Field Environmental Instruments, Inc. in Pittsburgh, Pennsylvania for repair.	Include a narrative of problem in field notes	*Field Staff:* Ivan A. Irizarry, Reid A. Doherty, W. Sloan Click; *Field Manager:* Trevor J. Benton, P.G. trevor@blecorp.com
Dissolved Oxygen Reading Failure	Notify field manager of equipment failure. Replace membrane with spare, clean probe, and replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup meter and send failed equipment to Pine Environmental Services in Lilburn, Georgia for repair.	Include a narrative of problem in field notes	*Field Staff:* Ivan A. Irizarry, Reid A. Doherty, W. Sloan Click; *Field Manager:* Trevor J. Benton, P.G. trevor@blecorp.com
Turbidimeter Reading Failure	Notify field manager of equipment failure. Replace batteries in the field, then recalibrate according to manufacturer's standards. If problem persists, use backup turbidimeter and send failed equipment to Pine Environmental Services in Lilburn, Georgia for repair.	Include a narrative of problem in field notes	*Field Staff:* Ivan A. Irizarry, Reid A. Doherty, W.Sloan Click; *Field Manager:* Trevor J. Benton, P.G. trevor@blecorp.com

Table 9A Corrective Action Procedures

3. Identify sample disposal procedures.

Analysis	Matrix	Schedule for disposal	Method for disposal	Comments
BTEX+Naphthalene+MTBE+ 1,2-DCA+8 Oxygenates	Water	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	None
EDB	Waters/Soils	Six Weeks	Tested for Hazardous Constituents and disposed as Hazardous or non-Hazardous waste.	None

Table 10A Sample Disposal

4. **Provide SOPs for the Kerr Method or the Ferrous Iron Method if these are parameters for this study. This can be attached or written here. If attached please note that it is an attachment and where it is located (if applicable).**

   Not Applicable for this scope of work.

B5 Quality Control Requirements:

All QC will follow the requirements laid out in Section B5 of the UST Programmatic QAPP.

B6 Field Instrument and Equipment Testing, Inspection and Maintenance

1. **Identify all field and laboratory equipment needing periodic maintenance, the schedule for this, and the person responsible. Not the availability and location of spare parts.**

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person Responsible
Heron Little Dipper Water Level Indicator	18816	Indicator probe cleaning (in accordance with Section B2) and battery monitoring	Daily	Replacement probe/battery – available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry
Solinst Interface Meter - Model 122	122 007909-1	Indicator probe cleaning (in accordance with Section B2)	Daily	Replacement probe – available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry
Oakton 35630-62 Multi-Parameter Meter (pH, specific conductivity, and temperature)	324976	Probe cleaning and calibration in accordance with SOP Attachment B	Weekly	Replacement parts available at Field Environmental Instruments, Inc. in Pittsburgh, PA	Ivan Irizarry
YSI 550A Dissolved Oxygen Meter	06A1121AC	Probe cleaning and membrane replacement in accordance with SOP Attachment C	Cleaning – daily Membrane replacement - monthly	Cleaning supplies and additional membranes and salt solution - available at Pine Environmental Services, Inc. in Lilburn, GA	Ivan Irizarry
LaMotte Model 2020 Turbidimeter	3164-1602	Cleaning and calibration	Daily	Lint-free cloth and turbidity standards available at Pine Environmental Services, Inc. in Lilburn, GA	Ivan Irizarry
Volatiles Mass Spec	ALL	Change traps, clean ion source, replace filaments	Periodic	Laboratory	MSV Analyst

Instrument	Serial Number	Type of Maintenance	Frequency	Parts needed/Location	Person Responsible
ECD GC	ALL	Injection port maintenance, column replacement	Periodic	Laboratory	GC Analyst

Table 11A Instrument and Equipment Maintenance

2. **Identify the testing criteria for each lab or field instrument that is used to ensure the equipment is performing properly. Indicate how deficiencies, if found, will be resolved, re-inspections performed, and effectiveness of corrective action determined and documented. Give the person responsible for this.**

Instrument/Equipment & Serial Number	Type of Inspection	Requirement	Individual Responsible	Resolution of Deficiencies
Heron Little Dipper Water Level Indicator 18816	Inspect probe/tape condition and battery output	Inspect probe and tape for continuity. Test probe with conductive water to ensure meter is properly working	Ivan Irizarry	Clean/replace probe or tape as necessary
Solinst Interface Meter - Model 122 122 007909-1	Inspect probe/tape condition and battery output	Inspect probe and tape for continuity. Test probe with conductive water to ensure meter is properly working	Ivan Irizarry	Clean/replace probe or tape as necessary
Oakton 35630-62 Multi-Parameter Meter 324976	Inspect probe condition and verify output reading accuracy	Inspect probe for cracks or breaks. Inspect for residue on probe tips. Compare output readings to known standards.	Ivan Irizarry	Clean/replace probe. Calibrate instrument if output readings do not match standard values
YSI 55 Dissolved Oxygen Meter 06A1121AC	Inspect probe/membrane condition.	Inspect probe for cracks or breaks. Verify that probe membrane is filled with salt (KCl) solution. Inspect for residue on probe tips. Compare output readings to known standards.	Ivan Irizarry	Clean/replace probe. Replace membrane. Calibrate instrument if output readings do not match standard values
LaMotte Model 2020 Turbidimeter 3164-1602	Inspect meter condition and verify output reading accuracy	Inspect glass cylinders for cracks or scratches that may interfere with proper turbidity measurements. Compare output readings to known standards.	Ivan Irizarry	Clean/replace glass cylinders. Calibrate instrument if output readings do not match standard values.
Volatiles Mass Spec	Daily calibration check	Method Requirements	MSV Analyst	Recalibration or instrument maintenance
ECD GC	Daily calibration check	Method Requirements	GC Analyst	Recalibration or instrument maintenance

Table 12A Instrument and Equipment Inspection

B7 Instrument Calibration and Frequency

1. **Identify equipment, tools, and instruments for field or lab work that should be calibrated and the frequency.**
2. **Describe how the calibrations should be performed and documented, indicating test criteria and standards or certified equipment.**
3. **Identify how deficiencies should be resolved and documented. Identify the person responsible for corrective action.**

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
Oakton 35630-62 Multi-Parameter Meter	Four point conductivity calibration; three point pH calibration; temperature verification	Daily	pH: Output value within ±1.00 pH unit of buffer Conductivity: Output value with 20% of calibration range at standard temperature.	Recalibrate equipment. If calibrations will not hold then replace unit.	Ivan Irizarry	SOP Attachment B *Oakton pH/Conductivity Series 10 Multi-Parameter Tester Calibration Procedures*
YSI 55 Dissolved Oxygen Meter	% Saturation	Daily	Output value within 1 mg/L of calibration solution.	Recalibrate equipment or replace membrane.	Ivan Irizarry	SOP Attachment C *YSI 550A Dissolved Oxygen Instrument Calibration and Maintenance Procedures*
LaMotte Model 2020 Turbidimeter	AMCO Turbidity Standard (1.0 NTU, 10 NTU, 100 NTU, or 250 NTU) in the expected turbidity range of the samples to be tested	Daily or as needed during sampling	Output value within 0.1 NTU for measured turbidity values less than 10 NTU, and 1 NTU for measured turbidity values greater than 10 NTU.	Recalibrate equipment. If calibration will not hold then replace unit.	Ivan Irizarry	SOP Attachment D *LaMotte Model 2020 Turbidimeter Calibration and Operation Procedures*
Heron little dipper water level indicator	Calibrate against an invar steel surveyor's chain or steel tape	Monthly	Within 0.01 foot per 10 feet length	Replace water level meter tape	Ivan Irizarry	See Master QAPP
Solinst Interface Meter – Model 122	Calibrate against an invar steel surveyor's chain or steel tape	Monthly	Within 0.01 foot per 10 feet length	Replace water level meter tape	Ivan Irizarry	See Master QAPP
Volatiles Mass Spec	Minimum of 5 calibration standards for all compounds	When indicated by continuous calibration verification standard	Method Criteria	Detailed in Laboratory SOP	MSV Analyst	S-VO-002

Instrument	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference*
GC ECD	Minimum of 5 calibration standards for all compounds	When indicated by calibration verification standard	Method Criteria	Detailed in Laboratory SOP	GC Analyst	S-SV-012

Table 13A Instrument Calibration Criteria and Corrective Action

*** This can be a full name of a SOP, an abbreviation, or a number. In the latter two cases, the abbreviation or number must be associated with the full name of the SOP. See also Table 8A SOP Abbreviation Key**

B8 Inspection/Acceptance Requirements for Supplies and Consumables

1. **Identify critical supplies and consumables for field and laboratory, noting supply source, acceptance criteria, and procedures for tracking, storing and retrieving these materials.**
2. **Identify the individual(s) responsible for this.**

