LABORATORY ANALYTICAL DATA SHEETS

Report of Analysis

Bunnell-Lammons Engineering, Inc.
6004 Ponders Court
Greenville, SC 29615
Attention: Dan Osbourne

Project Name: **Country Side 2**

Project Number: **J13-6940-05**

Lot Number: **OH17005**

Date Completed: **09/03/2013**

Lucas Odom
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
Bunnell-Lammons Engineering, Inc.
Lot Number: OH17005

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

EDB by Microextraction

Sample -030 recovered the surrogate above method criteria. No corrective action was required as the sample was non-detect for the target compound.

Samples -034 and -061 were qualified with a "P" as the relative percent difference (RPD) between the two GC columns exceeded method criteria. Per SCDHEC, the lower of the two values has been reported.

Samples -063 and -075 were diluted 10X and 20X respectively due to large detections of the target compound. No corrective action was required as it is known that dilutions of 5X and greater may impact surrogate recoveries.

Sample Summary

1,2-Dibromoethane (EDB)	106-93-4	8011	ND		0.019	0.019	ug/L	1

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,1,1,2-Tetrachloroethane		89	57-137

PQL = Practical quantitation limit
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
H = Out of holding time
ND = Not detected at or above the MDL
J = Estimated result < PQL and ≥ MDL
P = The RPD between two GC columns exceeds 40%
N = Recovery is out of criteria
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

Sample Receipt Checklist (SRC)

Client: BLE Cooler Inspected by/date: tca 8/17/13 Lot #: OH 17005

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Airborne Exp ☐ Other

Yes ☐	No ☑		1. Were custody seals present on the cooler?
Yes ☐	No ☐		2. If custody seals were present, were they intact and unbroken?

Cooler ID/temperature upon receipt: #5 0.1 °C #6 3.0 °C ___ °C ___ °C

Method: ☐ Temperature Blank ☑ Against Bottles

Method of coolant: ☑ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None

If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.

Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other: ___. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☐	No ☐	NA ☑	4. Is the commercial courier's packing slip attached to this form?
Yes ☑	No ☐		5. Were proper custody procedures (relinquished/received) followed?
Yes ☐	No ☐	NA ☑	5a Were samples relinquished by client to commercial courier?
Yes ☑	No ☐		6. Were sample IDs listed?
Yes ☑	No ☐		7. Was collection date & time listed?
Yes ☑	No ☐		8. Were tests to be performed listed on the COC?
Yes ☑	No ☐		9. Did all samples arrive in the proper containers for each test?
Yes ☐	No ☑		10. Did all container label information (ID, date, time) agree with COC? -041
Yes ☑	No ☐		11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐		12. Was adequate sample volume available?
Yes ☐	No ☑		13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑		14. Were any samples containers missing?
Yes ☐	No ☑		15. Were there any excess samples not listed on COC?
Yes ☑	No ☐	NA ☐	16. Were bubbles present >"pea-size" (¼"or 6mm in diameter) in any VOA vials?
Yes ☐	No ☐	NA ☑	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol (<0.2mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?
Yes ☐	No ☐	NA ☑	21. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) ___ were received incorrectly preserved and were adjusted accordingly in sample receiving with ___ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number) -045(3) -060(3) -005(1) -064(2)

Sample(s) -013(2), -024(1), -043(1), were received with bubbles >6 mm in diameter.

Sample(s) ___ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/phenol

Sample labels verified by: ___ Date: ___

Corrective Action taken, if necessary:

Was client notified: Yes ☐ No ☐ Did client respond: Yes ☐ No ☐

SESI employee: ___ Date of response: ___

Comments: -041 Wrong label listed MW-26 DW but time of collection same as on COC
-061 (2) vials labeled MW-53 but time of collection same as MW-52

APPENDIX D

SCDHEC CONTRACTOR CHECKLIST

Contractor Checklist

For each report submitted to the UST Management Division, the contractor will be required to verify that all data elements for the required scope of work have been provided. For items not required for the scope of work, the N/A box should be checked. For items required and not completed or provided, the No box should be checked and a thorough description of the reason must be provided.

Item #	Item	Yes	No	N/A
1	Is Facility Name, Permit #, and address provided?	✓		
2	Is UST Owner/Operator name, address, & phone number provided?	✓		
3	Is name, address, & phone number of current property owner provided?	✓		
4	Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?	✓		
5	Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?			✓
6	Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided?	✓		
7	Has the facility history been summarized?	✓		
8	Has the regional geology and hydrogeology been described?			✓
9	Are the receptor survey results provided as required?			✓
10	Has current use of the site and adjacent land been described?	✓		
11	Has the site-specific geology and hydrogeology been described?			✓
12	Has the primary soil type been described?			✓
13	Have field screening results been described?			✓
14	Has a description of the soil sample collection and preservation been detailed?			✓
15	Has the field screening methodology and procedure been detailed?			✓
16	Has the monitoring well installation and development dates been provided?			✓
17	Has the method of well development been detailed?			✓
18	Has justification been provided for the locations of the monitoring wells?			✓
19	Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?			✓
20	Has the groundwater sampling methodology been detailed?	✓		
21	Have the groundwater sampling dates and groundwater measurements been provided?	✓		
22	Has the purging methodology been detailed?	✓		
23	Has the volume of water purged from each well been provided along with measurements to verify that purging is complete?	✓		
24	If free-product is present, has the thickness been provided?	✓		
25	Does the report include a brief discussion of the assessment done and the results?	✓		
26	Does the report include a brief discussion of the aquifer evaluation and results?			✓
27	Does the report include a brief discussion of the fate & transport models used?			✓

Item #	Item	Yes	No	N/A
28	Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)			✓
29	Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)			✓
30	Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)			✓
31	Have recommendations for further action been provided and explained?	✓		
32	Has the soil analytical data for the site been provided in tabular format?			✓
33	Has the potentiometric data for the site been provided in tabular format?	✓		
34	Has the current and historical laboratory data been provided in tabular format?	✓		
35	Have the aquifer characteristics been provided and summarized on the appropriate form?			✓
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			✓
37	Has the topographic map been provided with all required elements? (Figure 1)	✓		
38	Has the site base map been provided with all required elements? (Figure 2)	✓		
39	Have the CoC site maps been provided?	✓		
40	Has the site potentiometric map been provided?	✓		
41	Have the geologic cross-sections been provided?			✓
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			✓
43	Has the site survey been provided and include all necessary elements? (Appendix A)			✓
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements?	✓		
45	Is the laboratory performing the analyses properly certified?	✓		
46	Has the tax map been included with all necessary elements? (Appendix C)			✓
47	Have the soil boring/field screening logs been provided?			✓
48	Have the well completion logs and SCDHEC Form 1903 been provided?			✓
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			✓
50	Have the disposal manifests been provided?	✓		
51	Has a copy of the local zoning regulations been provided? (Appendix H)			✓
52	Has all fate and transport modeling been provided? (Appendix I)			
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			✓
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?	✓		

Explanation for missing and incomplete information?

WESTMINSTER SC 29693-5534

DEC 0 9 2013

Re: ACA options letter
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742
Release reported January 11, 1993
Monitoring report received November 27, 2013
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) has reviewed the referenced report submitted on your behalf by Bunnell-Lammons Engineering, Inc. The report documents that free-phase product (FPP) and high levels of petroleum contaminants persist in groundwater at the facility. Accordingly, corrective action will be necessary.

Funds from the State Underground Petroleum Environmental Response Bank (SUPERB) Account will soon be available for corrective action. The selected technology must reduce FPP thicknesses and ground-water petroleum contaminants to site-specific target levels (SSTLs) determined by the Division.

The SUPERB Site Rehabilitation and Fund Access Regulations R.61-98 require the UST owner/operator to develop and implement a reasonable, cost-effective corrective action to be performed by a SCDHEC-certified site rehabilitation contractor. As the owner/operator for the referenced release, you may choose one of two options as to how to proceed with this requirement: state lead or owner/operator lead.

State Lead Option:

- If you choose the state lead option, the Division will procure a certified site rehabilitation contractor to perform corrective action on your behalf. The Agency will enter into an enforceable contract with the awarded contractor. As long as you do not interfere with or prohibit work at the facility, you will not be responsible in the event the state-selected contractor does not perform appropriately or does not make satisfactory progress towards achieving established corrective action goals. To choose the state lead option, please sign and return the applicable Permission Form or Right-of-Entry Form within 15 days of the date of this letter.

Owner/Operator Lead Option:

- If you select the owner/operator lead option, you will be required to select a contractor to perform the corrective action. In order to assist you in determining the clean-up technology, time frame, clean-up levels, and associated costs, the Division will prepare a technical specification package and provide copies for you to send to contractors of your choice. In addition, the Division will announce the request for solicitations in the South Carolina Business Opportunities, a bi-weekly state government publication. This announcement will clearly indicate that you will select a contractor to implement the corrective action.
- Compensation to your contractor will be from the SUPERB Account, but you may have the obligation to pay your contractor for any costs not approved by the Agency.
- The Division strongly suggests that a written contract between you and your contractor be developed following the completion of the solicitation process. The parties to this contract would be you and your contractor. The Division's function would be to monitor and ensure progress of corrective action activities.
- If your contractor does not or cannot complete the required corrective action activities, you will be required to find another certified contractor to complete the activities for the remainder of the existing financial approval amount. No additional funding from the SUPERB Account may be allowed. Under Agency regulations, you, as the owner/operator on record, are ultimately responsible to the Agency for the actions of your contractor. The Agency will pursue enforcement actions against you if your contractor does not make satisfactory progress towards achieving established corrective actions goals. To choose the owner/operator lead option, please sign and return the enclosed Active Corrective Action Options Form within 15 days of the date of this letter.

On all correspondence or inquiries regarding this project, please reference UST Permit #06742. If you have any questions, please feel free to contact me by telephone at (803) 898-0655, by fax at (803) 898-0673, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

Re: Concern letter
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742
Petroleum Release reported January 11, 1993
Oconee County

Dear Mr. Maw:

Per your request, the Underground Storage Tank (UST) Management Division is providing you with this update on environmental conditions and liability associated with the referenced facility.

According to Division records, Mr. R. Neil Alexander, has operated ten underground storage tanks (USTs) at the Country Side 2 facility to supply gasoline, diesel fuel and kerosene. Five tanks were abandoned by removal in June 1990. Five tanks installed as replacements in 1990 are currently operated by Mr. William R. Land. The tanks were last inspected on December 3, 2013 and were found to be in regulatory compliance.

On January 11, 1993, the Division received a report that documented a petroleum release at the facility. In response to the initial report of contamination, the Division directed Mr. R. Neil Alexander, the owner/operator on record with the Division, to assess the severity and extent of the petroleum contamination. Assessment work conducted from 1993 to 1998 confirmed and delineated petroleum free-phase product (FPP) and chemicals of concern (CoC) at the site. In August 1999, the Division solicited bids to perform active corrective action (ACA) at the site to reduce the contamination to acceptable levels protective of human health and the environment. The successful bidder, Smith Monitoring and Maintenance, conducted ACA from September 1999 to April 2006. On April 30, 2006, the Division cancelled the ACA due to identification of additional FPP at the site. From 2006 to 2008, assessment work further defined the area impacted by FPP and installed a recovery well network for future ACA. Since 2008, multiple aggressive fluid and vapor recovery (AFVR) events have been conducted as an interim measure to remove FPP. The Division plans to place the release in ACA in the near future.

The referenced release is qualified to receive funding under the conditions of the State Underground Petroleum Environmental Response Bank (SUPERB) Act. This means that reasonable costs up to $1,000,000 can be paid by the SUPERB account for site rehabilitation associated with the releases. Should cleanup costs exceed $1,000,000.00, Mr. R. Neil Alexander, pursuant to state and federal laws, retains responsibility for any additional site rehabilitation and costs associated with the releases. Division records show that a total of $478,953.58 of SUPERB funds has been expended on site rehabilitation to date.

In 1997, the General Assembly amended Section 80 (B) of the SUPERB Act to clarify that persons who hold "indicia of ownership" primarily to protect a security interest in property impacted by a release from a UST are exempt from the requirements to conduct site rehabilitation activities other than necessary abatement actions to eliminate any imminent threat to human health or the environment. The "indicia of ownership" exemption includes those persons who acquire title to property through foreclosure or other means necessary to protect their security interest, provided that person does not participate in the management of the UST and is not otherwise engaged in petroleum production, marketing, or refining. This applies equally to subsequent lenders who acquire the USTs and property through foreclosure in the future.

Please note there are currently no laws or regulations that prohibit the use, sale or development of properties at or near the location of a UST petroleum release. Should the current owner sell the property, the Division requests that the buyer coordinate with the Division to allow for continued access for necessary site rehabilitation activities.

If you have any questions, please contact me by telephone at (803) 898-0655, by fax at (803) 898-0673, or by e-mail at padgetjp@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

Re: ACA options letter- Second request
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742
Release reported January 11, 1993
Monitoring report received November 27, 2013
Oconee County

Dear Mr. Alexander:

In December 2013, the Underground Storage Tank (UST) Management Division of the South Carolina Department of Health and Environmental Control (Agency) sent you correspondence requesting that you choose a corrective action option for the Country Side 2 site. To date, your response has not been received. Accordingly, the Division is sending this second request to you.

The referenced report, submitted on your behalf by Bunnell-Lammons Engineering, Inc., documents that free-phase product (FPP) and high levels of petroleum contaminants persist in groundwater at the facility despite numerous aggressive fluid and vapor recovery (AFVR) events conducted in the release source area. Further, petroleum chemicals of concern have been detected in the headwaters of a creek located down-gradient from the site. Therefore, the Division has determined that corrective action will be necessary to reduce the risk posed by the release to human health and the environment.

Funds from the State Underground Petroleum Environmental Response Bank (SUPERB) Account will soon be available for corrective action. The selected technology must reduce FPP thicknesses and ground-water petroleum contaminants to site-specific target levels (SSTLs) determined by the Division.

The SUPERB Site Rehabilitation and Fund Access Regulations R.61-98 require the UST owner/operator to develop and implement a reasonable, cost-effective corrective action to be performed by a SCDHEC-certified site rehabilitation contractor. As the owner/operator for the referenced release, you may choose one of two options as to how to proceed with this requirement: state lead or owner/operator lead.

State Lead Option:

- If you choose the state lead option, the Division will procure a certified site rehabilitation contractor to perform corrective action on your behalf. The Agency will enter into an enforceable contract with the awarded contractor. As long as you do not interfere with or prohibit work at the facility, you will not be responsible in the event the state-selected

contractor does not perform appropriately or does not make satisfactory progress towards achieving established corrective action goals. To choose the state lead option, please sign and return the applicable Permission Form or Right-of-Entry Form within 15 days of the date of this letter.

Owner/Operator Lead Option:

- If you select the owner/operator lead option, you will be required to select a contractor to perform the corrective action. In order to assist you in determining the clean-up technology, time frame, clean-up levels, and associated costs, the Division will prepare a technical specification package and provide copies for you to send to contractors of your choice. In addition, the Division will announce the request for solicitations in the South Carolina Business Opportunities, a bi-weekly state government publication. This announcement will clearly indicate that you will select a contractor to implement the corrective action.
- Compensation to your contractor will be from the SUPERB Account, but you may have the obligation to pay your contractor for any costs not approved by the Agency.
- The Division strongly suggests that a written contract between you and your contractor be developed following the completion of the solicitation process. The parties to this contract would be you and your contractor. The Division's function would be to monitor and ensure progress of corrective action activities.
- If your contractor does not or cannot complete the required corrective action activities, you will be required to find another certified contractor to complete the activities for the remainder of the existing financial approval amount. No additional funding from the SUPERB Account may be allowed. Under Agency regulations, you, as the owner/operator on record, are ultimately responsible to the Agency for the actions of your contractor. The Agency will pursue enforcement actions against you if your contractor does not make satisfactory progress towards achieving established corrective actions goals. To choose the owner/operator lead option, please sign and return the enclosed Active Corrective Action Options Form within 15 days of the date of this letter.

On all correspondence or inquiries regarding this project, please reference UST Permit #06742. If you have any questions, please feel free to contact me by telephone at (803) 898-0655, by fax at (803) 898-0673, or by e-mail at padgetjp@dhec.sc.gov.

RIGHT-OF-ENTRY FORM

PROPERTY OWNER

UST Permit #06742

If you are the Property Owner or are the authorized representative for that person, but did not own the former or existing underground storage tanks at the time the release was reported, please complete this form.

I, William R. Land II/Alley Antiques, certify that I am the legal owner of the property identified below or serve as the authorized representative for the property owner. I authorize the South Carolina Department of Health and Environmental Control (Agency), or a contractor selected by the Agency, to enter this property at reasonable times only to conduct assessment and corrective action activities, as required. The contractor will be designated as the contractor for the UST owner or operator for only the required environmental site rehabilitation activities. Compensation to the contractor will be from the SUPERB Account and I will have no obligation to pay the contractor. I understand that the Agency or its contractor will notify me of all activities that are necessary prior to their initiation and will promptly provide to me a summary of the data upon request.

Subject: Oconee Monitoring Wells

Joel,

Thanks for taking my call just now about our monitoring well question. To reiterate, during force main construction through the Highways 24 and 59 intersection (Tokeena Crossroads), our project's contractor damaged and subsequently removed two monitoring wells at a Countryside gas station. You and I talked about us grabbing some identifying information on the two wells that were damaged the next time we were on site, but we actually were able to already pinpoint the wells that were damaged. Please see the attached plan sheet. We don't know whether the well caps or pipes are still on site or whether they've been hauled off as debris waste by the contractor, but both well pipes are believed to have been 2" pipes.

You mentioned on the phone that the 2" wells were likely not critical and that if that were to be the case that no further repairs on our part would be necessary. Please correct me if I received that information incorrectly, or if there is in fact anything else we need to do to address the damaged wells.

Thanks so much,

Lee Brackett, P.E.

Re: **Site Specific Work Plan Request**
Groundwater Sampling Contract
Solicitation # IFB-5400007403, PO#4600368640

Dear Mr. Shane:

In accordance with bid solicitation # IFB-5400007403 and the UST Management Division Quality Assurance Program Plan (QAPP), Revision 2.0 it is requested that you submit a Site Specific Work Plan for each site listed below. The plans must be submitted **within 15 business days** to my attention. The project manager for each site will issue a notice to proceed once the plan has been reviewed and approved.

UST Permit	Site Name	County	# samples and requested analysis*	Project Manager
06742	Country Side 2	Oconee	79-BTEXMN, DCA, Oxygenates & EDB	J. Padgett

*The number of samples do not include trip blanks, field blanks, or field duplicate

Please contact me with the sampling schedule before commencing work at these facilities. In addition, a weekly update for each site is required to be submitted via e-mail to the site's project manager and myself. If you have any questions or need further assistance, please contact me at (803) 898-0606 or bryantjc@dhec.sc.gov.

Sincerely,

John C. Bryant, Hydrogeologist

Dear Mr. Bryant,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Site-Specific Work Plan for the referenced site.

On June 8, 2015, MECI personnel performed a site visit to the subject site to evaluate site conditions, locate monitoring wells and identify potential problems for future sampling activities.

If you have any question or comments please feel free to contact us at 803-808-2043.

Sincerely,
Midlands Environmental Consultants, Inc.

Additional Details For This Scope of Work
For example, list wells to be sampled, wells to be abandoned/repaired, well pads/bolts/caps to replace, details of AFVR event, etc.
During the initial site visit, nineteen (18) monitoring wells (MW-R4R, MW-5, MW-8, MW-23, MW-26i, MW-28DD, MW-29, MW-31i, MW-31D, MW-35i, MW-46, MW-50, MW-55, MW-57i, MW-58, MW-3X, MW-4X, and MW-5X) were not located. MECI personnel will make an effort to locate these wells during the sampling event. If any are found to be in good condition, they will be sampled accordingly.
-All other wells were located and found to be in good condition.

Compliance With Annual Contractor Quality Assurance Plan (ACQAP)
Yes Laboratory as indicated in ACQAP? (Yes/No) If no, indicate laboratory information below.
Name of Laboratory: _____
SCDHEC Certification Number: _____
Name of Laboratory Director: _____

Attachments
1. Attach a copy of the relevant portion of the USGS topographic map showing the site location.
2. Prepare a site base map. This map must be accurately scaled, but does not need to be surveyed. The map must include the following:
   - North Arrow
   - Location of property lines
   - Location of buildings
   - Previous soil sampling locations
   - Previous monitoring well locations
   - Proposed soil boring locations
   - Proposed monitoring well locations
   - Legend with facility name and address, UST permit number, and bar scale
   - Streets or highways (indicate names and numbers)
   - Location of all present and former ASTs and USTs
   - Location of all potential receptors

Re: Notice to Proceed-Groundwater sampling/SSWP approval
Groundwater sampling contract
Contract #IFB-5400007403; PO #4600368640
Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; CA #50627 (MECI); CA #50628 (Pace)
Oconee County

Dear Mr. Shane:

In accordance with Contract #IFB-5400007403 and Quality Assurance Program Plan (QAPP) Revision 2.0 for the UST Management Division, the Site-Specific Work Plan (SSWP) Contractor Addendum has been reviewed and approved with the following comment:

- The SSWP states that Midlands did not locate 19 monitoring and recovery well during the reconnaissance but may be able to locate/uncover the wells during sampling activities. On July 15, 2015, Division personnel mobilized to the site to locate/uncover and mark the missing wells. Fifteen of the 19 wells were located/uncovered and marked.
- Monitoring/recovery wells MW-23, MW-25, and MW-54 have been abandoned for road/utility construction.
- Monitoring wells MW-11 and MW-11D? are located under a travel trailer. Please contact Ms. Jackie Broome (daughter) or Mr. Phillip Broome at 864-903-2773 prior to mobilizing to the site to arrange for the trailer to be moved.

In accordance with QAPP Revision 2.0, a status report of the project should be provided on a weekly basis via e-mail. If any quality assurance problems arise, you must contact me within 24 hours via phone or e-mail. In addition, a discussion of the problem(s) encountered (including quality assurance problems), the actions taken, and the results must be included in the final report submitted to the UST Management Division.

Midlands Environmental Consultants, Inc. will perform services at the site on behalf of the release owner/operator (O/O) and payment for the services will be made from the State Underground Petroleum Environmental Response Bank (SUPERB) account. The release O/O has no obligation to pay for this scope of work. Please coordinate access to the facility with the property owner. The Agency grants pre-approval for transportation of virgin petroleum impacted soil and groundwater from the referenced site to a permitted treatment facility. There can be no spillage or leakage in transport. All investigation-derived waste (IDW) must be properly contained and labeled prior to disposal. A copy of the disposal manifest and/or

acceptance letter from the receiving facility that clearly designates the quantity received must be included with the final report. The SUPERB Account will not reimburse for transportation or treatment of soil and/or groundwater with concentrations below RBSLs.

Please note that sampling should be conducted within 15 calendar days from the date of this letter and that the final report is due within 3 weeks from the sampling date. If the site is not sampled by the specified due date or the report is not received in the specified time period, a late fee may be imposed. The final report should contain the requirements of Section III.2.15 of the contract. Please submit the report to John Bryant, the contract manager.

If you have any site-specific questions, please contact me at (803) 898-0655 or via e-mail at padgetjp@dhec.sc.gov. If you have any contract-specific questions, please contact John Bryant at (803) 898-0606 or via e-mail at bryantjc@dhec.sc.gov.

Sincerely,

Joel P. Padgett, P.G., Geologist/Hydrologist

Westminster, South Carolina
SCDHEC Site ID Number 06742, CA #50627
MECI Project Number 15-5222
Certified Site Rehabilitation Contractor UCC-0009

Dear Mr. Bryant,

Midlands Environmental Consultants Inc. (MECI) is pleased to submit the attached Report of Groundwater Sampling for the referenced site. This report describes site activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control's (SCDHEC) Quality Assurance Program Plan for the Underground Storage Tank Management Division (QAPP).

PROJECT INFORMATION

The subject site (Country Side 2) is located at 8050 West Oak Highway in Westminster, Oconee County, South Carolina. The subject site formerly maintained two 1,000 gallon gasoline underground storage tanks (UST's), one 550 gallon gasoline UST, one 550 gallon diesel UST and one 550 gallon kerosene UST. These former UST's were abandoned by removal from the ground in June of 1990. Currently, the site maintains one 8,000 gallon gasoline UST, one 6,000 gallon gasoline plus UST, one 6,000 regular unleaded gasoline UST, one 10,000 off road diesel UST, and one 10,000 gallon diesel UST. The current UST's maintained at the site are in compliance with a compliance date of December 5, 2014. Two releases of petroleum product have been reported to the South Carolina Department of Health and Environmental Control (SCDHEC). Release #1 was reported and confirmed in January of 1993 and remains open. Release #2 was reported and confirmed in January of 2015. Release #2 was issued "conditional no further action" status in January of 2015. The subject site is currently rated a Class 1D.

The above information is based on reports and correspondence obtained from MECI field notes and SCDHEC files.

Post Office Box 854, Lexington SC 29071 • 231 Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

MONITORING WELL SAMPLING AND CHEMICAL ANALYSIS

On August 11 & 12, 2015, MECI personnel collected groundwater samples from fifty-eight (58) monitoring wells at the subject site. Eighteen (18) monitoring wells were gauged during the subject sampling event. Monitoring wells MW-R1, MW-R4, MW-7R, MW-8, MW-51, MW-60, MW-61, MW-63, MW-64, MW-65, MW-66, MW-67, MW-69 and MW-70 were gauged and determined to contain measurable free phase petroleum product. Monitoring wells MW-1, MW-2, MW-3x and MW-4x were gauged and determined to be dry. Monitoring wells MW-3, MW-23, MW-25, MW-54, and MW-5x were not located during sampling activities. Lastly, the surface water (SW-1) was found to be dry and samples were unable to be collected.

Based on the request of SCDHEC, all monitoring wells were to be purged prior to sample collection; however monitoring well MW-4 was unable to purged prior to sample collection due to insufficient water. Fifty-seven (57) monitoring wells were purged prior to sample collection. Prior to sampling, MECI personnel utilized an electronic water level indicator for water level measurements and an oil/water interface probe for free phase petroleum product level measurements. Purging was completed by bailing at least five well volumes of water from the well, until pH, conductivity, dissolved oxygen stabilized or all water was evacuated from the well, whichever occurred first. Sampling/purging was completed utilizing a prepackaged, clear, disposable polyethylene bailer and nylon rope. A new set of nitrile gloves were worn at each monitoring well, and at all time samples were handled. Field measurements of pH, conductivity, dissolved oxygen, water temperature, and turbidity were obtained before well sampling process. MECI utilized YSI550A meter for DO (mg/L) and temperature readings (°C), YSI63 meters for pH and conductivity (uS) readings and a MicroTPI/TPW turbidimeter for turbidity readings (NTU). The attached Field Data Information Sheets presents the results of the field measurements obtained. The wells were sampled in accordance with SCDHEC's Quality Assurance Program Plan for the Underground Storage Tank Management Division (QAPP Revision 2.0) and MECI's Standard Operating Procedures (MECI SOP, Dates January 2014).

Groundwater samples obtained were sent to Pace Analytical Services, Inc. of Huntersville, NC (SCDHEC Laboratory Certification #99006001) for analysis.

The following sampling matrix contains well development and requested analyses for each well:

Notes: : BTEX = benzene, toluene, ethylbenzene, & total xylenes MTBE=methyl tertiary butyl ether 1,2 DCA = 1,2 dicloroethane
PAH = polycyclic aromatic hydrocarbons

There was total of 455.75 gallons of purge water produced at the subject site.

Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Kyle V. Pudney
Project Scientist

Contractor Checklist

Item#	Item	Yes	No	N/A
1	Is Facility Name, Permit #, and address provided?	X		
2	Is UST Owner/Operator name, address, & phone number provided?			X
3	Is name, address, & phone number of current property owner provided?			X
4	Is the DHEC Certified UST Site Rehabilitation Contractor's Name, Address, telephone number, and certification number provided?	X		
5	Is the name, address, telephone number, and certification number of the well driller that installed borings/monitoring wells provided?			X
6	Is the name, address, telephone number, and certification number of the certified laboratory(ies) performing analytical analyses provided?	X		
7	Has the facility history been summarized?	X		
8	Has the regional geology and hydrogeology been described?			X
9	Are the receptor survey results provided as required?			X
10	Has current use of the site and adjacent land been described?			X
11	Has the site-specific geology and hydrogeology been described?			X
12	Has the primary soil type been described?			X
13	Have field screening results been described?			X
14	Has a description of the soil sample collection and preservation been detailed?			X
15	Has the field screening methodology and procedure been detailed?			X
16	Has the monitoring well installation and development dates been provided?			X
17	Has the method of well development been detailed?			X
18	Has justification been provided for the locations of the monitoring wells?			X
19	Have the monitoring wells been labeled in accordance with the UST QAPP guidelines?			X
20	Has the groundwater sampling methodology been detailed? (For detailed specifics, See MECI's SOP on file with SCDHEC)	X		
21	Have the groundwater sampling dates and groundwater measurements been provided? See attached Site Activity Summary Sheet	X		
22	Has the purging methodology been detailed? (For detailed specifics, See MECI's SOP on file with SCDHEC)	X		
23	Has the volume of water purged from each well been provided along with measurements to verify that purging is complete? See attached Field Data Information Sheets	X		
24	If free-product is present, has the thickness been provided? See attached Site Activity Summary Sheets	X		
25	Does the report include a brief discussion of the assessment done and the results?			X
26	Does the report include a brief discussion of the aquifer evaluation and results?			X
27	Does the report include a brief discussion of the fate & transport models used?			X

Item#	Item	Yes	No	N/A
28	Are the site-conceptual model tables included? (Tier 1 Risk Evaluation)			X
29	Have the exposure pathways been analyzed? (Tier 2 Risk Evaluation)			X
30	Have the SSTLs for each compound and pathway been calculated? (Tier 2 Risk Evaluation)			X
31	Have recommendations for further action been provided and explained?			X
32	Has the soil analytical data for the site been provided in tabular format? (Table 1)			X
33	Has the potentiometric data for the site been provided in tabular format? (Table 2)			X
34	Has the current and historical laboratory data been provided in tabular format?			X
35	Have the aquifer characteristics been provided and summarized on the appropriate form?			X
36	Have the Site conceptual model tables been included? (Tier 1 Risk Evaluation)			X
37	Has the topographic map been provided with all required elements? (Figure 1)		X	
38	Has the site base map been provided with all required elements? (Figure 2)	X		
39	Have the CoC site maps been provided? (Figure 3 & Figure 4)			X
40	Has the site potentiometric map been provided? (Figure 5)			X
41	Have the geologic cross-sections been provided? (Figure 6)			X
42	Have maps showing the predicted migration of the CoCs through time been provided? (Tier 2 Risk Evaluation)			X
43	Has the site survey been provided and include all necessary elements? (Appendix A)			X
44	Have the sampling logs, chain of custody forms, and the analytical data package been included with all required elements? (Appendix B)	X		
45	Is the laboratory performing the analyses properly certified?	X		
46	Has the tax map been included with all necessary elements? (Appendix C)			X
47	Have the soil boring/field screening logs been provided? (Appendix D)			X
48	Have the well completion logs and SCDHEC Form 1903 been provided? (Appendix E)			X
49	Have the aquifer evaluation forms, data, graphs, equations, etc. been provided? (Appendix F)			X
50	Have the disposal manifests been provided? See attached	X		
51	Has a copy of the local zoning regulations been provided? (Appendix H)			X
52	Has all fate and transport modeling been provided? (Appendix I)			X
53	Have copies of all access agreements obtained by the contractor been provided? (Appendix J)			X
54	Has a copy of this form been attached to the final report and are explanations for any missing or incomplete data been provided?	X

Water Supply Well **Public** _____ **Private** _____

Monitoring Well Diameter (D): 2 inches

Conversion Factor (C): 3.14 x $(D/2)^2$ for a 2 inch well C=0.163
for a 4 inch well C=0.652

* Free Product Thickness:				feet
Depth to Free Product (DFP)				feet
Depth to Ground Water (DGW)	25.87			feet
Total Well Depth (TWD)	45			feet
Length of the water column (LWC=TWD-DGW)			19.13	feet
1 casing volume (CV=LWC X C)= ____ X		0.163	3.12	gallons
5 casing volume (5 X CV)=		5	15.59	gallons

Total Volume of Water Purged Before Sampling 7 gals.

*If free product is present over 1/8 inch, sampling will not be required.

Cumulative Volume Purged (gallons)	Inital	1st Vol	2nd Vol	3rd Vol	4th Vol	5th Vol	Post Sampling	
Time (military)	16:41	16:44	16:47					
pH (s.u.)	5.77	5.74	5.69					
Specific Conductivity (µmhos/cm)	52.2	41.1	38.7					
Water Temperature (°C)	21.2	19.6	19.4					
Dissolved Oxygen	1.16	1.27	1.21					
Turbidity (NTU)	19.1	127.8	204.6					
PID readings, if required								

Remarks: Sample Time: 16:47 **Dry @ 7.00 Gallons**

Re: Treatment of Purge Water
Country Side 2
Westminster, South Carolina
SCDHEC Site ID Number 06742
MECI Project Number 15-5222

To Whom It May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The purge/bail water from all wells is mixed before usage of the Activated Carbon Unit.
2. No free-product was detected in any of the purge water drums.
3. Analytical results of from well sampling show average concentrations of petroleum hydrocarbon constituents less than 5000 parts per billion (ppb) Benzene and less than 20,000 ppb total BTEX.
4. The existing carbon pack will be replaced/reactivated every 5,000 gallons.
5. Record of usage is maintained by Contractor.
6. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.
7. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

Post Office Box 854, Lexington SC 29071 • 231 Dooley Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

A total of 455.75 gallons were disposed on August 11 & 12, 2015, at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Kyle V. Pudney
Project Biologist

RE: Project: COUNTRY SD 2 CA#50628 UST06742
Pace Project No.: 92263328

Dear Mr. Bryant:
Enclosed are the analytical results for sample(s) received by the laboratory on August 13, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Trey Carter

QUALIFIERS

Project: COUNTRY SD 2 CA#50628 UST06742
Pace Project No.: 92263328

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

C2	Relative percent difference between results from each column was greater than 40%. The lower of the two results was reported.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
P5	The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.
S0	Surrogate recovery outside laboratory control limits.
S3	Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
S5	Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

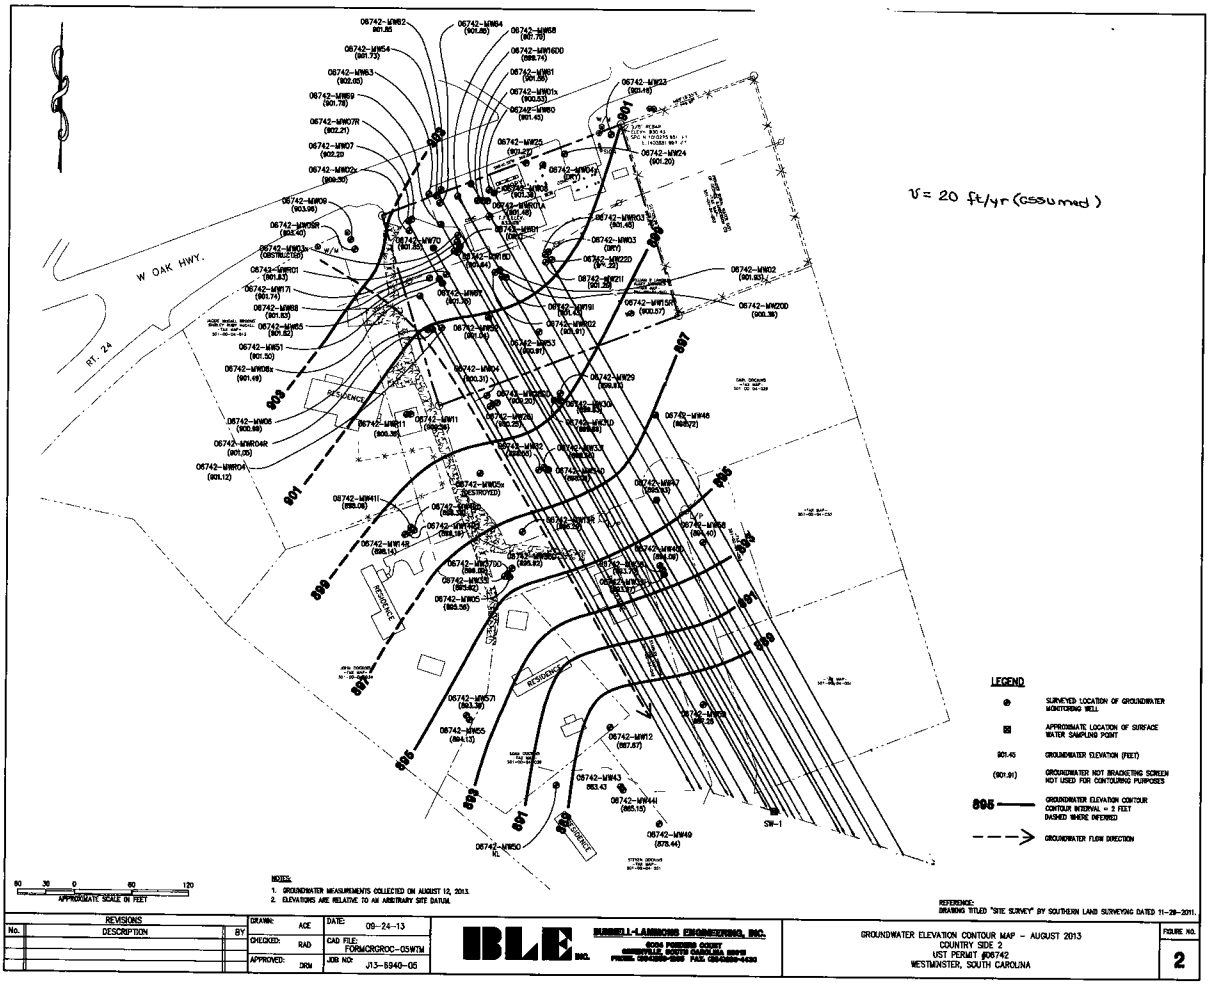
FP- free-phase product
na- not analyzed
nd- not detected
nm- not measured
ns- not sampled



v = 20 ft/yr (assumed)

NOTES:
1. GROUNDWATER MEASUREMENTS COLLECTED ON AUGUST 12, 2013.
2. ELEVATIONS ARE RELATIVE TO AN ARBITRARY SITE DATUM.

REFERENCE:
DRAWING TITLED "SITE SURVEY" BY SOUTHERN LAND SURVEYING DATED 11-29-2011.

PROGRAM

UNDERGROUND STORAGE TANK (UST)
OWNER/OPERATOR LEAD INFORMATION SHEET

1. CONTRACTOR OF CHOICE

06742

As the UST Owner/Operator of UST Permit # 6742, I would like to use the contractor or person(s) listed below and request that they represent me for:

☐ Current Work Scope Only
☑ All future assessment scopes **

Name of Contractor/Person(s) BUNNELL-LAMMONS ENGINEERING

Address 6004 PONDERS COURT

GREENVILLE, SC

29615

Telephone Number (864) 288-1265

Note: After September 20, 1997, rehabilitation activities must be performed by a SC Certified Site Rehabilitation Contractor.

*Indicate if the person listed is your own employee

**** If you would like the contractor to perform all future assessment activities at this and/or other UST sites that have confirmed releases, please provide a list of all sites on your letterhead and provide the information requested in items 2 and 3 below within the context of the letter.**

2. FINANCIAL OR FAMILIAL RELATIONSHIP

Does a financial or familial relationship, as defined below, exist between you and the contractor/person that you listed above?
_____ Yes ___✓___ No (please initial)

Financial Relationship: A connection or association through a material interest of sources of income, which exceed five percent of annual gross income from a business entity.

Familial Relationship: A connection or association by family or relatives, in which a family member or relative has a material interest. Family or relatives include: father, mother, son, daughter, brother, sister, uncle, aunt, first cousin, nephew, niece, husband, wife, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, grandparent, grandchild, great grandchild, step grandparent, step great grandparent, step grandchild, step great grandchild, or fiancé.

3. PAYMENT

You can pay the contractor and, upon the submittal of the canceled check (front and back) or a notarized statement from the contractor verifying payment, be compensated from the SUPERB Account, or have payment issued directly from the SUPERB Account to the contractor. (Check one)

_____ I request that payment be made to me after I have paid the contractor.

___✓___ I request that payment be made directly to the contractor.

(Note: all costs must receive prior financial approval from the Department regardless of payment option.)

DIVISION OF UNDERGROUND STORAGE TANK MGMT

UNDERGROUND STORAGE TANK AND PROPERTY OWNER

PERMISSION FORM - FACILITY ID #(06742)

If you are the owner of the former or existing underground storage tanks and the property owner, please complete this form.

I, R. NEIL ALEXANDER, certify that I am the legal owner of the underground storage tanks and property located at the facility identified below or serve as the authorized representative for the owner. I grant permission to the South Carolina Department of Health and Environmental Control (SCDHEC) to secure on my behalf contractor services to conduct assessment and corrective action activities as required, and authorize SCDHEC, or a contractor selected by SCDHEC, to enter this property at reasonable times only to accomplish these site rehabilitation tasks. The contractor(s) will be designated as my contractor for only the required site rehabilitation activities. Compensation to the contractor(s) will be from the SUPERB Account and I will have no obligation to pay the contractor(s). I understand that SCDHEC will be responsible for notifying me of all activities that are necessary prior to their initiation and will promptly provide to me a copy of each environmental report. I understand that I may choose to select my own contractor at the completion of any phase of work by notifying the Division of Underground Storage Tank Management in writing.

Name of Facility CROSSROADS GROCERY Phone # 864-972-3489

Street Address of Facility 8050 W. OAK Hwy.

Town, City, District, Suburb WESTMINSTER, S.C. 29693

UNDERGROUND STORAGE TANK AND PROPERTY OWNER

PERMISSION FORM - FACILITY ID #(06742)

If you are the owner of the former or existing underground storage tanks and the property owner, please complete this form.