Item	Vendor	Acceptance criteria	Handling/Storage Conditions	Person responsible for inspection and tracking
Leather work gloves	Grainger	New or in good condition (if previously used) with no tears	Store away from direct sunlight in work vehicle	Ivan Irizarry
Latex gloves	Eon Products	New material	Store in clean supply room located at BLE office	Ivan Irizarry
36-inch weighted polyethylene bailer	Eon Products	New material	Store in clean supply room located at BLE office	Ivan Irizarry
Five-gallon polyethylene bucket	Lowes	New or in good condition (if previously used) with no cracks or holes	Store in clean supply room located at BLE office	Ivan Irizarry
Nylon twine	Grainger/Lowes	New material	Store in clean supply room located at BLE office	Ivan Irizarry
Laboratory Chemicals	Fisher, VWR	Certificates of analysis and laboratory testing	Laboratory storage	Receiving and laboratory personnel
Laboratory standards	O2Si, Restek, High Purity, VHG, Supelco	Certificates of analysis and laboratory verifications	Vendor specific storage conditions	Laboratory Analysts
Sample Containers	Daniels Scientific, QEC	Certificates of analysis and laboratory testing	Bottle storage area	Sample receiving personnel
15 lb bags of ice	Convenience store	Pre-package bag of wet ice	Store in laboratory provided coolers	Ivan Irizarry

55-gallon steel open-head drums	Dependable Drum Co.	New or reconditioned. Drums with holes or cracks will not be accepted	Storage at BLE lay-down yard until transported to site. At the site, drums will be filled and staged in a safe location. Drums will be moved around the site with a 1,000-lb capacity drum dolly.	Ivan Irizarry
Non-hazardous waste labels (vinyl)	Grainger	New material	Store in clean supply room located at BLE office	Ivan Irizarry

Table 14A List of Consumables and Acceptance Criteria

B9 Data Acquisition Requirements (Non-Direct Measurements)

1. **Identify data sources, for example, computer databases or literature files, or models that should be accessed or used.**
2. **Describe the intended use of this information and the rationale for their selection, i.e., its relevance to project.**
3. **Indicate the acceptance criteria for these data sources and/or models.**

Data Source	Used for	Justification for use in this project	Comments
Report of Assessment Activities by Midlands Environmental Consultants, Inc., dated June 5, 2007	Monitoring well construction information and historical groundwater analytical results	Data tables utilized for determining well depths and historical analytical results	None
Report of Monitoring Well Installation by Midlands Environmental Consultants, Inc., dated September 5, 2008.	Additional monitoring well construction information.	Boring logs utilized for determining the total well depth of additional monitoring wells.	None
Report of Recovery Well Installation and Free-Product Gauging by BLE, dated June 1, 2012.	Identifying locations of the existing groundwater monitoring/ recovery wells at the site.	Site plan and data tables utilized for determining location of wells and well depths.	None

Table 15A Non-Direct Measurements

4. **Identify key resources/support facilities needed.**

Not applicable to this scope of work.

B10 Data Management

1. Describe the data management scheme from field to final use and storage.

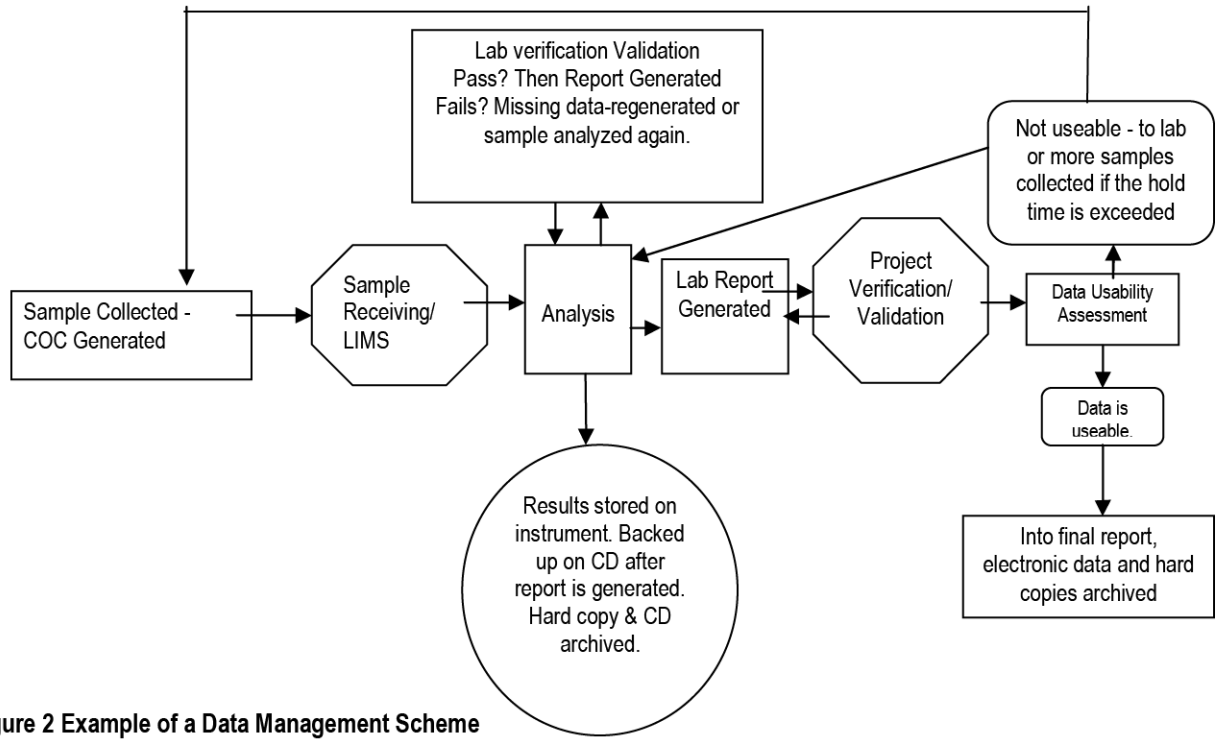

Figure 2 Example of a Data Management Scheme

2. How does the lab and field staff ensure that no unauthorized changes are made to the chain of custody, sampling notebooks, laboratory notebooks and computer records?

The chain of custody has an attached carbon copy, in which the field staff keeps one copy after the laboratory picks up samples. This original is used to determine if any changes are made to the COC after laboratory receipt. All COCs are reviewed by the laboratory during receipt of samples and submittal of final report. Looking for inappropriate changes to the COC is in the scope of both laboratory reviews. The Quality Assurance/Quality Control Department oversees adherence to and review of these programs.

Field notes and logs will be stored in hardback bound field books and/or on standard 8 ½" x 11" field data sheets. Field data sheets are signed by field staff upon completion of daily work.

Copies of field notes and sampling logs are reviewed by the Field Manager and placed in the project file. Additionally, field notes/logs are scanned, password secured, and placed into the digital project file. Original data sheets will also be kept by the field staff in field notebooks/folders for a minimum of three years.

3. **How does the lab ensure that there are no errors in samples records including times when sample information is compiled, data calculated and/or transmitted?**

   The use of a Laboratory Information Management System (LIMS) is employed. The LIMS database is reviewed daily by laboratory management. Furthermore, the database is backed up daily to prevent the loss of data in the event of a system malfunction. Documentation of these procedures is provided in laboratory SOP S-AD-003, LIMS.

4. **How will the data be archived once the report is produced? How can it be retrieved? (This applies to both electronic and hard copies).**

   The laboratory QA/QC department maintains and archives hardcopy data offsite. Electronic data is maintained and archived by the laboratory IT systems manager.

   The final analytical data from Shealy Environmental Services, Inc. will be kept by the laboratory for a minimum of seven years. A hard copy of the data will be stored at an off-site facility and a digital copy will be saved on a backed-up computer server.

   Hard copies of BLE's final reports are contained in the specific project folder in BLE's file library. Additionally, each report is converted to digital format and stored in its applicable digital file folder. Hard copy storage will be for a minimum of three years. Digital storage will be for a minimum of five years. Digital data is backed-up on a weekly basis on a four month rolling schedule. For security purposes, current week's data is stored at an off-site location. Additionally, data is backed-up and stored for a minimum of five years at an off-site location on a biannual basis.

Section C Assessment and Oversight

C1 Assessment and Response Actions

1. ***The Contractor is supposed to observe field personnel daily during sampling activities to ensure samples are collected and handled properly and report problems to DHEC within 24 hours. Please state who is responsible for doing this and what observations will be made. Will this person have the authority to stop work if severe problems are seen?***

   Internal field audits will be performed on a daily basis by Trevor Benton, P.G. of Bunnell-Lammons Engineering, Inc. If any significant problems or deviations from the QAPP are noted, work may be stopped to resolve the issues. The SCDHEC project manager will be notified of the issues within 24 hours of the occurrence.

2. ***The SCDHEC UST QAPP states that the Lab will receive an Offsite Technical System Audit. For this project, what assessments will be done on the Commercial Lab(s) that are being used—other than their certification audit? When or how often are these done? Who will the results be given to and who has the ability to stop work if problems are severe?***

   The laboratory submits annual Proficiency Testing (PT) samples to Wibby Environmental. Wibby is an approved vendor that submits PT results to the office of environmental laboratory certification. The laboratory director has the authority to stop work and submit Corrective Actions if problems are severe.

C2 Reports to Management

See the SC DHEC UST Programmatic QAPP (UST Master QAPP).

Section D Data Validation and Usability

STANDARD OPERATING PROCEDURES AND FORMS

ATTACHMENT A

MONITORING WELL PURGING AND SAMPLING PROCEDURES

Monitoring wells will be purged prior to sample collection to remove any stagnant water from the well so that the samples collected are representative of the groundwater quality in the vicinity of the well. For wells that recover quickly, a minimum of three volumes of water will be evacuated. Specific conductance, pH, turbidity, and water temperature will be measured periodically during well evacuation using properly calibrated instruments. Wells that are evacuated to dryness with less than three well volumes being removed will be sampled as soon as the well has recovered enough to yield sufficient volume for a sample.

The monitoring wells will be purged using a 36-inch long by 1.6-inch diameter disposable polyethylene bailer attached to an unused nylon cord. The wells will also be sampled using a bailer as described above.

Samples will be placed in the appropriate laboratory supplied containers and marked with identifying numbers. Samples will be maintained at 4°Celsius in a refrigerated sample cooler and shipped to Shealy Environmental Services, Inc. in West Columbia, South Carolina via courier service for analysis.

ATTACHMENT B

OAKTON PH/CONDUCTIVITY SERIES 10 MULTI-PARAMETER TESTER CALIBRATION AND OPERATION PROCEDURES

The Oakton pH/conductivity multi-parameter series 10 tester requires a set of three calibrations for each of its output components. The three calibrations required for the meter are temperature, pH, and specific conductivity. The temperature calibration is based on comparing the meter based temperature reading to an appropriately calibrated thermometer. The pH calibration is based on a multi-point calibration utilizing three different buffers (pH 4, pH 7, and pH 10). The conductivity calibration is based on a four point calibration setup utilizing a set of predefined conductivity range solutions. The procedures to perform the three different calibrations are as follow.

Temperature Calibration

The built-in temperature sensor included in the probe is factory calibrated. The temperature sensor is calibrated only if temperature errors are suspected or if the probe is replaced. Temperature calibration procedures are as follows:

1. Power on the meter and select the pH mode.

2. Pres the Cal/measure key to enter calibration monde, the CAL indicator will appear above the primary display.

3. While in pH calibration mode, press the MODE key to enter temperature calibration mode. The primary display shows the temperature reading with zero offset and the secondary display shows you what the temperature value was initially.

4. The probe is dipped into a temperature bath and its allowed sufficient time for the meter's temperature reading to stabilize.

5. Once stabilized the temperature is set in to the meter using the up and down keys to match the temperature bath. The word Con appears on the screen indicating that calibration is complete.

Note: Since temperature readings affect the accuracy of the pH and conductivity measurements, pH and conductivity calibration are performed following the completion of the temperature calibration is.

pH Calibration

The instrument is capable of performing three point calibrations for pH. Though the three points are not essential for calibration, for our purposes we shall perform a three point pH calibration. The calibrations are performed by using standard pH buffers of 4.00, 7.00 and 10.00.

1. Select pH mode

2. Rinse the probe with DI water or rinse solution.

3. Dip the probe into the calibration buffer and stir the buffer. Press CAL/MEAS to enter the pH calibration mode. The primary display will show the measured reading while the smaller secondary display will indicate the pH standard buffer solution.

OAKTON PH/CONDUCTIVITY SERIES 10 MULTI-PARAMETER TESTER CALIBRATION AND OPERATION PROCEDURES - CONTINUED

4. Wait for the measured pH value to stabilize. The READY indicator will display when the reading stabilizes.

5. After the reading has stabilized and the READY indicator is displayed, press ENTER to confirm the calibration. A confirming indicator (CON) flashes and disappears. The meter is now calibrated to the buffer indicated in the secondary display.

The secondary display automatically scrolls to the next buffer calibration option if you are performing multi-point calibration, go to

6. Press the up or down keys to select the next buffer value you want to calibrate (pH 4.00, 7.00 or 10.00).

7. Repeat steps 1 through 6.

8. When calibration is complete, press CAL/MEAS to return to pH measurement mode.

Note: If the selected buffer value is not within ±1.00 pH from the measured pH value: The electrode and buffer icon blink and the ERR enunciator appears in the lower left corner of the display. These indicators also flash if the buffer used is not the same as the buffer value on the secondary display.

Conductivity Calibration

The series 10 pH/conductivity meter has four different conductivity measuring ranges. You can calibrate one point in each of the measuring ranges (up to four points). If you are measuring values in more than one range, each of the ranges must be calibrated. The following table lists the corresponding conductivity range. You should calibrate each range using a solution that falls between the values in the "recommended calibration solution range" column.

Conductivity Range Calibration Solution Range:

0.00 µS	19.99 µS	6.00 µS	17.0 µS
0.00 µS	199.9 µS	60.0 µS	170 µS
0.00 µS	1999 µS	600 µS	1700 µS
0.00 mS	19.99 mS	6.00 mS	17.00 mS

Note: Minimum calibration value should be 20% of full scale for the specific range (e.g.: the **LOWEST** calibration value for the range of 0.00 to 19.99 µS is 4.00 µS). When the meter is recalibrated, old calibrations are replaced on a range basis.

Conductivity calibration procedures are as follows:

1. Pour out two separate portions of the selected calibration standard and one of DI water into separate clean containers.

2. Select the conductivity mode on the meter.

OAKTON PH/CONDUCTIVITY SERIES 10 MULTI-PARAMETER TESTER CALIBRATION AND OPERATION PROCEDURES - CONTINUED

3. Rinse the probe with DI water, and then rinse the probe in one portion of the calibration standard. Submerge the probe into the second portion of the calibration standard. The meter auto ranging function selects the appropriate conductivity range (four ranges are possible). Be sure the probe is free from air bubbles and sufficient calibration standard is used to cover the conductivity sensor. Wait for the reading to stabilize. Once the readings have stabilized, the READY indicator should appear in the upper left hand corner.

4. Press the CAL/MEAS key. The CAL indicator appears above the primary display. The primary display shows the measured reading and the secondary display shows the temperature.

5. Use the up and down keys to match the reading to the solution standard.

6. Press the ENTER key to confirm calibration. Upon confirmation, the CON indicator appears briefly. The meter automatically switches back into Measurement mode. The display now shows the calibrated, temperature compensated conductivity value.

7. For calibration in other ranges (maximum: four ranges) repeat steps 1 through 6 with the appropriate calibration standards.

Meter Operation

The READY indicator appears on the display when the meter has stabilized. It will turn off if the readings start to fluctuate.

To take measurements:

1. Rinse the probe with DI water before use to remove any impurities adhering to the probebody. If the pH electrode has dehydrated, soak it for 30 minutes in tap water.

2. Switch on the meter. The MEAS annunciator appears on the top center of the LCD. The ATC indicator appears in the lower right hand corner to indicate Automatic Temperature Compensation.

3. Dip the probe into the sample. Allow time for the readings to stabilize. Note the readings on the display. When the readings are stable, the READY annunciator appears.

   Note: *Conductivity readings are auto-ranging and will automatically move to the correct range (four ranges possible).*

4. To toggle between pH and conductivity readings, press the MODE key.

   Note: *When measuring a sample, make sure that the probe is immersed beyond the electrode band. Stir the sample using the probe gently to create a homogenous sample.*

ATTACHMENT C

YSI 550A DISSOLVED OXYGEN INSTRUMENT CALIBRATION, MAINTENANCE, AND OPERATION PROCEDURES

INSTRUMENT CALIBRATION

Dissolved oxygen calibration must be done in an environment with known oxygen content. The YSI 550A DO Instrument can be calibrated in either mg/L or % saturation. BLE's preference is utilizing the % saturation method. Calibration instructions are described below:

1. Ensure that the sponge inside the instrument's calibration chamber is moist. Insert the probe into the calibration chamber.

2. Power the instrument on and allow readings to stabilize. This may take 5 to 15 minutes, depending on the age of the instrument and condition of the probe.

3. Press and release both the **UP ARROW** and **DOWN ARROW** keys at the same time to enter the calibration menu.

4. Press the **Mode** key until "%" is displayed on the right side of the screen for oxygen units. Press **ENTER**.

5. The LCD will prompt you to enter the local altitude in hundreds of feet. Use the arrow keys to increase or decrease the altitude. When the proper altitude appears on the LCD, press the **ENTER** key.

6. **CAL** will now display in the lower left corner of the screen, the calibration value in the lower right corner and the current DO reading (before calibration) will be the main display. Once the current DO reading is stable, press the **ENTER** button.

7. The LCD will prompt you to enter the approximate salinity of the water you are about to analyze. You can enter any number from 0 to 70 parts per thousand (PPT) of salinity. Use the arrow keys to increase or decrease the salinity setting. When the correct salinity appears on the LCD, press the **ENTER** key. The instrument will return to normal operation.