I, R. Neil Alexander, certify that I am the legal owner of the underground storage tanks and property located at the facility identified below or serve as the authorized representative for the owner. I grant permission to the South Carolina Department of Health and Environmental Control (SCDHEC) to secure on my behalf contractor services to conduct assessment and corrective action activities as required, and authorize SCDHEC, or a contractor selected by SCDHEC, to enter this property at reasonable times only to accomplish these site rehabilitation tasks. The contractor(s) will be designated as my contractor for only the required site rehabilitation activities. Compensation to the contractor(s) will be from the SUPERB Account and I will have no obligation to pay the contractor(s). I understand that SCDHEC will be responsible for notifying me of all activities that are necessary prior to their initiation and will promptly provide to me a copy of each environmental report. I understand that I may choose to select my own contractor at the completion of any phase of work by notifying the Division of Underground Storage Tank Management in writing.

Name of Facility Crossroads Grocery Phone # 864-972-3489

Street Address of Facility 8050 W. Oak Hwy.

Town, City, District, Suburb Westminster, S.C. 29693

Name of nearest intersecting street, road, highway, alley
Hwy. 24 or 59.

Is this facility within the city limits? (yes or no) No

Is this facility serviced by a public water or sewer utility? (yes or no) No, if no, please provide the name and phone number of a person that we can contact that can assist in the location of private water and septic tank lines Self, phone number Same

Were underground storage tanks previously removed from the ground at this facility? (yes or no) YES, if yes, please provide the name of a person we can contact that can assist in the location of the former underground storage tank excavation Randy McCorkle,
Phone number 864-882-6708

Is the property currently leased or rented to someone? (yes or no) No, if yes, please provide their name _____ and phone number _____ and let them know about the pending assessment activities. If vehicles or other mobile structures are parked over the former or existing underground storage tanks, they should be moved before SCDHEC's contractor gets to the site.

Re: **Notice to Proceed**
Former Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742, CA #25711
Bid #SB-26144-7/27/04-EMW; PO #543967
Oconee County

Dear Mr. Shane:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) requests an two 8-hour Aggressive Fluid Vapor Recovery (AFVR) events to remove free-phase product documented on August 3, 2005 in monitoring wells MWR-1 (0.01 feet), MWR-4R (0.96 feet), and MW-8 (0.26 feet), and reduce dissolved CoC concentrations in MWR-4. This work is being directed to assist ongoing pay-for-performance corrective action being conducted by Smith Monitoring and Maintenance Engineering at the referenced site. Please conduct the first event on MW-8 and MWR-1 and the second event on MWR-4 and MWR-4R. Midlands Environmental may proceed with the AFVR events upon receipt of this correspondence.

An AFVR report and final invoice are due within **60 days** from the date of this letter. Cost Agreement #25711 has been approved in the amount shown on the enclosed cost agreement spreadsheet for the AFVR events, and will be kept on-file for compensation from the SUPERB Account. SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with bid number SB-26144-7/27/04-EMW. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable, and the right to audit project records at any time during the project or after completion of the work.

Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this cost agreement, any associated changes to this cost agreement must be pre-approved by the Department in order for Midlands Environmental Consultants to seek compensation. Any item(s) not clearly or completely addressed in the report (disposal manifest for generated ground water, etc.) WILL NOT be compensated from the SUPERB Account.

The UST Program grants pre-approval for transportation of free-phase product and petroleum-contaminated groundwater from the referenced site to a permitted treatment facility. The free-phase product and petroleum-contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included in the report.

On all correspondence regarding this site, please reference UST Permit #06742 and Cost Agreement #25711. If you have questions concerning this correspondence, please contact me by phone at (803) 896-6398, by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Re: Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit # 06742
Aggressive Fluid Vapor Recovery Report received March 26, 2007
Oconee County

Dear Mr. Land:

As you may be aware, an Aggressive Fluid and Vapor Recovery (AFVR) event was conduced by Midlands Environmental Consultants, Incorporated on January 30, 2007 and a second event on March 18, 2007. The first AFVR report documented free phase product in excess of one foot thick was present in monitoring well MW-8 before the first event, but was less than two inches before the march event. Free phase product was approximately one and a half foot thick in monitoring well MWR-1 before the second event. Free phase product was not detected in any monitoring wells immediately after the second AFVR event. A copy of the report for the second AFVR event is enclosed for your information.

Midlands Environmental Consultants, Incorporated is currently installing additional monitoring wells to better define the problem so additional cleanup activities may be conducted in the future. You will be provided a copy of the reports once these activities have been completed. Costs for this and future rehabilitation activities for the release reported on January 11, 1993 are being paid directly to the contractor from the State Underground Petroleum Environmental Response Bank (SUPERB) Account.

Your continued cooperation is appreciated. On all correspondence regarding this site, please reference UST permit number 06742. Please feel free to contact me at (803) 896-6669, fax me at (803) 896-6245, or e-mail me at shradeaa@dhec.sc.gov, if you have questions or need additional information.

Re: Country Side 2, 8050 West Oak Highway, Westminster, SC
UST Permit # 06742
Adjacent property belonging to Carl Dockins and Stanley Dockins
Telephone Conversation with Carl Dockins on March 14, 2007
Oconee County

Dear Mr. Dockins:

In response to our conversation, the following information about environmental conditions and liability associated with the referenced facility and adjacent property is provided.

Our records indicate Neil Alexander registered ten Underground Storage Tanks (USTs) with the Department. Mr. Alexander removed five of the USTs from the ground in June 1990. The remaining five tanks are currently in operation and were transferred to Mr. William Land of Alley Antiques on January 2, 2004. The USTs were last inspected by the Department on November 26, 2006 and found to be in compliance with all state and federal requirements. An assessment report received in June 1998 documented a release of petroleum products in the vicinity of the UST. Our records indicate Mr. Neil Alexander complied with the regulatory requirements and stopped the leak from the tanks. Additionally, he is currently pursuing the extent and severity of petroleum chemicals of concern under our direction. As you are aware, additional assessment activities are ongoing by Midlands Environmental Consultants, Incorporated. An assessment report is expected to be received by the end of May. You will be provided a copy of the assessment report as soon as it is received.

This release of petroleum products from the USTs is qualified to receive funding under the conditions of the State Underground Petroleum Environmental Response Bank (SUPERB) Act. This means that reasonable costs up to $1,000,000 can be paid by the SUPERB account for site rehabilitation actions associated with this release. Should cleanup costs exceed $1,000,000, Mr. Neil Alexander under state and federal law, retains responsibility for any additional actions and associated costs.

Should the potential exist for petroleum chemicals of concern to migrate onto an adjacent property, the UST owner/operator and the Department may require access during reasonable hours to perform necessary rehabilitation activities. All rehabilitation activities associated with the petroleum impact are the responsibility of the Mr. Neil Alexander. You should be aware that there are currently no laws or regulations that prohibit the use or development of adjacent properties and properties where petroleum release has occurred.

Upon completion of the assessment activities, this release may proceed to corrective action. The UST owner/operator and the Department will require access to your property during reasonable hours to perform necessary rehabilitation activities. You will be contacted by letter before corrective action is initiated. Rehabilitation activities remain the responsibility of the Mr. Neil Alexander.

If you have any questions, please do not hesitate to call me at (803) 896-6669 or e-mail me at shradeaa@dhec.sc.gov.

Sincerely,

Arthur Shrader, Hydrogeologist

Re: Bid # IBF-30519-8/8/06-EMW; PO # 646282
Notice to Proceed

Dear Mr. Shane:

Based on the award of the referenced bid package, enclosed are the information packets to conduct Aggressive Fluid Vapor Recovery (AFVR) event at several facilities. The packets contain the necessary approval for work to begin. You may commence with a site reconnaissance before the AFVR. If monitoring wells do not contain measurable free phase product, contact the UST project manager for further instructions. The facilities have been assigned Cost Agreement (CA) numbers as listed below. Please reference the CA numbers and Purchase Order # 646282 on the appropriate invoices submitted for payment against the facilities. As specified in the referenced bid, **the completed invoice forms and associated reports (include contract certification number) are expected on or before the designated due date (see below).**

UST Permit #	Facility	County	Release #	Work Scope	Due Date*	CA #	Approved Amt

*From receipt of letter

Midland's Environmental Consultants, Inc. will perform services at the sites on behalf of the site's UST owners; however, payments will be made from the SUPERB Account. The site's UST owners have no obligation for payment for this scope of work. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained.

If for any reason there are changes in these cost agreements, any associated changes to this cost agreement must be pre-approved by this Department in order for Midlands Environmental Consultants to seek future cost compensation. Please contact the site's project manager for technical and/or financial approval.

Any item(s) not clearly or completely addressed in the report (disposal manifest for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account.

The Department grants pre-approval for transportation of free phase product and petroleum contaminated groundwater from the referenced site to a permitted treatment facility. The free product and contaminated groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included as an appendix to the report.

If you have any questions concerning this correspondence or need further assistance, please contact me by phone at (803) 896-6664, by fax at (803) 896-6245 or by email at milenkmp@dhec.sc.gov.

Monitoring Well Installation Approval Form

Approval is hereby granted to: Midlands Environmental Consultants, Incorporated
Facility: Country Side 2, 8050 West Oak highway, Westminister, SC
UST Permit Number: 06742
County: Oconee

This approval is for the installation of up to forty (40) temporary, thirty (30) shallow, and seven (7) deep pit cased monitoring wells. The monitoring wells are to be installed in the approved locations. Monitoring wells are to be installed following the South Carolina Well Standards, R.61-71, and the applicable guidance documents.

Please note that R.61-71 requires the following:

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.

2. All monitoring wells shall be labeled as required by R.61-71.H.2.c.

3. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless another schedule has been approved by the Department. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f

4. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.

5. If any of the information provided to the Department changes, notification to Arthur Shrader (tel: (803) 896-6669 or e-mail: shradeaa@dhec.sc.gov) shall be provided a minimum of twenty-four (24) hours prior to well construction as required by R.61-71.H.1.a.

6. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c. All other wells shall be properly developed per R.61-71.H.2.d.

7. Departmental approval is required prior to abandonment of all monitoring wells as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002. A copy of this approval should be on the site during well installation.

Date of Issuance: **February 15, 2006** **Approval #:** **UMW-19810**

Westminster, South Carolina

Dear Mr. Motts,

This letter is in response to your proposal of April 26. This proposal is acceptable to Smith Monitoring & Maintenance Engineering, Inc.

We plan to be on-site not later than the third week of May to assess compliance with DHEC's condition for SMME to remove remediation items and investigative-derived wastes from the site.

Thank you for your efforts in this matter.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

Re: Former Cross Roads Grocery, 8050 West Oak Hwy, Westminster, SC, Oconee County
UST Permit #06742
Bid #SB-6672-07/29/99-REB; PO #191160
Release reported April 27, 1987
Proposed contract cancellation

Dear Mr. Smith:

Pursuant to your telephone conversation with Joel Padgett in early April 2006, the UST Program is proposing cancellation of the referenced corrective action contract so that additional free-phase product assessment and an alternate remediation technology can be pursued. The release of Smith Monitoring from the contract is in accordance with Special Condition #12 and Specification #6 of the contract that allow cancellation in the event that unforeseen geological conditions or additional CoC are identified. The following contingencies apply to the cancellation:

- No further payments from the SUPERB fund will be made for the scope of work defined in the referenced corrective action contract.
- Smith Monitoring will not be required to abandon the existing monitoring wells at the site. However, all remediation items and investigative-derived waste (drums, etc.) must be removed from the site.

Upon verification that all remediation items and investigative-derived waste have been removed from the site, the Program will return the associated performance bond to Smith Monitoring.

If this proposal is acceptable to you, please submit your written acceptance to the Program on or before May 1, 2006. On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions regarding this correspondence, feel free to contact me by telephone at (803) 896-6677, by fax at (803) 896-6245, or by e-mail at montsla@dhec.sc.gov.

Re: Former Cross Road Grocery, UST Permit #06742
Westminster, South Carolina

Dear Mr. Padgett,

This letter is in response to the Corrective Action Section's correspondence of September 8, 2005. In the referenced letter, the State offered to conduct two AFVR events on the Former Cross Roads Grocery site. Should measurable product still be present an additional series of AFVR events will be scheduled.

SMME is in concurrence with this plan of action. It is understood that the cost of the proposed events will be paid from remaining balance of our Cost Agreement #09283. Please proceed with these efforts. If possible, we would like to be advised, by e-mail or phone, of MEC's schedule concerning this site.

Thank you for your efforts in this matter.

Re: Former Cross Roads Grocery, 8050 West Oak Hwy, Westminster, SC, Oconee County
UST Permit #06742; CA #09283
Bid #SB-6672-07/29/99-REB; PO #191160
Release reported April 27, 1987
Proposed Contract Amendment

Dear Mr. Smith:

Pursuant to our discussion during the on-site meeting on August 3, 2005, the UST Program is considering an option to expedite progress in meeting the terms and conditions of the referenced solicitation. If agreeable, the UST Program will direct a series of two aggressive fluid and vapor recovery (AFVR) events to remove measurable free-phase product from the site using Midlands Environmental Consultants who is on contract for this type of service. One eight-hour AFVR event will be conducted on monitoring wells MWR-1 and MW-8, and another eight-hour event will be conducted on monitoring wells MWR-4 and MWR-4R. The Program will notify Smith Monitoring and Maintenance at the conclusion of the events and provide a copy of the AFVR report and a sampling/gauging date for the next CASE report. Should sampling/gauging indicate that measurable free-phase product persists at the site, the Program will schedule another series of AFVR events. This is a proposed amendment to the current contract and would represent a decrease in the dollar amount to be paid to Smith Monitoring and Maintenance Inc. The cost of each eight-hour AFVR event is approximately $1,200.00, and the actual costs would be subtracted from the balance remaining for the referenced bid against Cost Agreement #09283 ($34,876.50 as of the date of this correspondence). Payment from the SUPERB Account would be made directly to Midlands Environmental Consultants.

If this approach is acceptable to Smith Monitoring and Maintenance, please indicate such in writing on or before September 30, 2005.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions regarding this correspondence, feel free to call me at (803) 896-6398 or (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

K. Handling Codes for Wastes Listed Above: Ref Code #136 in the event of a spill or emergency

15. Special Handling Instructions and Additional Information

Public reporting burden for this collection of information is estimated to average: 37 minutes for generators, 15 minutes for transporters, and 10 minutes for treatment storage and disposal facilities. This includes time for reviewing instructions, gathering data, and completing and reviewing the form. Send comments regarding the burden estimate, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM-223, U.S. Environmental Protection Agency, 401 M St., S.W., Washington, D.C. 20460, and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, D.C. 20503.