Upon completion of % saturation calibration, dissolved oxygen values can be compared to a known oxygen content for verification. Typically a 0.0 mg/L dissolved oxygen solution is utilized for this verification step.

MEMBRANE MAINTENANCE

A thin semi-permeable membrane, stretched over the sensor, isolates the electrodes from the environment, while allowing gases to enter. When a polarizing voltage is applied to the sensor electrodes oxygen that has passed through the membrane reacts at the cathode causing a current to flow. The membrane passes oxygen at a rate proportional to the pressure difference across it. Since oxygen is rapidly consumed at the

YSI 550A DISSOLVED OXYGEN INSTRUMENT CALIBRATION, MAINTENANCE, AND OPERATION PROCEDURES – CONTINUED

cathode, it can be assumed that the oxygen pressure inside the membrane is zero. Hence, the force causing the oxygen to diffuse through the membrane is proportional to the partial pressure of oxygen outside the membrane. As the oxygen partial pressure varies, so does the oxygen diffusion through the membrane. This causes the probe current to change proportionally. Additional membrane changes will be required over time. The average replacement interval is 4 to 8 weeks, although they may last longer if kept clean. To clean the membrane, a Kimwipe, and rubbing alcohol will be used to gently remove the contamination. Membranes will be replaced as necessary. Membrane replacement procedures are described below:

1. Remove the probe sensor guard to access the probe tip.

2. Unscrew and remove the old membrane cap and discard.

3. Thoroughly rinse the sensor tip with distilled or DI water.

4. Fill a new membrane cap with O2 probe solution that has been prepared according to the directions on the bottle. Be very careful not to touch the membrane surface. Lightly tap the side of the membrane cap to release bubbles that may be trapped.

5. Thread the membrane cap onto the probe. It is normal for a small amount of electrolyte to overflow.

6. Replace the probe sensor guard.

METER OPERATION

It is important to recognize that a very small amount of oxygen dissolved in the sample is consumed during probe operation. It is therefore essential that the sample be continuously stirred at the sensor tip. If stagnation occurs, measurements will appear artificially low. Stirring may be accomplished by mechanically moving the sample around the probe tip, or by moving the probe through the sample. The YSI Model 550A has a flow dependence of <25%. The rate of stirring required is 1/2 foot per second (16cm per second). Measurement procedures are as follows:

1. Insert the probe into the sample to be measured.

2. Continuously stir or move the probe through the sample.

3. Allow temperature and dissolved oxygen readings to stabilize.

4. Observe/Record readings.

5. Rinse the probe with clean water after each use and return probe to the calibration/storage chamber.

6. If unstable readings or membrane damage occurs, replace both the membrane cap and electrolyte solution.

ATTACHMENT D

LAMOTTE MODEL 2020 TURBIDIMETER CALIBRATION AND OPERATION PROCEDURES

The LaMotte Model 2020 Turbidimeter is a portable, microprocessor controlled nephelometer (suspended colloid meter). The LaMotte Model 2020 measures the scattering of a beam of light as it passes through a water sample in order to produce an average reading of nephelometric turbidity units (NTU). All readings are determined by the process of signal averaging over a 5 second period, minimizing fluctuations in readings attributed to large particles and enabling rapid, repeatable measurements. The microprocessor enables auto-ranging over the full range of 0 to 1,100 NTU and provides direct digital readout with a resolution of 0.01 NTU for the lowest range.

INSTRUMENT CALIBRATION

- Select a LaMotte AMCO 2020 Turbidity Standard (1.0 NTU, 10 NTU, 100 NTU, or 250 NTU) in the expected turbidity range of the samples to be tested. Wipe the outside of the standard tube with a clean, lint-free cloth.

- Open the lid of the meter. Align the indexing arrow mark on the tube with the indexing arrow mark on the meter, and insert the tube into the analysis chamber. Close the lid.

- Push the CAL button. While the display is flashing, adjust the display up or down using the arrow buttons until the value of the standard is displayed.

- Push the CAL button again to memorize the calibration. The display will stop flashing when the calibration is complete.

INSTRUMENT OPERATION

- Fill a clean sample tube with 50 ml of sample water and replace cap. Set sample aside to equilibrate with the air temperature and allow gases to escape.

- Rinse and empty a sample tube with a portion of the water sample and shake out excess water.

- Fill the sample tube to the neck by carefully pouring the temperature equilibrated sample down the side of the tube to avoid creating bubbles.

- Cap the tube and wipe dry with a clean, lint-free cloth.

- Open the meter lid, align the indexing arrow on the tube with the indexing arrow on the meter. Insert the tube into the meter chamber.

- Close the lid to the meter. Push READ button. The turbidity in NTU units will be displayed within 5 seconds.

- The meter will automatically turn off after 2 minutes after the last button is pressed. To turn off the meter manually, hold the READ button down for more than 1 second. Release the button when OFF is displayed.

Re: Ground-water sampling directive
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; CA #45513
Release reported January 11, 1993
QAPP Contractor Addendum received June 17, 2013
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) has reviewed and approved the referenced QAPP Contractor Addendum submitted by Bunnell-Lammons Engineering, Inc. Ground-water sampling as outlined in the Addendum may proceed immediately upon receipt of this letter. The work must be conducted in accordance with the Quality Assurance Program Plan (QAPP) for the UST Management Division. A copy of the QAPP is available at http://www.scdhec.gov/environment/lwm/usthome/Qapp.htm.

Cost Agreement (CA) #45513 has been approved in the amount shown on the enclosed cost agreement form for the sampling of 81 monitoring/recovery wells and one surface water location for BTEX+naph+MtBE+DCA+oxygenates and EDB. Do not sample wells containing measurable free-phase product. Please note that all applicable South Carolina certification requirements apply to the sampling and report preparation. Further, all site rehabilitation activities must be performed and submitted by a South Carolina-Certified Underground Storage Tank Site Rehabilitation Contractor.

A monitoring report, contractor checklist (QAPP Appendix K), and invoice are due within 60 days from the date of this letter. Your contractor may directly bill the State Underground Petroleum Environmental Response Bank (SUPERB) Account. Interim invoices may not be submitted for this scope of work. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Agency is obtained. If for any reason additional tasks will be completed, these additional tasks and the associated cost must be pre-approved by the Agency for the cost to be paid. The Agency reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established

criteria. Further, the Agency reserves the right to question and/or reject costs if deemed unreasonable and the right to audit project records at any time during the project or after completion of work.

The UST Management Division grants pre-approval for transportation of petroleum-contaminated, investigative-derived waste (IDW) from the referenced site to a permitted treatment/disposal facility. The transport and disposal must be conducted in accordance with the QAPP.

On all correspondence concerning this facility, please reference UST Permit #06742. If there are any questions concerning this project, feel free to contact me by telephone at (803) 898-0655, by fax at (803) 898-0673, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

BLE Project No. J13-6940-05

Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) has completed a comprehensive groundwater sampling event at the subject site. This scope of work was performed in response to the South Carolina Department of Health and Environmental Control's (SCDHEC) directive dated June 26, 2013 and in accordance with BLE's Quality Assurance Project Plan (QAPP) Addendum dated June 11, 2013. The results of our activities are provided herein.

The Assessment Component Invoice will be submitted under separate cover to Ms. Robertha Dorsey of the SCDHEC, Bureau of Business Management, Division of Procurement Services for payment. Please do not hesitate to contact us if you have any questions concerning this report.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.

BACKGROUND INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, Oconee County, South Carolina (Figure 1). The site currently operates as Country Side 2, an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: two 1,000-gallon gasoline, one 550-gallon gasoline, one 550-gallon diesel, and one 550-gallon kerosene. Five USTs are currently in use at the site: one 10,000-gallon off-road diesel, one 10,000-gallon kerosene, one 8,000-gallon "regular" gasoline, one 6,000-gallon "plus" gasoline, and one 6,000-gallon diesel, and associated equipment were installed in their place. In January 1993, during the UST removal activities, a release of petroleum from the UST system was reported. Numerous environmental assessments have been conducted at the site by various consultants since 1993, including the installation of over eighty-one groundwater monitoring/recovery/injection wells to assess the horizontal and vertical extent of petroleum hydrocarbons in groundwater beneath the site. Additionally, petroleum free-product recovery has been conducted via multiple Aggressive Fluid Vapor Recovery (AFVR) events and a 96-hour Mobile Multi-Phase Extraction (MMPE) event. BLE also understands the site was previously in active corrective action utilizing a form of injection technology. Several injection wells associated with the prior remedial activities are still present on the property.

On June 26, 2013, in an effort to determine what risk the release may pose to the environment and to evaluate current groundwater chemical of concern (CoC) data, the SCDHEC issued a directive for the completion of a comprehensive groundwater sampling event at the subject site. The directive was submitted upon approval of BLE's Quality Assurance Program Plan (QAPP) Addendum dated June 11, 2013. This report documents the results of these activities.

GROUNDWATER WATER SAMPLING

From August 12, 2013 to August 15, 2013, BLE personnel mobilized to the site to measure groundwater levels and collect groundwater and surface water samples. The subject site contains eighty-one groundwater access points, consisting of the following:

- Seventy 2-inch diameter monitoring wells:
    - Forty-two shallow monitoring wells (MW-1 through MW-7, MW-7R, MW-8, MW-9, MW-9R, MW-11, MW-12, MW-13R, MW-14R, MW-14R2, MW-15R, MW-23 through MW-25, MW-29, MW-32, MW38, MW-43, MW46, MW-47, MW-49 through MW-55, MW-58, MW-59, MWR-1 through MWR-4, MWR-11, MWR-1A, and MWR-4R)
    - Two intermediate single-cased wells (MW-44I and MW-57I),
    - Nine intermediate double-cased wells (MW-17I, MW-19I, MW-21I, MW-26I, MW-30I, MW-33I, MW-35I, MW-39I, and MW-41I),
    - Eight deep-penetrating double-cased wells emplaced on the top of rock (MW-18D, MW-20D, MW-22D, MW-31D, MW-34D, MW-36D, MW-40D, and MW-42D),
    - Three deep-penetrating double-cased wells advanced into rock (MW-16DD, MW-28DD, and MW-37DD), and
    - Six injection wells (MW-1X through MW-6X).
- Eleven 4-inch diameter recovery wells (MW-60 through MW-70)

Additionally, one surface water sampling point (SW-1) is located down-gradient of the subject site.

The following monitoring wells were not able to be sampled during the current scope of work:

- MW-1, MW-3, and MW-4X were dry;
- MW-8 (0.58-feet), MW-51 (0.22-feet), and MW-60 (0.01-feet) contained free-phase product;
- MW-50 was not able to be located, and is thought to be under a pile of lumber;
- MW-3X was obstructed by organic debris, and;
- MW-5X has been destroyed.

Groundwater level measurements are summarized on Table 1. Monitoring well locations and a groundwater elevation contour map, which shows the occurrence and direction of groundwater flow in the uppermost aquifer, are provided in Figure 2. Groundwater flow is generally to the south/southeast from the site.

Pursuant to the SCDHEC's directive and the site specific QAPP, monitoring wells associated with the site were purged prior to groundwater sample collection. Petroleum-impacted purge-water generated during the sampling event was contained in sealed 55-gallon drums on-site and later transported off-site for disposal. Monitoring well purging and sampling procedures are described in Appendix A and a disposal manifest for the purge-water is included as Appendix B.

Seventy-two groundwater monitoring wells (MWR-1, MWR-1A, MW-2, MWR-2, MWR-3, MW-4, MWR-4, MWR-4R, MW-5 through MW-7, MW-7R, MW-9, MW-9R, MW-11, MWR-11, MW-12, MW-13R, MW-14R, MW-14R2, MW-15R, MW-16DD, MW17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-22D, MW-23 through MW-25, MW-26I, MW-28DD, MW-29, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-37DD, MW38, MW-39I, MW-40D, MW-41I, MW-42D, MW-43, MW-44I, MW-46, MW-47, MW-49, MW-52 through MW-55, MW-57I, MW-58, MW-59, MW-61 through MW-70, MW-1X, MW-2X, and MW-6X) were sampled for laboratory analyses from August 13, 2013 to August 15, 2013. Additionally, one surface water location (SW-1) was sampled on August 14, 2013. Sample containers were marked in the field with identifying numbers, properly preserved, placed into sample coolers, secured, and maintained at less than 4 degrees Celsius. The samples and chain-of-custody records were delivered to Shealy Environmental Services, Inc. in West Columbia, South Carolina for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, MTBE, 1,2-dichloroethane (1,2 DCA), and 8-oxygenates by Environmental Protection Agency (EPA) Method 8260B and 1,2-dibromoethane (EDB) by EPA Method 8011. Additionally, as required by the SCDHEC's Master QAPP Revision 2.0, dated April 2013, four field duplicates (denoted by the suffix DUP), three field blanks, and two trip blanks were collected and submitted for the appropriate laboratory analyses. Monitoring well sampling procedures and logs are provided in Appendix A.

GROUNDWATER SAMPLING RESULTS

Of the seventy-two groundwater monitoring wells and one surface water point sampled for laboratory analysis, fifty-one monitoring wells and the surface water point detected petroleum

hydrocarbon chemicals of concern (CoCs) above South Carolina Risk-Based Screening Levels[1] (RBSLs). Concentrations exceeding RBSLs are as follows:

Benzene: MWR-1, MWR-1A, MWR-2, MW-4, MWR-4, MWR-4R, MW-6, MW-7, MW-7R, MW-11, MWR-11, MW-13R, MW-14R2, MW-16DD, MW-17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-24, MW-25, MW-26I, MW-28DD, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-39I, MW-40D, MW-52, MW-54, MW-57I, MW-61 through MW-70, MW-1X, MW-2X, and MW-6X;

Toluene: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-6, MW-7, MW-7R, MW-17I, MW-19I, MW-52, MW-54, MW-61 through MW-70, MW-2X, and MW-6X;

Ethylbenzene: MWR-1, MWR-1A, MWR-4, MWR-4R, MW-7, MW-7R, MW-17I, MW-19I, MW-52, MW-54, MW-62 through MW-70, MW-2X, and MW-6X;

Xylenes: MWR-1, MWR-1A, MWR-4, MWR-4R, MW-7, MW-7R, MW-17I, MW-19I, MW-54, MW-61 through MW-70, MW-2X, and MW-6X;

MTBE: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-7R, MW-13R, MW-15R, MW-17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-25, MW-26I, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-39I, MW-40D, MW-46, MW-52, MW-59, MW-61, MW-65 through MW-70, MW-2X, MW-6X, and SW-1;

Naphthalene: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-6, MW-7, MW-7R, MWR-11, MW-13R, MW-14R2, MW-17I, MW-18D, MW-19I, MW-25, MW-30I, MW-34D, MW-52, MW-61, MW-62, MW-63, MW-65 through MW-67, MW-69, MW-70, and MW-6X;

EDB: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-19I, MW-21I, MW-52, MW-54, MW-61 through MW-70, MW-2X, and MW-6X;

1,2-DCA: MW-4, MW-13R, MW-18D, MW-26I, MW-63, MW-64, MW-69, and MW-2X;

Diisopropyl Ether (IPE): MWR-1A, MW-21I, and MW-64;

[1] South Carolina Risk-Based Corrective Action for Petroleum Releases, Bureau of Land and Waste Management, Underground Storage Tank Program, May 15, 2001.

Tert-amyl alcohol (TAA): MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-6, MW-13R, MW-17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-25, MW-26I, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-39I, MW-40D, MW-52, MW-61, MW-63 through MW-67, MW-69, MW-70, MW-6X, and SW-1;
Tert-amyl methyl ether (TAME): MWR-1, MWR-1A, MW-19I, MW-21I, and MW-64;
Tert-butyl alcohol (TBA): MWR-1, MWR-1A, MW-4, MW-19I, MW-67, and MW-70.

Various petroleum hydrocarbons were also detected in groundwater monitoring wells MW-2, MW-22D, MW-37DD, MW-38, MW-42D, MW-43, MW-44I, and MW-49, however, the concentrations did not exceed South Carolina established RBSLs. Additionally, free-phase petroleum product was discovered in monitoring wells MW-8 (0.58-feet), MW-51 (0.22-feet), and MW-60 (0.01-feet). Historical groundwater analytical results from the groundwater monitoring wells and surface water sampling point associated with the facility are summarized in Tables 2A and 2B and current groundwater CoC concentrations are shown on Figure 3. Laboratory data sheets are provided in Appendix C.

CONCLUSIONS AND RECOMMENDATIONS

Based on the groundwater elevation data obtained during this sampling event, groundwater appears to flow south/southeast from the area of the UST system release. The depth to groundwater in the unconfined aquifer ranges from 7.49-feet bgs (MW-43) to 30.60-feet bgs (MW-25) across the study area. Petroleum constituents detected in the groundwater above RBSLs during the August 2013 groundwater sampling event include: BTEX, MTBE, naphthalene, EDB, 1,2-DCA, IPE, TAA, TAME, and TBA. Free-phase petroleum product was also detected in monitoring wells MW-8 (0.58-feet), MW-51 (0.22-feet), and MW-60 (0.01-feet).

Based on current groundwater CoC concentrations, it appears that the contamination plume is not currently defined horizontally or vertically; therefore, BLE recommends the installation of eight additional shallow groundwater monitoring wells. The proposed locations of the new groundwater monitoring wells are depicted on Figure 4.

Additionally, BLE recommends a 96-hour MMPE event be conducted to 1) remove residual free-phase product from the area around each extraction point, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum-impacted groundwater (mass) from the subsurface. We recommend performing the MMPE event on the following wells: MWR-4R, MW-52, MW-61, MW-62, MW-63, MW-64, MW-65, MW-66, MW-67, MW-68, MW-69, and MW-70. Temporary vacuum will be applied to the remaining monitoring wells exhibiting free-product during the MMPE event on an as-needed basis.