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations and the laws of the State of South Carolina.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

SMITH

Monitoring & Maintenance Engineering, Inc.

June 11, 2005

RECEIVED
JUN 15 2005
UNDERGROUND STORAGE
TANK PROGRAM

Mr. Lee Monts, Manager
Southwestern SC Corrective Action Section
Underground Storage Tank Program
2600 Bull Street
Columbia, South Carolina 29201-1708

Re: State Claim of Contract Breach; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Mr. Monts,

This letter is provided as a brief summary of this company's claim that the referenced site has suffered from either an additional release or a continued release since the original release report date of January 11, 1993 (the basis for our contract).

SMME conducted vacuum-enhanced product recovery in either late 1999 or early 2000. Our contractor, Augusta Industrial, is still trying to locate the disposal manifest related to this work. The biologically based treatment system was installed and started on January 11, 2000. Based on our report of the sampling event conducted September 25, 2000 (confirmed through split sampling with a representative of the State), product had been removed from the site.

In February of 2001, product reappeared at the site. FAP pumps were purchased and direct product recovery was initiated. During the sampling conducted July 19, 2001 product was found in the up-gradient well MWR-1. It was this occurrence that prompted SMME to request forensic analysis be conducted on this product. Again, in sampling conducted August 26, 2003, product was found in the monitoring well closest to the active fuel pumps. Forensic analysis was requested and performed. The results of these analyses and the conclusions of the forensic experts are included as an attachment to this letter. The results indicated that the concentrations of the highly volatile n-butane and n-propane were still present in the samples showing that either there exists a continuing source of product or an additional release occurred within the prior five years.

Up until the time that it became evident that the additional product was still coming from an up-gradient source, SMME conducted corrective action in the operation of the PHOSter system and active product recovery. Four drums of product still exist, on site. This product was recovered after the reoccurrence documented during the February 2001 sampling event. It was beyond our responsibility to recover this material and beyond our contract scope to dispose of it. If Augusta Industrial can produce documentation of the amount of product extracted during the vacuum-recovery events, this will be provided.

145 Merrill Avenue Decatur, Georgia 30030
Phone: 404 371-9332 FAX: 404 373-3296

SMME cannot continue this project based on SCDHEC unwillingness to consider the product reoccurrence as a new release. The new or continuing source must be determined should any contractor be required to remediate the site.

SMME is willing to terminate this contract, at no additional cost to the State but will not accept termination based on failure to perform. Our bonding company is advised of this situation by copy of this letter.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

UST Permit #06742
Forensic Evaluation Results received December 23, 2003
Oconee County

Dear Mr. Smith:

Please find enclosed the free product PIANO analysis results referenced above. According to this report, the product found in monitoring wells MW-1R and MW-8 is consistent with a release that may have occurred within the past 5 years. The results have been forwarded to our Regulatory section to determine if a new release has occurred. You will be notified of the Regulatory decision.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions concerning this correspondence, please contact me by phone at (803) 896-6586, (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by email at dorankm@dhec.sc.gov.

Sincerely,

Karen M Doran

December 17, 2003

Karen Doran, Project Manager
SCDHEC, UST Program
2600 Bull St.
Columbia, SC 29201

Dear Ms. Doran:

Included are the results from the additional testing of material submitted on October 2, 2003 from the 06742, F&BI 310020 project.

The additional testing completed at Friedman and Bruya, Inc. (F&BI) included testing of the sample MW-8 for paraffin, isoparaffin, aromatice, naphthene, and olefin (PIANO) constituents using a modification of ASTM Method D5134-92. This method has been modified to include the use of a mass spectrometer and has been extended to include the analysis of a wider boiling range of compounds. The results of this testing are also enclosed.

In addition, as requested, we have reviewed the reports issued by F&BI on June 14, 2002 and October 23, 2003. These reports consisted of analytical data generated for the product samples MW-8, MWR-1, and MWR-4R. The purpose of this review was to provide a comparison of the material found in the samples MW-8, MWR-1, and MWR-4R. Our findings are provided below.

Based on the data generated, the material present in the samples MW-8, MWR-1, and MWR-4R is indicative of gasoline. The general composition of this material indicates that the gasoline present in these samples has undergone little to no degradation. It should also be noted that the samples contained the oxygenate methyl *t*-butyl ether (MTBE). The sample MW-8 also appeared to contain the organometallic additive methylcyclopentadienyl manganese tricarbonyl (MMT), which became available in 1958 and was phased out of use by the mid-1990's.

The results for selected constituents from the PIANO analysis of the samples MW-8, MWR-1, and MWR-4R are provided in Table 1. For comparison, included in

Table 1 are levels of *n*-butane, *n*-pentane, isooctane, benzene, toluene, ethylbenzene, and the xylenes in a "Typical" undegraded gasoline. [1]

Table 1. Selected Constituents from the PIANO Analysis (w/w%)

Sample ID	Date Analyzed	*n*-Butane	*n*-Pentane	Isooctane	Benzene	Toluene	Ethyl-benzene	Xylenes
MW-8	11/22/03	0.21	0.79	4.5	1.4	5.7	2.0	8.7
MWR-1	06/05/02	0.78	1.4	2.3	93	4.9	1.7	7.4
MWR-4R	06/05/02	1.2	1.7	2.4	0.99	4.6	1.6	6.9
Typical		3.9-4.7	5.8-10.9	0.32-4.6	0.12-3.5	2.7-22	0.36-2.9	3.2-8.3

As shown in Table 1, the highly volatile constituents *n*-butane and *n*-pentane were identified in the sample MW-8. When fuel is released to the environment these highly volatile constituents readily migrate away from the source area and become dispersed. The presence of these constituents in the sample MW-8 indicates that some of the gasoline present could be due to an ongoing release.

Comparison of the results of samples previously taken at the site, however, shows that the *n*-butane level at the site has historically been three times that present in the sample MW-8. This suggests that the *n*-butane found at this location could also be due to a historic release.

Continued monitoring at the MW-8 location is recommended using the PIANO analysis. This data can be used to measure the rate loss of specific constituents, such as *n*-butane, at the site. This information may be useful in further characterizing the period of release of the fuel present.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Kurt Johnson, Chemist

Re: Former Cross Roads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit #06742; CA #09283
Bid #SB-6672-07/29/99-REB; PO #191160
Release reported April 27, 1987
Correspondence from SCDHEC UST Program to Smith Monitoring & Maintenance, Inc. dated December 14, 2004
Breach of Contract
Oconee County

Dear Mr. Smith:

The referenced contract was awarded to Smith Monitoring & Maintenance Engineering, Inc. on August 12, 1999. In accordance with Special Condition #7 of the contract, Corrective Action System Evaluation (CASE) reports are to be submitted to the Underground Storage Tank (UST) Program on a quarterly schedule. Program records show that the last CASE report for the referenced site was received on December 13, 2004. In the referenced correspondence to Smith Monitoring & Maintenance Engineering, the Program requested that a CASE be submitted by April 1, 2005. Further, the Program requested in the same correspondence that a corrective action plan (CAP) addendum be submitted by January 14, 2005. These documents have not been received.

Currently, Smith Monitoring & Maintenance Engineering is in breach of the terms and conditions of the referenced contract and is subject to immediate contract termination. However, if the required CASE report and CAP addendum are submitted no later than thirty (30) working days from your receipt of this letter, the UST Program will forego contract termination. If the report and addendum are not submitted, contract termination may be initiated and your bonding agent notified. Smith Monitoring & Maintenance Engineering may also incur a six-month suspension from bidding on any UST-related solicitations in South Carolina and be subject to decertification in accordance with the SUPERB Site Rehabilitation and Fund Access Regulation R.61-98.

In addition, the Department has verbally requested on several occasions that documentation regarding the disposal of recovered free product be submitted. This information should be submitted with the above requested documents. Failure to do so may result in a financial audit.

Please feel free to contact me at (803) 896-6677 if you have any questions or need additional information.

Sincerely,

Lee A. Monts, Manager

UNDERGROUND STORAGE TANK PROGRAM

Re: Apparent Evidence on Additional Release; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Ms. Gardner,

This letter is provided to summarize the rationale for the determination of a new or continued release at the subject site.

During our previous meeting concerning this subject, the State focused on claims that the laboratory results for dating the product were irrelevant. I mentioned, towards the end of this meeting, that product thickness exceeded the initial thickness stated in the RFQ (see attached excerpt) from which SMME prepared its bid. As can be seen in the attached report, current product thickness now exceeds four times the original amounts stated in the RFQ.

SMME has acted with diligence on this site. We have conducted two vacuum recovery events and purchased and installed two product pumps. Together, these efforts netted about 700 gallons of fuel. Representatives of DHEC confirmed the absence of product on this site prior to SMME getting paid 75% of the contract amount, in 2001, by taking split samples.

SMME understands that the State has conducted site inspections and reviewed tank-testing data attempting to confirm that there is no apparent new source. The evidence to the contrary is clear. Whether or not the State has the ability to locate the source does not conclusively prove that it does not exist. Product continues to accumulate in the up-gradient, original source area in volumes exceeding the RFQ.

Should you have any questions, please contact the undersigned.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

UST Permit #06742; CA #09283
Bid #SB-6672-07/29/99-REB; PO #191160
Release reported April 27, 1987
Corrective Action System Evaluation received December 13, 2004
Oconee County

Dear Mr. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced report. The report documents an increase in free-phase product levels in monitoring wells MWR-4R and MW-8. Further, sampling conducted by UST personnel on October 5, 2004, confirms continued petroleum impact to a spring located six hundred and fifty (650) feet downgradient from the source area and MW-8. Please refer to the enclosed sample location map and analytical data. As you have indicated that the current corrective action technology is ineffective on the quantities of free-phase product observed at the site (CASE report dated July 5, 2004), the Program again requests submittal of a corrective action plan (CAP) addendum that proposes a suitable technology to address the problem. The CAP addendum is due within thirty days of the date of this letter.

The next CASE for the January 2005 quarterly sampling event is due on or before **April 1, 2005**. On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions regarding this correspondence, feel free to call me at (803) 896-6398 or (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by e-mail at padgetjp@dhec.sc.gov.

Instructions for completing Chain of Custody (COC)

1. Complete all Client Information at top of sheet: name, address, phone, contact (person to whom report will be sent and contact can be made if questions arise), billing information if different from client, PO#, Project Name and/or Project Number as it will appear on the report.

2. Quote Reference, Project Manager, Project No. and Profile No. will be completed by Pace.

3. A separate COC must be filled out for each day of sample collection.

4. Sampler should print their name in the space provided and sign their name followed by the date of the sampling event.

5. Complete Sample Description as it will appear on the laboratory report; include time of sampling, sample matrix, no. of containers and preservative used.

6. Analysis Requested: Complete analysis on the lines provided and place a check in the column for the samples requiring the analysis. It may be necessary to use the space provided for additional comments or include attachments for extended lists of parameters.

7. Submission of samples to laboratory: Indicate Item Number of those samples being transferred; sign relinquished by, and include your affiliation.

*** IMPORTANT NOTE:**

Standard Turnaround Time is 2 weeks. If this does not satisfy your requirements, arrangements must be made prior to samples being submitted to the laboratory. Contact your project manager.

Special Project Requirements such as Low Level Detection Limits or level of QC reported must be indicated on the chain of custody. (Use Additional Comments Section.)

Bid # SB-19780-6/11/02-EMW, PO # 416276

Dear Ms. Stabel:

Under the terms and conditions of the referenced bid package, analytical sampling has been approved for the referenced facility. The facility has been assigned an individual Cost Agreement (CA) number as listed below. Please reference the CA number and Purchase Order #416276 on the appropriate invoice submitted for payment. SCDHEC personnel will perform the sampling on or before October 5, 2004. Please use the lowest detection limit possible for the method.

File

TO: FILE

FROM: Bob Hutchinson

SUBJECT: Country Side 2
Permit ID# 06742
Subsequent Release Investigation

Date: September 27, 2004

In January 2004 the Regulatory Compliance Division received a referral from Chris Doll of the Assessment and Corrective Action Division indicating that the cleanup contractor, Smith Monitoring and Maintenance, suspected a new release had occurred at Country Side #2. The referral stated that free phase product was found in MW-8, that MW-8 had historically not shown any free product, and the results of a PIANO analysis supported the findings of a new release within five years.

An inspection of the facility was conducted on February 4, 2004. Leak detection records were observed and all dispensers checked for visible leaks. The gasoline piping at this site is European Safe Suction. The physical inspection did not reveal any evidence to support a new release. The PIANO analysis was also found to be inconclusive as to whether the product in MW-8 was from a new release (within the last 5 years) or a historic release. After further review of the file, it was also noted that MW-8 had historically contained free product. Bid number SB-6672-07/29/99-REB clearly identified that MW-8 contained 2.49 feet of free product on January 25, 1999. Smith Monitoring & Maintenance Engineering was made aware of this fact in correspondence dated December 21, 2001.

Based on the facility inspection, the leak detection records check, the PLANO report, and data in the file, the UST Program has not see any evidence to support a release that post dates the release reported on January 11, 1993.

Release reported April 27, 1987
Corrective Action System Evaluation received June 8, 2004
Oconee County

Dear Mr. Smith:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced report. The Program notes that the corrective action system has been removed from the site for repair and modifications. Further, Smith Monitoring indicates in the referenced CASE that the current corrective action technology is not effective on the quantities of free-phase product observed at the site. Therefore, the Program recommends that Smith Monitoring submit a corrective action plan addendum that proposes a suitable technology to address the problem.

The next CASE for the September 2004 quarterly sampling event is due on or before **November 1, 2004**. On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions regarding this correspondence, feel free to call me at (803) 896-6398 or (800) 826-5435 (within South Carolina only), or by fax at (803) 896-6245.

Release reported April 27, 1987
Evaluation of possible second release
Oconee County

Dear Mr. Smith:

The Regulatory Division of the UST Program has completed evaluation of a possible second release at the referenced site. After a thorough review of all technical information on-file with the Program and a subsequent site inspection, the Division has determined that there is insufficient evidence to support that a second release has occurred. A copy of the memorandum regarding this decision is enclosed for your records.