Approximately 30 days after completion of the MMPE event, we recommend a comprehensive groundwater sampling event be performed to evaluate contaminant trends on the site and to evaluate the effectiveness of the MMPE event at removing free-phase petroleum product and reducing concentrations of petroleum compounds in the groundwater.

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

NOTES:

Groundwater levels were measured on August 12, 2013 and August 13, 2013.

Historical monitoring well construction and groundwater elevation data prior to 2013 were obtained from the *Report of Assessment Activities* and the *Report of Monitoring Well Installation* by Midlands Environmental Consultants, Inc. dated June 5, 2007 and September 5, 2008, respectively.

Measurements are in feet.

BTOC - below top of casing

BGS - below ground surface

* - Depth to groundwater has been corrected for the presence of free product using the specific gravity of 0.70 g/ml.

Notes:
Historical free-product thickness measurements and laboratory analytical data prior to 2013 were obtained from the *Report of Assessment Activities* by Midlands Environmental Consultants, Inc. dated June 5, 2007.
MTBE = Methyl tertiary butyl ether
EDB = 1,2-Dibromoethane
1,2-DCA = 1,2-Dichloroethane
µg/liter = micrograms/liter = approximate Parts Per Billion (ppb)
Bold cells indicate detections
Shaded cells indicate concentrations above RBSLs
ND = Not Detected at the Method Detection Limit
NT = Not Tested
J = estimated value between practical quantitative limit and method detection limit.
RBSL = Risk Based Screening Level

MONITORING WELL SAMPLING PROCEDURES AND SAMPLING LOGS

APPENDIX A

MONITORING WELL PURGING AND SAMPLING PROCEDURES

Pursuant to SCDHEC's directive, monitoring wells were purged prior to sample collection to remove any stagnant water from the well so that the samples collected were representative of the groundwater quality in the vicinity of each well. For wells that recovered quickly, a minimum of three volumes of water were evacuated. Specific conductance, pH, turbidity, and water temperature were measured periodically during well evacuation using instruments which were calibrated daily. Wells that were evacuated to dryness with less than three well volumes being removed were sampled as soon as the well had recovered enough to yield sufficient volume for a sample.

The monitoring wells were purged using a 4-foot long by 1.6-inch diameter disposable polyethylene bailer attached to an unused polypropylene cord. The wells were also sampled using a bailer as described above. To minimize the potential for cross-contamination between wells, a new clean bailer was used at each well.

STREAM (SURFACE WATER) SAMPLING PROCEDURES

Surface water samples were collected using the following field procedure:

1. The sample handler donned a new pair of latex gloves prior to collection of each sample.

2. With the appropriate sample caps unscrewed the sample container was carefully lowered below the water level upstream from the sampler and without touching any floating material or dislodging Teflon® discs inside the caps.

3. The samples were collected into 40-ml VOC vials and were filled to the top without headspace. Care was taken so that the acids in the bottles did not contact the sampler's gloves and thus pass to other caps and bottles. The vials were recapped without touching the interior of the cap, and screwed down tightly. Samples were moved to an ice chest where they were labeled, placed in bubble pack bags, and iced down immediately upon collection.

Samples for VOC analysis were placed in laboratory prepared 40-milliliter glass vials with Teflon® lined lids and marked with identifying numbers. The VOC samples were preserved using hydrochloric acid (HCl). The sample containers were maintained at approximately 4° Celsius in a refrigerated sample cooler and shipped to Shealy Environmental Services, Inc. (SC#32010) in West Columbia, South Carolina via courier service for analysis.

Relinquished by	Date/Time	Received by	Date/Time
Reid A. Doherty	8/16/13 : 1338	Shealy	8/16/13 : 1338

Well #	06742-MW34D				
Well Diameter (D)	2	inch of	57.15	feet(ft) bgs	
conversion factor (C): 3.143*(D/2)^2					
for a 2 inch well C = 0.163					
for a 4 inch well C = 0.652					
*Free Product Thickness	---	ft			
Total Well Depth (TWD)	51.15	ft btoc			
Depth to Groundwater (DGW)	14.61	ft btoc			
Length of Water Colum (LWC = TWD-DGW)			36.54	ft	
1 Casing Volume (LWC*C) =	36.54	X .17	=	6.21	gals
3 Casing Volumes = 3 X	6.21	=		18.63	gals
	(Standard Purge Volume)				

Total Volume of Water Purged Before Sampling 10.0 gals

*If free product is present over 1/8 inch, sampling will not be required.

	Initial	1st Vol.	2nd Vol.	3rd Vol.	4th Vol.	5th Vol.	6th Vol.	7th Vol.	8th Vol.	Post
Volume Purged (gallons)	---	6.5	10.0							
Time (military)	1046	1050	1054							
pH (s.u)	6.42	6.57	6.62							
Specific Conductivity (ΩS)	153	153	150							
Water Temperature (°C)	19.9	19.4	19.6							
Turbidity (NTU)	100	75	65							
Dissolved Oxygen (mg/l)	4.21									

Remarks: Well purged dry after 10.0-gallons removed. Well sampled at 1054 on August 15, 2013.

LABORATORY ANALYTICAL DATA SHEETS

Report of Analysis

Bunnell-Lammons Engineering, Inc.
6004 Ponders Court
Greenville, SC 29615
Attention: Dan Osbourne

Project Name: **Country Side 2**

Project Number: **J13-6940-05**

Lot Number: **OH17005**

Date Completed: **09/03/2013**

Lucas Odom
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Bunnell-Lammons Engineering, Inc.
Lot Number: OH17005

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

EDB by Microextraction

Sample -030 recovered the surrogate above method criteria. No corrective action was required as the sample was non-detect for the target compound.

Samples -034 and -061 were qualified with a "P" as the relative percent difference (RPD) between the two GC columns exceeded method criteria. Per SCDHEC, the lower of the two values has been reported.

Samples -063 and -075 were diluted 10X and 20X respectively due to large detections of the target compound. No corrective action was required as it is known that dilutions of 5X and greater may impact surrogate recoveries.

Sample Summary

1,1,1,2-Tetrachloroethane		90	57-137

PQL = Practical quantitation limit
ND = Not detected at or above the MDL
B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
N = Recovery is out of criteria
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

Sample Receipt Checklist (SRC)

Client: BLE Cooler Inspected by/date: tca 8/17/13 Lot #: OH 17005

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt: #5 0.1 °C #6 3.0 °C ___ °C ___ °C

Method: ☐ Temperature Blank ☑ Against Bottles

Method of coolant: ☑ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: ___. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☐	No ☑		10. Did all container label information (ID, date, time) agree with COC? -041
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☐	No ☑		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☑	No ☐	NA ☐	16. Were bubbles present >"pea-size" (¼"or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) ___ were received incorrectly preserved and were adjusted accordingly in sample receiving with ___ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number) -045(3) -060(3) -005(1) -064(2)

Sample(s) -013(2), -024(1), -043(1), were received with bubbles >6 mm in diameter.

Sample(s) ___ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/phenol

Sample labels verified by: ___ Date: ___

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: ___ Date of response: ___

Comments: -041 Wrong label listed MW-26 DW but time of collection same as on COC
-061 (2) vials labeled MW-53 but time of collection same as MW-52

APPENDIX D

SCDHEC CONTRACTOR CHECKLIST

Contractor Checklist

For each report submitted to the UST Management Division, the contractor will be required to verify that all data elements for the required scope of work have been provided. For items not required for the scope of work, the N/A box should be checked. For items required and not completed or provided, the No box should be checked and a thorough description of the reason must be provided.

Item #	Item	Yes	No	N/A
1	Is Facility Name, Permit #, and address provided?	✓		
2	Is UST Owner/Operator name, address, & phone number provided?	✓		
3	Is name, address, & phone number of current property owner provided?	✓		
4	Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?	✓		
5	Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?			✓
6	Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided?	✓		
7	Has the facility history been summarized?	✓		
8	Has the regional geology and hydrogeology been described?			✓
9	Are the receptor survey results provided as required?			✓
10	Has current use of the site and adjacent land been described?	✓		
11	Has the site-specific geology and hydrogeology been described?			✓
12	Has the primary soil type been described?			✓
13	Have field screening results been described?			✓
14	Has a description of the soil sample collection and preservation been detailed?			✓
15	Has the field screening methodology and procedure been detailed?			✓
16	Has the monitoring well installation and development dates been provided?			✓
17	Has the method of well development been detailed?			✓
18	Has justification been provided for the locations of the monitoring wells?			✓
19	Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?			✓
20	Has the groundwater sampling methodology been detailed?	✓		
21	Have the groundwater sampling dates and groundwater measurements been provided?	✓		
22	Has the purging methodology been detailed?	✓		
23	Has the volume of water purged from each well been provided along with measurements to verify that purging is complete?	✓		
24	If free-product is present, has the thickness been provided?	✓		
25	Does the report include a brief discussion of the assessment done and the results?	✓		
26	Does the report include a brief discussion of the aquifer evaluation and results?			✓
27	Does the report include a brief discussion of the fate & transport models used?			✓