As mentioned in previous correspondence to you dated May 27, 2004, a CASE for the corrective action at the site was due on or before June 28, 2004. Based on a telephone conversation with you during the week of June 7, 2004, Smith Monitoring and Maintenance was scheduled to sample the site on during the week of June 14, 2004 and submit the requested CASE shortly thereafter. To date, the Program has not received the CASE. Considering that Smith Monitoring and Maintenance is in the process of generating the CASE, the Program will forgo issuance of a breach of contract letter provided that the report is submitted by **July 15, 2004**.

On all correspondence regarding this facility, please reference UST Permit #06742. If you have any questions regarding this correspondence, feel free to call me at (803) 896-6398 or (800) 826-5435 (within South Carolina only), or by fax at (803) 896-6245.

Release reported April 27, 1987
Correspondence from SCDHEC UST Program to Smith Monitoring & Maintenance Engineering dated March 18, 2004
Oconee County

Dear Mr. Smith:

A review of UST Program records indicates that the last quarterly corrective action system evaluation (CASE) for the Former Cross Roads Grocery site was submitted in September 2003. Although the Program is evaluating the possibility of a second release at the site as indicated in the referenced correspondence, Smith Monitoring is not relieved of the requirement to submit quarterly CASE reports as stipulated in Specification #7 of the corrective action bid. Therefore, please submit the requested CASE on or before **June 28, 2004**. If the CASE is not received by this date, Smith Monitoring will receive a breach of contract letter with copies furnished to the SCDHEC Procurement Services Division and to Smith Monitoring's bonding agency.

On all correspondence regarding this facility, please reference UST Permit #06742. If you have any questions regarding this correspondence, feel free to call me at (803) 896-6398 or (800) 826-5435 (within South Carolina only), or by fax at (803) 896-6245.

Oconee County

Dear Mr. Smith:

Please find enclosed the free product PIANO analysis results referenced above. According to this report, the product found in monitoring wells MW-1R and MW-8 is consistent with a release that may have occurred within the past 5 years. The results have been forwarded to our Regulatory section to determine if a new release has occurred. You will be notified of the Regulatory decision.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions concerning this correspondence, please contact me by phone at (803) 896-6586, (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by email at dorankm@dhec.sc.gov.

Forensic Evaluation Results received December 23, 2003
Oconee County

Dear Mr. Land:

A release was reported from underground storage tanks (USTs) at the referenced facility on January 11, 1993. Corrective action was initiated by Smith Monitoring & Maintenance Engineering in September 1999 in order to clean up the contamination at this site. In September 2003, free-phase petroleum was found in monitoring well MW-8. The UST Program is currently investigating the possibility of a second release.

Please find enclosed the free product typing results referenced above. According to this report, the product found in monitoring wells MW-1R and MW-8 is consistent with a release that may have occurred within the past 5 years. The results have been forwarded to our Regulatory section to determine if a new release has occurred. You will be notified of the Regulatory decision.

New Release

A release was reported at the referenced facility on January 11, 1993. Cleanup was initiated in September 1999 under a contract with Smith Monitoring & Maintenance Engineering. The last sampling event report, received on September 19, 2003, indicated free product was found in monitoring well MW-8(0.58') – historically no product has been found in MW-8. Since free product has previously been found at this facility in monitoring wells MWR-1 and MWR-4R a fingerprint analysis was performed on product samples from MW-8 and MWR-1 to determine the age of the product. This analysis determined that the product found in MW-8 is from a release within the past 10 years.

A PIANO analysis was then performed on product samples from monitoring wells MW-8, MWR-1, and MWR-4R. Evidence in the PIANO analysis report supports the finding of a new release (within the past 5 years). Site #06742 is currently operating five (5) billable USTs, all were found in compliance on July 10, 2003. Five (5) USTs were removed from this facility in June 1990. Please indicate whether or not the free product found in monitoring well MW-8 is indicative of a new release.

UST Permit #06742
Forensic Evaluation Results received October 31, 2003
Oconee County

Dear Mr. Smith:

Please find enclosed the free product typing results referenced above. According to this report, the product found in monitoring wells MW-1R and MW-8 is consistent with a release that occurred within the past 10 years. An additional PIANO analysis is required on product found in monitoring well MW-8 to determine the age of the release. The analytical results will be forwarded as soon as the Program has reviewed the findings.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions concerning this correspondence, please contact me by phone at (803) 896-6586, (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by email at dorankm@dhec.sc.gov.

Dear Ms. Laughter:

A Corrective Action Plan was implemented in January 2000 in response to groundwater contamination at Cross Roads Grocery. Please find enclosed copies of the referenced reports. The reports are sent to you in an effort to keep you informed of the remediation activities being conducted at the referenced facility. The reports include an overview of the current site conditions and detail the most recent groundwater sampling activities. The results of these reports provide analytical data that are used to determine the effectiveness of the remediation system. The next monitoring report will be forwarded to you as soon as this office has reviewed the findings.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions concerning this correspondence, please contact me by phone at (803) 896-6586, (800) 826-5435 (within South Carolina only), by fax at (803) 896-6245, or by email at dorankm@dhec.sc.gov.

Re: Crossroads Grocery, 8050 West Oak Highway, Westminster, SC
UST Permit # 06742
Correspondence received October 28, 2003
Oconee County

Dear Ms. Laughter:

The following is provided in response to your requested update on the environmental conditions at the above referenced facility.

We received a report on January 11, 1993 documenting petroleum in the subsurface in the vicinity of the underground storage tanks. Our records revealed that five underground storage tanks (USTs) owned by Neil Alexander were removed in 1990 and replaced by five underground storage tanks owned by R. L Jordan Oil Company. In response to the initial report of contamination, we directed Neil Alexander, as the party responsible for performing this activity under state and federal law, to assess the extent and severity of the contamination. Assessment activities were completed and the release is currently undergoing corrective action.

You also wanted us to clarify for you the financial and liability issues surrounding the petroleum contamination at this facility. State funds from the State Underground Petroleum Environmental Response Bank (SUPERB) Account will be available for Neil Alexander to access for site rehabilitation under the conditions of the SUPERB Act. Neil Alexander is entitled to up to $1,000,000 in coverage from the SUPERB Account for this release.

In 1997, the General Assembly amended Section 80 (B) of the SUPERB Act to clarify that persons who hold "indicia of ownership" primarily to protect a security interest in property impacted by a release from a UST are exempt from the requirements to conduct site rehabilitation activities other than necessary abatement actions to eliminate any imminent threat to human health or the environment. The "indicia of ownership" exemption includes those persons who acquire title to property through foreclosure or other means necessary to protect their security interest, provided that person does not participate in the management of the UST and is not otherwise engaged in petroleum production, marketing, or refining. This applies equally to subsequent lenders who acquire the USTs and property through foreclosure in the future.

The Program is not aware of any laws or regulations that prohibit the use or development of properties where a petroleum release has occurred.

If you have any questions, please contact me at (803) 896-6584 or (800) 826-5435 (within South Carolina only).

Per our conversation, the last status report I have in my Superb file for the above property cleanup is dated October, 2002. Please have the new Project Manager mail me the copies I am missing.

Also, could you please fax to me at 864-585-0859, a simple letter giving me a synopsis of the cleanup work and where Superb is in regard to completing this project.

Thanks for your help in this matter.

Corrective Action System Evaluation received May 13, 2002
Oconee County

Dear Ms. Laughter:

A Corrective Action Plan was implemented in December 1999 in response to groundwater contamination at Crossroads Grocery. Please find enclosed a copy of the quarterly monitoring report. The report is sent to you in an effort to keep you informed of the remediation activities being conducted at the referenced facility. The report includes an overview of the current site conditions and details the most recent groundwater sampling activities. The results of this report provide analytical data that is used to determine the effectiveness of the remediation system. The next monitoring report will be forwarded to you as soon as this office has reviewed the findings.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions, contact me at (803) 896-6584.

Sincerely,

Read S Miner

Report of Assessment Activities received April 23, 2002
Oconee County

Dear Mr. Smith:

On February 28, 2002, selected monitoring wells that had gone dry at the referenced facility were replaced with deeper wells. A copy of the report is enclosed. The Department will proceed with the collection of free product samples for fingerprinting as previously agreed. You will be provided with a copy of the results as soon as available.

As the dry wells have been replaced, quarterly sampling of the monitoring wells shall resume as required by the referenced bid specification. The next Corrective Action System Evaluation should be submitted on or before June 30, 2002.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions, contact me at (803) 896-6584.

UST Permit # 06742, CP # 12832
SCDHEC Contract # SB-13454-10/12/00-HW
Oconee County

Dear Mr. Shane:

A cost proposal was previously established for replacement of one dry monitoring well at the referenced facility. Since that time, the water table has continued to drop and the required work scope has been increased to include replacement of 7 dry monitoring wells (MW-4, MWR-4, MW-7, MW-9, MW-14, MW-13, and MW-5). Each well shall be completed with a ten-foot well screen bracketing the water table. The ground water in the vicinity of MW-4, MWR-4, MW-7, and MW-9 should be encountered at a depth of approximately 40 feet and at a depth of approximately 25 feet in the vicinity of MW-14, MW-13, and MW-5. A site map is enclosed. The revised monitoring well approval and cost proposal are enclosed. Well replacement activities may begin immediately upon receipt of this correspondence.

On all correspondence regarding this site, please reference the UST Permit # 06742 and Cost Proposal # 12832:P. If you have questions concerning this correspondence, or would like to submit additional information, please contact me at (803) 898-4349 or (800) 826-5435 (within SC only).

Bid # SB-7690-06/17/99-REB; PO # 179220
Oconee County

Dear Ms. Moore:

Under the term and conditions of the referenced bid package, analytical sampling has been approved for the referenced facility. Laboratory analysis has been approved for 1 water sample for BTEX, Naphthalene, and MTBE. The facility has been assigned an individual Cost Proposal (CP) number as listed above. Please reference the CP number and Purchase Order #179220 on the invoice submitted for payment.

DHEC personnel will perform the required sampling at the facility within one week and deliver the sample to Test America for the required analysis(es). 24-hour rush analysis is not requested.

If you have any questions or need further assistance, please contact me at (803) 898-4349 or (800) 826-5435 (within SC only).

Re: Crossroads Grocery
UST Permit # 06742, CP # 12832:P
SCDHEC Contract # SB-13454-10/12/00-HW
Oconee County

Dear Mr. Shane:

The referenced facility is currently in corrective action. One existing monitoring well (MW-4) is dry. The approved work scope is for replacement of this monitoring well to a depth of forty feet depth with a ten-foot screened interval. Submittal of a plan is not necessary. A site map is enclosed. Well replacement activities may begin immediately upon receipt of this correspondence.

Cost Proposal (CP) # 12832:P has been approved in the amount shown on the enclosed cost proposal spreadsheet and will be kept on file so that compensation can begin.

The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with bid number SB-13454-10/12/00-HW. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work. **The Tier II Assessment Report (two copies) and invoice should be submitted within 60 days from the date of this correspondence.**

The Department grants pre-approval for transportation of drums of virgin petroleum contaminated soil and/or drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55 gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included in the report.

SCDHEC/UST/112700

A copy of the approved assessment cost proposal is enclosed for your information. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2). Please reference **Cost Proposal Number 12832:P** on all pertinent invoices and correspondence. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this cost proposal, any associated changes to this cost proposal must be pre-approved by this Department in order for Midlands Environmental Consultants, Inc. to seek future cost compensation.

Any item(s) not clearly or completely addressed in the report (SC certified driller's number, disposal manifest for soil cuttings, disposal manifests for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account. As agreed to in the referenced contract, the owner/operator of the referenced facility will not be responsible for any costs associated with this assessment.

Monitoring well approval is enclosed for your records. Please note that all applicable South Carolina certification requirements regarding laboratory analyses, well installation, and report preparation must be met.

On all correspondence regarding this site, please reference the UST Permit # 06742 and Cost Proposal # 12832:P. If you have questions concerning this correspondence, or would like to submit additional information, please contact me at (803) 898-4349 or (800) 826-5435 (within SC only).

Monitoring Well Installation Approval Form

Date of Issue: 11/27/00

Approval No.:13459

Approval is hereby granted to: Midlands Environmental Consultants, Inc.
UST Permit # 06742
County: Oconee

This approval is for the construction of one permanent water table well in accordance with the construction plans and technical specifications outlined in the SC Well Standards and Regulations and Bid Specification SB-13454-10/12/00-HW. The wells are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality and/or water level(s) at the referenced facility. Approval is provided with the following conditions:

1. The latitude and longitude, surveyed elevations, boring and/or geologist logs and actual (as built) construction details for each well be submitted to my attention as part of the Rapid Assessment Report.
2. Each well shall be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate shall provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #.
3. Temporary wells must be properly abandon within 30 days from the date of installation.
4. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regard to contents, source, and date of activity.
5. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to Read Miner at (803) 898-4349.
6. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) associated measurements (i.e., in-situ field measurements) to my attention with the Assessment Report.
7. Monitoring wells shall be installed by a permanently licensed well driller certified by the State of South Carolina.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71.

Bid Number SB-6672/07/29/99/REB
Purchase Order #191160
Cost Proposal #:09283
Monitoring results received October 23, 2000
Oconee County

Dear Mr. Smith:

Enclosed please find a copy of the analytical results from the samples that we split on September 25, 2000. Some of the samples showed significant differences. Closer review reveals that each set was analyzed using different methods (8021B vs. 8260B).

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions, please call me at (803) 898-4349.

Sincerely,

Read S Miner

Dear Mr. Alexander:

The enclosed report from Smith Monitoring & Maintenance Engineering, Inc. documents corrective action progress through September 2000. The Department split samples with Smith Monitoring on September 25, 2000, for quality assurance purposes. A copy of the analytical data from the Department's samples is also enclosed. A copy of the next quarterly corrective action monitoring report will be sent to you in approximately three months.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions, contact me at (803) 898-4349.

Re: Tier II Assessments
Contract SB-13454-10/12/00-HW
Purchase Order # 294208
Notice to Proceed

Dear Mr. Shane:

The Underground Storage Tank Program of the South Carolina Department of Health and Environmental Control is requesting the submittal of Tier II Assessment Plans for various Tier II assessment component tasks for eight facilities.

Northwest Region

Moss Service Station	06769	Oconee	2AA	Read Miner
Former Hutchinson's 76	00039	Abbeville	2AB	Read Miner
Ed's Grocery	00712	Anderson	2AB	H. Reed Corley

Central Region

Handy Pantry 67	07434	Richland	2AA	H. Reed Corley
Burrow's Gulf	03534	Florence	2AA	H. Reed Corley
Cheapo's Truck Stop	07798	Lexington	2BA	H. Reed Corley
Former Heath Oil	08933	Sumter	2BA	H. Reed Corley

Southeast Region

P F Spell & Son	14834	Dorchester	2AA	H. Reed Corley

Please submit the Tier II Assessment Plans and Assessment Component Cost Proposals within 15 days of the date of this letter. Plan implementation shall not commence prior to receipt of written technical and financial approval from the Department. The report must be submitted within 60 days subsequent to the date on the approval letter.

Tier II Assessment Plan, Implementation, and Report submittal shall be performed in accordance with the referenced contract. Per Section 12, Special Conditions, a late fee of $100.00/day may be levied for each report submitted after the deadline established in the Notice to Proceed.

Cost proposal forms for each region are enclosed along with a Letter of Introduction that can be used to facilitate communications with property owners for access. Please submit your Health and Safety Plan, QA/QC Plan, and Standard Operating Procedures within 15 days of contract award.

SCDHEC/UST/102600

On all correspondence regarding this site, please reference the UST Permit number. The Tier II Assessment Reports shall be submitted to my attention.

Sincerely,

Dear Mr. Clark:

Under the term and conditions of the referenced bid package, analytical sampling has been approved for the referenced facility. The facility has been assigned an individual Cost Proposal (CP) number as listed above. Please reference the CP number and Purchase Order #179220 on the invoice submitted for payment.

DHEC personnel will perform the required sampling at the facility in September 2000 and deliver the samples to Test America for the required analysis(es).

If you have any questions or need further assistance, please contact me at (803) 898-4349 or (800) 826-5435 (within SC only).

Bid Number SB-6672/07/29/99/REB
Purchase Order #191160
Cost Proposal #:09283
Oconee County

Dear Mr. Smith:

As you are aware, selected monitoring wells at the referenced facility have gone dry because of the drought conditions. Deeper placement wells have been installed for your use. A copy of the well completion logs is enclosed. They are paired with the existing dry wells. This will not increase the number of ground-water quality samples to be collected during any quarterly sampling event, but will ensure the availability of a monitoring well that brackets the water table at each sampling location.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions, please call me at (803) 898-4349.

Sincerely,

Re: Hot Spot 2040
UST Permit #06742, CP # 11089:P
SCDHEC Contract # SB-4815-09/29/98/REB
Oconee County

Dear Mr. Force:

Corrective action is in progress at the referenced facility. Several monitoring wells have gone dry as a result of drought conditions and require replacement. This work scope will include replacement of six monitoring wells. The well logs and a site map depicting the locations are enclosed. Monitoring well 1 should be replaced with a new well screened from 30 to 45 feet below ground surface (BGS). Monitoring wells 2, 3, 4, and 11 should each be screened from 25 to 40 feet BGS. Monitoring well 1A should be replaced with a type III well with an anticipated depth of 75 feet BGS. Assessment activities at the site should begin immediately upon receipt of this letter.

Cost Proposal (CP) #11089:P has been approved in the amount shown on the enclosed cost proposal spreadsheet and will be kept on file so that compensation can begin

The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with bid number SB-4815-09/29/98/REB. Further, SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work. The Rapid Assessment Report (two copies) must be submitted within 60 days of the date of this letter.

The Bureau grants pre-approval for transportation of drums of virgin petroleum contaminated soil and/or drums of groundwater from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55 gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included in the report.

SCDHEC/UST/050800

A copy of the approved assessment cost proposal is enclosed for your information. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2). Please reference **Cost Proposal Number 11089:P** on all pertinent invoices and correspondence. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this cost proposal, any associated changes to this cost proposal must be pre-approved by this Department in order for Force & Associates, Inc. to seek future cost compensation.

Any item(s) not clearly or completely addressed in the report (SC certified driller's number, disposal manifest for soil cuttings, disposal manifests for generated ground water, etc.) WILL NOT be compensated by the SUPERB Account. As agreed to in the referenced contract, the owner/operator of the referenced facility will not be responsible for any costs associated with this assessment.

Monitoring well approval for 5 type II permanent and one type III monitoring wells have been approved. A copy is enclosed for your records. Please note that all applicable South Carolina certification requirements regarding laboratory analyses, well installation, and report preparation must be met.

On all correspondence regarding this site, please reference the UST Permit # 06742 and Cost Proposal # 11089:P. If you have questions concerning this correspondence, or would like to submit additional information, please contact me at (803) 898-4349 or (800) 826-5435 (within SC only).

Sincerely,

Monitoring Well Installation Approval Form

Date of Issue: 05/08/00

Approval No.:12803

Approval is hereby granted to: Force & Associates, Inc.
UST Permit # 06742
County: Oconee

This approval is for the construction of 5 type II permanent and one type III monitoring wells in accordance with the construction plans and technical specifications outlined in the SC Well Standards and Regulations and Bid Specification SB-4815-09/29/98/REB. The wells are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality and/or water level(s) at the referenced facility. Approval is provided with the following conditions:

1. The latitude and longitude, surveyed elevations, boring and/or geologist logs and actual (as built) construction details for each well be submitted to my attention as part of the Rapid Assessment Report.
2. Each well shall be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate shall provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #.
3. Temporary wells must be properly abandon within 30 days from the date of installation.
4. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regard to contents, source, and date of activity.
5. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to H. Read Miner at (803) 898-4349.
6. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) associated measurements (i.e., in-situ field measurements) to my attention with the Assessment Report.
7. Monitoring wells shall be installed by a permanently licensed well driller certified by the State of South Carolina.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71.

Injection Well Operating Approval
for

Class II, III, and V.A. Injection Well(s)

Permit #490 Date of Issue: January 10, 2000

In accordance with the provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, and pursuant to receiving a Permit to Construct twelve (12) Class V.A.-I (Aquifer Remediation) injection wells, authorization is granted to Neil Alexander to operate twelve (12) Class V.A.-I injection wells located at the Crossroads Grocery, Oconee County, SC, and are subject to the attached provisos noted for the operator.

The Class V.A.-I injection wells are a true diameter of one inch, and a total depth of approximately 40 - 50 feet.

Pursuant to Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, this authorization may be rescinded if these injection wells should, at any time, contaminate, pollute, or otherwise adversely affect other water in the vicinity or for any other conditions contained in R61-87, Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended.

Expires: January 10, 2002

MEMORANDUM

DATE: 22 December 1999

TO: Read S. Miner, P.G.
Division of Underground Storage Tank Management

FROM: Kevin J. Clark, P.E. KC
Air Modeling Section
Bureau of Air Quality

SUBJECT: Crossroads Grocery, GWPD 06742
850 West Oak Highway
Tokeena, South Carolina

The Bureau of Air Quality has reviewed the air emission information for the eight-hour vacuum enhanced product recovery event to be located at Crossroads Grocery, 850 West Oak Highway, Tokeena, South Carolina. Air dispersion modeling results indicate that the air toxics emitted (Benzene, Toluene, Ethylbenzene, Xylenes, Naphthalene, and MTBE) will result in off-site concentrations of these toxics that will meet the air toxic standards (Standard No. 8). Since the total volatile organic compound (VOC) emissions are less than 1000 lbs./month, an air permit will not be required for the vacuum enhanced product recovery event. If the 1000 lb. VOC limit is reached during the vacuum enhanced product recovery event, the system will be shut down, and an air permit will be obtained from the Bureau of Air Quality before operation may continue. This is in accordance with Section II, Part F, Paragraph G of the SC Dept. of Health and Environmental Control Air Pollution Control Regulation No. 62.1.

Re: Crossroads Grocery
UST Permit # 06742
Bid Number SB-6672/07/29/99/REB
Purchase Order #191160
Cost Proposal #:09283
Corrective Action Plan received September 29, 1999
Public Notice completed November 15, 1999
Oconee County

Dear Mr. Smith:

The Division of Underground Storage Tank Management has reviewed the referenced documents. The proposed corrective action was placed on public notice. No comments were received and corrective action should commence immediately upon receipt of this letter. A copy of the Underground Injection Control Permit to Construct is enclosed. Please contact the property owners prior to your anticipated work start date to coordinate site access.

Installation of the Corrective Action System should begin immediately. Please follow the instructions on the Underground Injection Control Permit to Construct. The baseline monitoring report shall be submitted on or before December 30, 1999.

The referenced cost proposal has been approved in the amount of *$139,506.00* and will be kept on file so that compensation can begin in accordance with the pay for performance schedule outlined in the bid specification. A purchase order for this bid number has been prepared by the Bureau of Business Management. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2) and the referenced bid special conditions. Please reference ***Cost Proposal Number 09283*** on all pay-for-performance invoices. If for any reason there is a change in this cost proposal, the bid specification, and/or special conditions, all changes must be preapproved by SCDHEC in writing in order for Consultech Environmental, Inc. to seek future compensation.

SCDHEC/UST/111599

The Division grants preapproval for transportation of drums of virgin petroleum contaminated soil and/or drums of groundwater generated during drilling or sampling from the referenced site to a permitted treatment facility. The contaminated soil and/or groundwater must be properly stored in labeled 55 gallon drums or equivalent containers. The contaminated soil and/or groundwater must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest from the receiving facility that clearly designates the quantity received must be included in the report.

On all correspondence regarding this site, please reference UST Permit #06742. If you have any questions, please call me at (803) 898-4349.

Sincerely,

Read S Miner

Re: Crossroads Grocery
UST Permit #06742
Oconee County

Dear Ms. Laughter:

As you may be aware, gasoline constituents have been identified in the soil and ground water on your property which contains a gasoline service station (Tax map #301-4-40). The presence of the petroleum does not pose an immediate risk to your health, however, cleanup is warranted to prevent any future risk. Smith Monitoring & Maintenance, Inc. (SMM) has been retained to respond to the petroleum release. SMM has submitted a Corrective Action Plan to clean up the impacted soil and ground water using the injection of oxidizers and nutrients to enhance the breakdown of petroleum into harmless by-products (carbon-dioxide and water), followed by natural attenuation.

Section 280.67 of the South Carolina Underground Storage Tank Regulations requires the Division of Underground Storage Tank Management to provide notice to those members of the public that may be affected by the planned corrective action. The installation of injection and extraction wells and trenches on your property is necessary as part of the corrective action measures, however, SMM has been directed to coordinate with you and to minimize any inconvenience to you. Your continued cooperation is appreciated.

A copy of the corrective action plan is enclosed. If you have any questions or comments regarding the proposed corrective actions, please call me at (803) 898-4349 or 1-800-826-5435. All comments should be submitted within twenty days of the date of this correspondence.

Sincerely,

Read S. Miner

Re: Crossroads Grocery
UST Permit #06742
Oconee County

Dear Mr. Long:

As you may be aware, gasoline constituents have been identified in the soil and ground water at Crossroads Grocery which is located near your property (Tax map #301-4-29). The presence of the petroleum does not pose an immediate risk to your health, however, cleanup is warranted to prevent any future risk. Smith Monitoring & Maintenance, Inc. (SMM) has been retained to respond to the petroleum release. SMM has submitted a Corrective Action Plan to clean up the impacted soil and ground water using the injection of oxidizers and nutrients to enhance the breakdown of petroleum into harmless by-products (carbon-dioxide and water), followed by natural attenuation.

This notice is provided to inform you of actions taking place near your property. The petroleum has not reached your property and you should not be affected by the proposed corrective actions.

If you would like to review the corrective action plan, please call the SCDHEC Freedom of Information Office at 803-898-3882. If you have any questions or comments regarding the proposed corrective actions, please call me at (803) 898-4349 or 1-800-826-5435 (within South Carolina only). All comments should be submitted within twenty days of the date of this correspondence.

Sincerely,

Re: Crossroads Grocery
UST Permit #06742
Oconee County

Dear Mr. Alexander:

As you may be aware, gasoline constituents have been identified in the soil and ground water at Crossroads Grocery (Tax map #301-4-40). The presence of the petroleum does not pose an immediate risk to your health, however, cleanup is warranted to prevent any future risk. Smith Monitoring & Maintenance, Inc. (SMM) has been retained to respond to the petroleum release. SMM has submitted a Corrective Action Plan to clean up the impacted soil and ground water using the injection of oxidizers and nutrients to enhance the breakdown of petroleum into harmless by-products (carbon-dioxide and water), followed by natural attenuation.

Section 280.67 of the South Carolina Underground Storage Tank Regulations requires the Division of Underground Storage Tank Management to provide notice to those members of the public that may be affected by the planned corrective action. The installation of injection and extraction wells and trenches is necessary as part of the corrective action measures, however, SMM has been directed to coordinate with you and to minimize any inconvenience to you. Your continued cooperation is appreciated.

A copy of the corrective action plan is enclosed. If you have any questions or comments regarding the proposed corrective actions, please call me at (803) 898-4349 or 1-800-826-5435. All comments should be submitted within twenty days of the date of this correspondence.

Sincerely,

Read S Miner

Re: Crossroads Grocery
UST Permit #06742
Oconee County

Dear Sir:

As you may be aware, gasoline constituents have been identified in the soil and ground water at Crossroads Grocery which is located near your property (Tax map #301-4-2). The presence of the petroleum does not pose an immediate risk to your health, however, cleanup is warranted to prevent any future risk. Smith Monitoring & Maintenance, Inc. (SMM) has been retained to respond to the petroleum release. SMM has submitted a Corrective Action Plan to clean up the impacted soil and ground water using the injection of oxidizers and nutrients to enhance the breakdown of petroleum into harmless by-products (carbon-dioxide and water), followed by natural attenuation.

This notice is provided to inform you of actions taking place near your property. The petroleum has not reached your property and you should not be affected by the proposed corrective actions.

If you would like to review the corrective action plan, please call the SCDHEC Freedom of Information Office at 803-898-3882. If you have any questions or comments regarding the proposed corrective actions, please call me at (803) 898-4349 or 1-800-826-5435 (within South Carolina only). All comments should be submitted within twenty days of the date of this correspondence.