Item #	Item	Yes	No	N/A
28	Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)			✓
29	Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)			✓
30	Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)			✓
31	Have recommendations for further action been provided and explained?	✓		
32	Has the soil analytical data for the site been provided in tabular format?			✓
33	Has the potentiometric data for the site been provided in tabular format?	✓		
34	Has the current and historical laboratory data been provided in tabular format?	✓		
35	Have the aquifer characteristics been provided and summarized on the appropriate form?			✓
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			✓
37	Has the topographic map been provided with all required elements? (Figure 1)	✓		
38	Has the site base map been provided with all required elements? (Figure 2)	✓		
39	Have the CoC site maps been provided?	✓		
40	Has the site potentiometric map been provided?	✓		
41	Have the geologic cross-sections been provided?			✓
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			✓
43	Has the site survey been provided and include all necessary elements? (Appendix A)			✓
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements?	✓		
45	Is the laboratory performing the analyses properly certified?	✓		
46	Has the tax map been included with all necessary elements? (Appendix C)			✓
47	Have the soil boring/field screening logs been provided?			✓
48	Have the well completion logs and SCDHEC Form 1903 been provided?			✓
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			✓
50	Have the disposal manifests been provided?	✓		
51	Has a copy of the local zoning regulations been provided? (Appendix H)			✓
52	Has all fate and transport modeling been provided? (Appendix I)			
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			✓
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?	✓		

Explanation for missing and incomplete information?

Subject: **Report of Comprehensive Groundwater Sampling Event – August 2013**
Country Side 2
8050 West Oak Highway
Westminster, Oconee County, South Carolina
UST Permit #06742; CA #45513
BLE Project No. J13-6940-05

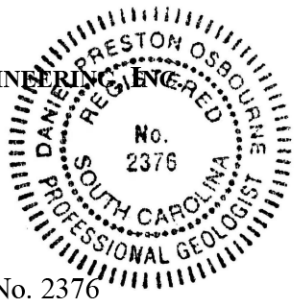
Dear Mr. Padgett:

On behalf of Mr. Neil Alexander, Bunnell-Lammons Engineering, Inc. (BLE) has completed a comprehensive groundwater sampling event at the subject site. This scope of work was performed in response to the South Carolina Department of Health and Environmental Control's (SCDHEC) directive dated June 26, 2013 and in accordance with BLE's Quality Assurance Project Plan (QAPP) Addendum dated June 11, 2013. The results of our activities are provided herein.

The Assessment Component Invoice will be submitted under separate cover to Ms. Robertha Dorsey of the SCDHEC, Bureau of Business Management, Division of Procurement Services for payment. Please do not hesitate to contact us if you have any questions concerning this report.

Sincerely,

BUNNELL-LAMMONS ENGINEERING, INC.



Daniel P. Osbourne, P.G.

BACKGROUND INFORMATION

The subject property is located at 8050 West Oak Highway in Westminster, Oconee County, South Carolina (Figure 1). The site currently operates as Country Side 2, an active automobile fueling station and convenience store. We understand that five underground storage tanks (USTs) and associated piping and fueling dispensers were removed from the site in June 1990: two 1,000-gallon gasoline, one 550-gallon gasoline, one 550-gallon diesel, and one 550-gallon kerosene. Five USTs are currently in use at the site: one 10,000-gallon off-road diesel, one 10,000-gallon kerosene, one 8,000-gallon "regular" gasoline, one 6,000-gallon "plus" gasoline, and one 6,000-gallon diesel, and associated equipment were installed in their place. In January 1993, during the UST removal activities, a release of petroleum from the UST system was reported. Numerous environmental assessments have been conducted at the site by various consultants since 1993, including the installation of over eighty-one groundwater monitoring/recovery/injection wells to assess the horizontal and vertical extent of petroleum hydrocarbons in groundwater beneath the site. Additionally, petroleum free-product recovery has been conducted via multiple Aggressive Fluid Vapor Recovery (AFVR) events and a 96-hour Mobile Multi-Phase Extraction (MMPE) event. BLE also understands the site was previously in active corrective action utilizing a form of injection technology. Several injection wells associated with the prior remedial activities are still present on the property.

On June 26, 2013, in an effort to determine what risk the release may pose to the environment and to evaluate current groundwater chemical of concern (CoC) data, the SCDHEC issued a directive for the completion of a comprehensive groundwater sampling event at the subject site. The directive was submitted upon approval of BLE's Quality Assurance Program Plan (QAPP) Addendum dated June 11, 2013. This report documents the results of these activities.

GROUNDWATER WATER SAMPLING

From August 12, 2013 to August 15, 2013, BLE personnel mobilized to the site to measure groundwater levels and collect groundwater and surface water samples. The subject site contains eighty-one groundwater access points, consisting of the following:

- Seventy 2-inch diameter monitoring wells:
    - Forty-two shallow monitoring wells (MW-1 through MW-7, MW-7R, MW-8, MW-9, MW-9R, MW-11, MW-12, MW-13R, MW-14R, MW-14R2, MW-15R, MW-23 through MW-25, MW-29, MW-32, MW38, MW-43, MW46, MW-47, MW-49 through MW-55, MW-58, MW-59, MWR-1 through MWR-4, MWR-11, MWR-1A, and MWR-4R)
    - Two intermediate single-cased wells (MW-44I and MW-57I),
    - Nine intermediate double-cased wells (MW-17I, MW-19I, MW-21I, MW-26I, MW-30I, MW-33I, MW-35I, MW-39I, and MW-41I),
    - Eight deep-penetrating double-cased wells emplaced on the top of rock (MW-18D, MW-20D, MW-22D, MW-31D, MW-34D, MW-36D, MW-40D, and MW-42D),
    - Three deep-penetrating double-cased wells advanced into rock (MW-16DD, MW-28DD, and MW-37DD), and
    - Six injection wells (MW-1X through MW-6X).
- Eleven 4-inch diameter recovery wells (MW-60 through MW-70)

Additionally, one surface water sampling point (SW-1) is located down-gradient of the subject site.

The following monitoring wells were not able to be sampled during the current scope of work:

- MW-1, MW-3, and MW-4X were dry;
- MW-8 (0.58-feet), MW-51 (0.22-feet), and MW-60 (0.01-feet) contained free-phase product;
- MW-50 was not able to be located, and is thought to be under a pile of lumber;
- MW-3X was obstructed by organic debris, and;
- MW-5X has been destroyed.

Groundwater level measurements are summarized on Table 1. Monitoring well locations and a groundwater elevation contour map, which shows the occurrence and direction of groundwater flow in the uppermost aquifer, are provided in Figure 2. Groundwater flow is generally to the south/southeast from the site.

Pursuant to the SCDHEC's directive and the site specific QAPP, monitoring wells associated with the site were purged prior to groundwater sample collection. Petroleum-impacted purge-water generated during the sampling event was contained in sealed 55-gallon drums on-site and later transported off-site for disposal. Monitoring well purging and sampling procedures are described in Appendix A and a disposal manifest for the purge-water is included as Appendix B.

Seventy-two groundwater monitoring wells (MWR-1, MWR-1A, MW-2, MWR-2, MWR-3, MW-4, MWR-4, MWR-4R, MW-5 through MW-7, MW-7R, MW-9, MW-9R, MW-11, MWR-11, MW-12, MW-13R, MW-14R, MW-14R2, MW-15R, MW-16DD, MW17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-22D, MW-23 through MW-25, MW-26I, MW-28DD, MW-29, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-37DD, MW38, MW-39I, MW-40D, MW-41I, MW-42D, MW-43, MW-44I, MW-46, MW-47, MW-49, MW-52 through MW-55, MW-57I, MW-58, MW-59, MW-61 through MW-70, MW-1X, MW-2X, and MW-6X) were sampled for laboratory analyses from August 13, 2013 to August 15, 2013. Additionally, one surface water location (SW-1) was sampled on August 14, 2013. Sample containers were marked in the field with identifying numbers, properly preserved, placed into sample coolers, secured, and maintained at less than 4 degrees Celsius. The samples and chain-of-custody records were delivered to Shealy Environmental Services, Inc. in West Columbia, South Carolina for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, MTBE, 1,2-dichloroethane (1,2 DCA), and 8-oxygenates by Environmental Protection Agency (EPA) Method 8260B and 1,2-dibromoethane (EDB) by EPA Method 8011. Additionally, as required by the SCDHEC's Master QAPP Revision 2.0, dated April 2013, four field duplicates (denoted by the suffix DUP), three field blanks, and two trip blanks were collected and submitted for the appropriate laboratory analyses. Monitoring well sampling procedures and logs are provided in Appendix A.

GROUNDWATER SAMPLING RESULTS

Of the seventy-two groundwater monitoring wells and one surface water point sampled for laboratory analysis, fifty-one monitoring wells and the surface water point detected petroleum

hydrocarbon chemicals of concern (CoCs) above South Carolina Risk-Based Screening Levels[1] (RBSLs). Concentrations exceeding RBSLs are as follows:

Benzene: MWR-1, MWR-1A, MWR-2, MW-4, MWR-4, MWR-4R, MW-6, MW-7, MW-7R, MW-11, MWR-11, MW-13R, MW-14R2, MW-16DD, MW-17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-24, MW-25, MW-26I, MW-28DD, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-39I, MW-40D, MW-52, MW-54, MW-57I, MW-61 through MW-70, MW-1X, MW-2X, and MW-6X;

Toluene: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-6, MW-7, MW-7R, MW-17I, MW-19I, MW-52, MW-54, MW-61 through MW-70, MW-2X, and MW-6X;

Ethylbenzene: MWR-1, MWR-1A, MWR-4, MWR-4R, MW-7, MW-7R, MW-17I, MW-19I, MW-52, MW-54, MW-62 through MW-70, MW-2X, and MW-6X;

Xylenes: MWR-1, MWR-1A, MWR-4, MWR-4R, MW-7, MW-7R, MW-17I, MW-19I, MW-54, MW-61 through MW-70, MW-2X, and MW-6X;

MTBE: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-7R, MW-13R, MW-15R, MW-17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-25, MW-26I, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-39I, MW-40D, MW-46, MW-52, MW-59, MW-61, MW-65 through MW-70, MW-2X, MW-6X, and SW-1;

Naphthalene: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-6, MW-7, MW-7R, MWR-11, MW-13R, MW-14R2, MW-17I, MW-18D, MW-19I, MW-25, MW-30I, MW-34D, MW-52, MW-61, MW-62, MW-63, MW-65 through MW-67, MW-69, MW-70, and MW-6X;

EDB: MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-19I, MW-21I, MW-52, MW-54, MW-61 through MW-70, MW-2X, and MW-6X;

1,2-DCA: MW-4, MW-13R, MW-18D, MW-26I, MW-63, MW-64, MW-69, and MW-2X;

Diisopropyl Ether (IPE): MWR-1A, MW-21I, and MW-64;

[1] South Carolina Risk-Based Corrective Action for Petroleum Releases, Bureau of Land and Waste Management, Underground Storage Tank Program, May 15, 2001.

Tert-amyl alcohol (TAA): MWR-1, MWR-1A, MW-4, MWR-4, MWR-4R, MW-6, MW-13R, MW-17I, MW-18D, MW-19I, MW-20D, MW-21I, MW-25, MW-26I, MW-30I, MW-31D, MW-32, MW-33I, MW-34D, MW-35I, MW-36D, MW-39I, MW-40D, MW-52, MW-61, MW-63 through MW-67, MW-69, MW-70, MW-6X, and SW-1;
Tert-amyl methyl ether (TAME): MWR-1, MWR-1A, MW-19I, MW-21I, and MW-64;
Tert-butyl alcohol (TBA): MWR-1, MWR-1A, MW-4, MW-19I, MW-67, and MW-70.

Various petroleum hydrocarbons were also detected in groundwater monitoring wells MW-2, MW-22D, MW-37DD, MW-38, MW-42D, MW-43, MW-44I, and MW-49, however, the concentrations did not exceed South Carolina established RBSLs. Additionally, free-phase petroleum product was discovered in monitoring wells MW-8 (0.58-feet), MW-51 (0.22-feet), and MW-60 (0.01-feet). Historical groundwater analytical results from the groundwater monitoring wells and surface water sampling point associated with the facility are summarized in Tables 2A and 2B and current groundwater CoC concentrations are shown on Figure 3. Laboratory data sheets are provided in Appendix C.

CONCLUSIONS AND RECOMMENDATIONS

Based on the groundwater elevation data obtained during this sampling event, groundwater appears to flow south/southeast from the area of the UST system release. The depth to groundwater in the unconfined aquifer ranges from 7.49-feet bgs (MW-43) to 30.60-feet bgs (MW-25) across the study area. Petroleum constituents detected in the groundwater above RBSLs during the August 2013 groundwater sampling event include: BTEX, MTBE, naphthalene, EDB, 1,2-DCA, IPE, TAA, TAME, and TBA. Free-phase petroleum product was also detected in monitoring wells MW-8 (0.58-feet), MW-51 (0.22-feet), and MW-60 (0.01-feet).

Based on current groundwater CoC concentrations, it appears that the contamination plume is not currently defined horizontally or vertically; therefore, BLE recommends the installation of eight additional shallow groundwater monitoring wells. The proposed locations of the new groundwater monitoring wells are depicted on Figure 4.

Additionally, BLE recommends a 96-hour MMPE event be conducted to 1) remove residual free-phase product from the area around each extraction point, 2) remove petroleum hydrocarbon vapors from the unsaturated zone, and 3) remove petroleum-impacted groundwater (mass) from the subsurface. We recommend performing the MMPE event on the following wells: MWR-4R, MW-52, MW-61, MW-62, MW-63, MW-64, MW-65, MW-66, MW-67, MW-68, MW-69, and MW-70. Temporary vacuum will be applied to the remaining monitoring wells exhibiting free-product during the MMPE event on an as-needed basis.

Approximately 30 days after completion of the MMPE event, we recommend a comprehensive groundwater sampling event be performed to evaluate contaminant trends on the site and to evaluate the effectiveness of the MMPE event at removing free-phase petroleum product and reducing concentrations of petroleum compounds in the groundwater.

QUALIFICATION OF REPORT

The activities and evaluative approaches used in this assessment are consistent with those normally employed in hydrogeological assessments of this type. Our evaluation of site conditions has been based on our understanding of the site and project information and the data obtained in our exploration.

This report has been prepared on behalf of and exclusively for the use of Mr. Neil Alexander. This report and the findings contained herein shall not, in whole or in part, be used or relied upon by any other party without BLE's prior written consent. Any unauthorized use or distribution of BLE's work shall be at third parties risk and without liability to BLE.

NOTES:

Groundwater levels were measured on August 12, 2013 and August 13, 2013.

Historical monitoring well construction and groundwater elevation data prior to 2013 were obtained from the *Report of Assessment Activities* and the *Report of Monitoring Well Installation* by Midlands Environmental Consultants, Inc. dated June 5, 2007 and September 5, 2008, respectively.

Measurements are in feet.

BTOC - below top of casing

BGS - below ground surface

* - Depth to groundwater has been corrected for the presence of free product using the specific gravity of 0.70 g/ml.

Notes:
Historical free-product thickness measurements and laboratory analytical data prior to 2013 were obtained from the *Report of Assessment Activities* by Midlands Environmental Consultants, Inc. dated June 5, 2007.
MTBE = Methyl tertiary butyl ether
EDB = 1,2-Dibromoethane
1,2-DCA = 1,2-Dichloroethane
µg/liter = micrograms/liter = approximate Parts Per Billion (ppb)
Bold cells indicate detections
Shaded cells indicate concentrations above RBSLs
ND = Not Detected at the Method Detection Limit
NT = Not Tested
J = estimated value between practical quantitative limit and method detection limit.
RBSL = Risk Based Screening Level

APPENDIX A

MONITORING WELL SAMPLING PROCEDURES AND SAMPLING LOGS

APPENDIX A

MONITORING WELL PURGING AND SAMPLING PROCEDURES

Pursuant to SCDHEC's directive, monitoring wells were purged prior to sample collection to remove any stagnant water from the well so that the samples collected were representative of the groundwater quality in the vicinity of each well. For wells that recovered quickly, a minimum of three volumes of water were evacuated. Specific conductance, pH, turbidity, and water temperature were measured periodically during well evacuation using instruments which were calibrated daily. Wells that were evacuated to dryness with less than three well volumes being removed were sampled as soon as the well had recovered enough to yield sufficient volume for a sample.

The monitoring wells were purged using a 4-foot long by 1.6-inch diameter disposable polyethylene bailer attached to an unused polypropylene cord. The wells were also sampled using a bailer as described above. To minimize the potential for cross-contamination between wells, a new clean bailer was used at each well.

STREAM (SURFACE WATER) SAMPLING PROCEDURES

Surface water samples were collected using the following field procedure:

1. The sample handler donned a new pair of latex gloves prior to collection of each sample.

2. With the appropriate sample caps unscrewed the sample container was carefully lowered below the water level upstream from the sampler and without touching any floating material or dislodging Teflon® discs inside the caps.

3. The samples were collected into 40-ml VOC vials and were filled to the top without headspace. Care was taken so that the acids in the bottles did not contact the sampler's gloves and thus pass to other caps and bottles. The vials were recapped without touching the interior of the cap, and screwed down tightly. Samples were moved to an ice chest where they were labeled, placed in bubble pack bags, and iced down immediately upon collection.

Samples for VOC analysis were placed in laboratory prepared 40-milliliter glass vials with Teflon® lined lids and marked with identifying numbers. The VOC samples were preserved using hydrochloric acid (HCl). The sample containers were maintained at approximately 4° Celsius in a refrigerated sample cooler and shipped to Shealy Environmental Services, Inc. (SC#32010) in West Columbia, South Carolina via courier service for analysis.