Sincerely,

Read S. Miner

Re: Underground Injection Control Permit #490
Cross Roads Grocery
Oconee County

Dear Mr. Alexander:

Enclosed is a Permit to Construct for fourteen (14) Class VA-I injection wells at the Cross Roads Grocery, Oconee County as requested in the permit application received October 13, 1999. **To comply with the SC Well Standards and Regulations the wells must be grouted from a distance of 2.5 times the largest borehole diameter above the screen to the surface with a neat cement or neat cement/bentonite mixture.** An inspection of the UIC System must be conducted prior to issuance of Approval to Operate. The Department will schedule an inspection after receipt of Notice of Completion of Construction. The Notice of Completion of Construction should include a site map, boring logs and as built well construction details on SCDHEC well record forms or equivalent. After completion of the inspection, Approval to Operate #490 will be issued.

If you have any question, please call me at (803) 898-3549.

Sincerely,

Injection Well Construction Permit
for
Class II, III, and V.A. Injection Well(s)

Permit #490

Date Issued: October 25, 1999
Date Expired: October 25, 2000

For (Operator): Neil Alexander

In accordance with provisions of Title 48, Chapter 1, South Carolina Code of Laws, 1976, as amended, permission is granted for construction of fourteen (14) Class V.A.-I injection wells with a true diameter of 1 inches and a depth of approximately 45 feet located at the Cross Roads Grocery , Oconee County, SC with the following provisions:

1) The operator shall submit completed SCDHEC well record forms to the Department's Water Monitoring, Assessment & Protection Division after completion of the injection wells.

2) Upon completion of construction, injection activities shall not commence prior to receiving approval from the Department to operate the injection wells.

3) When the injection wells are no longer in use, or upon request by the Department, within sixty (60) days all injection wells must be permanently abandoned in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

4) Injection wells must be installed and grouted in accordance with the South Carolina Well Standards and Regulations (R.61-71.10).

STATEMENT OF BASIS - UIC DRAFT PERMIT #490

In accordance with the South Carolina Underground Injection Control Regulations, Section R61-87.12,J., this "Statement of Basis" has been prepared for the Cross Roads Grocery Underground Injection Control permit application received October 13, 1999.

Ownership of the proposed injection wells is Mr. Neil Alexander, 8050 West Oak Highway, Westminister, SC 29693. The permit (UIC #490) is for the construction of fourteen (14) injection wells for a corrective action system at the Cross Roads Grocery. The intent of the injection wells are to facilitate enhance remediation by injection of clean air and nutrients (PHOSter II) as described in the Corrective Action Plan into the subsurface. The draft permit for the underground injection proposal has been prepared based on staff review and the application of the Pollution Control Act of South Carolina and the Underground Injection Control Regulations of South Carolina.

Conditions of the permit issuance include the submittal of well records for all injection wells installed and the inspection of well construction by the Department prior to injection.

To: John Merritt, Manager
Finance Section

From: Christopher S. Doll, P.G., Manager
State Lead & Field Services Section

Subject: Bid Award, SB-6672
Crossroads Grocery (UST Permit #06742)

This Division has reviewed the submittals received July 29, 1999, for the referenced Bid. The low bid was submitted by Smith Monitoring, Inc. Therefore, this Division recommends immediate award of the contract to Smith Monitoring, Inc.

The purchase order should be generated for one half of the accepted bid award amount, $69,753.00. Please note, the full amount of the bid award ($139,506.00) should be noted in the body of the generated purchase order. Please provide Read S. Miner a copy of the purchase order.

COMMODITY: To perform corrective action of a petroleum release from regulated underground storage tank site at site number 06742, Crossroads Grocery, 850 West Oak Highway, Oconee County, South Carolina.

METHOD OF BID AWARD: Award will be made by total to the lowest responsive and responsible bidder.

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-6672-07/29/99-REB

BIDDING SCHEDULE

The total cost in dollars to treat the area of concern (see figure #2) such that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this bid invitation for the Crossroads Grocery, (UST Permit # 06742), 850 West Oak Highway, Oconee County, South Carolina is: $ 139,506

OTHER CRITERIA

Please respond to the following questions which have been designed to verify your corrective action qualifications:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required):
   VACUUM ENHANCED PRODUCT RECOVERY + PHOSTER NUTRIENT INJECTION

2. The estimated time in months to complete the corrective action from the date of bid award, correctiv action goals are met, and all corrective action items are removed from the site or properly abandoned i approximately 16 months. This time assumes all submitted plans and reports will be reviewe by DHEC within 30 days of receipt.

3. When can you begin work (earliest date that a CAP, ER and all permit applications would be submitted aft notification of Statement of Award from the Bureau of Business Management)? 60 DAYS

BID ACCEPTANCE and DELIVERY STATEMENT

In compliance with the bid solicitation and subject to all conditions thereof, the contractor offers and agrees, if tl bid is accepted within 120 days from date of bid opening, to furnish any or all items/services quoted the prices set forth.

This clause applies to any resultant contract of $50,000.00 or more. The State of South Carolina has amended Title 44, Code of Laws of South Carolina, 1976, relating to health, by adding Chapter 107, so as to enact the Drug-Free Workplace Act.

I certify that this bid is made without prior understanding, agreement or connection with any corporation, firm or person submitting a bid for the same materials, supplies or equipment and is in all respects fair and without collusion or fraud. I agree to abide by all conditions of this bid and certify that I am authorized to sign this bid for the bidder.

Date Signed

COMMODITY: To perform corrective action of a petroleum release from regulated underground storage tank site at site number 06742, Crossroads Grocery, 850 West Oak Highway, Oconee County, South Carolina.

METHOD OF BID AWARD: Award will be made by total to the lowest responsive and responsible bidder.

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-6672-07/29/99-REB

BIDDING SCHEDULE

The total cost in dollars to treat the area of concern (see figure #2) such that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this bid invitation for the Crossroads Grocery, (UST Permit # 06742), 850 West Oak Highway, Oconee County, South Carolina is: $ 167,000.

OTHER CRITERIA

Please respond to the following questions which have been designed to verify your corrective action qualifications:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required):

AIR SPARGING ENHANCED BY VAPOR EXTRACTION.

FREE PRODUCT REMOVAL - HAND BAIL WITH ABSORBANT PADS.

2. The estimated time in months to complete the corrective action from the date of bid award, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately 30 months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

3. When can you begin work (earliest date that a CAP, ER and all permit applications would be submitted after notification of Statement of Award from the Bureau of Business Management)? 60 DAYS

BID ACCEPTANCE and DELIVERY STATEMENT

In compliance with the bid solicitation and subject to all conditions thereof, the contractor offers and agrees, if this bid is accepted within 30 days from date of bid opening, to furnish any or all items/services quoted at the prices set forth.

Re: Crossroads Grocery
Oconee County

Based on the recommendation for an advisory to be issued at the referenced facility, it is recommended that a meeting be scheduled to discuss the type of advisory that would be applicable and to work out the general details. It is recommended that the group include representatives from the District EQC office, you and your management, Tracey Shelley (Health Hazard Evaluation), Gina Kirkland (BoW) and the writer. A final process for the development and maintenance of an advisory has not yet been finalized but currently being drafted.

Pleas contact me as to your concurrence on this issue that such a meeting can be scheduled. If you have any question, pleas contact me at (803)898-4251.

RE: Health Consultation- Crossroads Grocery

The Division of Health Hazard Evaluation has completed its evaluation of the surface water monitoring data for an unnamed tributary of Mud Creek. The creek is in a heavily wooded area about 1,200 feet from the Crossroads Grocery site in Oconee County, South Carolina. There is one home fairly close (about a ½ mile) to the creek. The area between the home and the creek is heavily wooded. The creek is a groundwater outcrop.

Two surface water samples were collected, one about 10 feet from the headwaters and the other one about 50 feet further downstream. Benzene (75 μg/l), toluene (0.73 μg/L), and xylene (1.9 μg/L) were detected in the headwater sample. Only toluene (1.1 μg/L) was detected in the downstream sample. Benzene was the only volatile organic compound (VOC) detected above its United States Environmental Protection Agency (U.S. EPA) maximum contaminant level (MCL) of 5.0 μg/L. MCLs are based on a lifetime of exposure and HHE uses them as a screening level to determine if the data need further evaluation.

If a child or an adult were to ingest a small amount of this water while playing or wading in the water, the estimated exposure dose would be lower than the level at which we would expect adverse health effects to occur. However, if a person were to use this water as a drinking water source, the estimated dose for exposure to benzene could exceed the U.S.EPA oral reference dose. This is the dose below which, adverse noncancer health effects would not be expected to occur. The estimated dose for a child exposed through swimming or wading in the creek would also exceed the reference dose for benzene. Dermal exposure may not always be the most important route of exposure, but it may contribute significantly to total exposure (Mattie et al., 1994). Any exposure that could occur, should not increase the risk of developing cancer.

printed on recycled paper

Based on the most current data available for review, an advisory for the unnamed tributary may be warranted. Prolonged exposure either through swimming, wading, or drinking could result in adverse health effects. There may also be surface water quality concerns that need to be addressed. It is recommended that an ongoing, periodic monitoring program of the surface water body be established. Additional information will be forthcoming regarding the evaluation of the surface water quality issue. HHE will review any additional environmental monitoring data collected during any future investigations.

(To retain Mirta Carpenter)
850 West Oak Highway
Westminster, Oconee County, SC 29693
GWPD Site ID #06742; Cost Proposal #03787

Dear Mr. Miner:

In accordance with a discussion with Ms. Mirta Carpenter on February 20, 1998, Ms. Carpenter will be working with Environmental Monitoring Corporation to provide Crossroads Grocery and myself as owner/operator with all my environmental consulting needs. Environmental Monitoring Corporation is based in Hartwell, Georgia, and is South Carolina certified (Certification Level - Class I). ESCM & Associates, Inc., will be closing its doors and Ms. Carpenter and I have decided to use Environmental Monitoring Corporation in lieu of ESCM & Associates, Inc. This information is provided to you so that South Carolina Department of Health and Environmental Control can make the following changes to my file:

Former consulting firm: ESCM & Associates, Inc., Watkinsville, GA (President: Mr. Edward Shaw)

New consulting firm: Environmental Monitoring Corporation (President: Mr. Britt Myers)
P.O. Box 901
Hartwell, GA 30643
706-376-5000

Please copy Ms. Mirta Carpenter

(770) 577-9401 FAX

certification
#146

If you have any questions regarding these changes, you may contact me at (864) 972-3489 at Crossroads Grocery, (864) 882-0373 (my home), or you may contact Ms. Mirta Carpenter at (770) 577-8909. Thank you for your assistance regarding this matter. Please make the appropriate changes to the most recent cost proposal (CP#03787) so that EMC (not ESCM) will be reimbursed for the work to be completed under this cost proposal. EMC's federal tax ID number is FEIN#58-1856513.

Sincerely,
R Neil Alexander

Subject:	Crossroads Grocery Review		

COMMENTS:

Dear Read,

Please review the attached proposed monitor well locations in relation to the results of the geoprobe work conducted on 1/7-9/98 and 2/18-20/98. We may alter the actual locations of MW-8 and MW-9 based on the soil findings during our field work scheduled for March 30 through April 3, 1998. Monitor wells MW-10, MW-11, MW-12, MW-13, and MW-14 will be drilled at the shown locations. If you have any suggestions or comments, please contact me as soon as possible by telephone or e-mail. The e-mail seems to working out great. I found the three references you suggested at the UGA science library. Again thank you. :-)

Dear Mr. Alexander:

The Bureau of Underground Storage Tank Management has reviewed and approved the referenced submittals.

Site activities can be initiated immediately upon receipt of this letter. Compliance with all well driller, laboratory, and professional certifications must be maintained. Please note that after September 20, 1997, all rehabilitation activities associated with a UST release must be performed by a SCDHEC certified site rehabilitation contractor as required by R.61-98.

The Bureau grants preapproval for transportation of up to ten drums ground water, one drum free product, and twenty-six drums virgin petroleum contaminated soil from the referenced site to a permitted treatment facility. The contaminated soil or ground water must be properly stored in labeled containers or covered with plastic as appropriate. The contaminated soil and/or ground water must be accepted by the approved treatment facility. There can be no spillage or leakage in transport. A copy of the disposal manifest and/or acceptance letter from the receiving facility that clearly designates the quantity received must be included as an appendix to the final report. If the levels of petroleum contamination based on laboratory analysis are below risk-based screening levels, please contact the project manager for approval to dispose of soil and/or ground water on site. The SUPERB Account will not compensate for transportation or treatment of clean soil and/or ground water.

Cost proposal #03787 has been approved for this scope of work in the amount of $64,035.45. Please see the enclosed Assessment Component Cost Proposal for a detailed breakdown of the revised work scope, which was discussed with Mirta Carpenter of ESCM on September 8, 1997.

- Component 6 includes 100 feet of soil borings to be completed around the underground storage tanks, lines, and dispensers to define the extent of impacted soil. The soil samples in component 11 are included for this area. Please see Appendix C (data acquisition section) of the Risk-Based Corrective Action document for more information pertaining to the soil investigation.

- The remaining 600 feet in component 6 is for field screening points. Please note that the SUPERB Account will not compensate any additional amount for laboratory analyses completed from field screening points. All quantification costs are included in the established rate of $17.00 per foot.

Please note that Sections 44-2-110(4) and 44-2-130 of the SUPERB Statute state that no costs will be allowed unless prior approval from the Department is obtained. If for any reason components need to be added to the work scope, these components and the associated rates must be approved by the Department prior to initiation.

The report and associated invoice (form enclosed) should be submitted within 90 days from the date of this correspondence. If the invoice is not submitted within 120 days from the date of this letter, monies allocated to pay this invoice will be uncommitted. This means that the invoice will not be processed for payment until all other committed funds are paid or monies become available.

On all future correspondence, please reference the **Site ID #06742 and CP #03787.** Questions concerning the above should be addressed to the attention of Read Miner at (803) 734-5327.

Sincerely,
Owner/Operator Assistance Section

Monitoring Well Installation Approval Form

Date of Issue: September 9, 1997 Approval No.:8741

Approval is hereby granted to: ESCM & Associates, Inc.
on behalf of: Neil Alexander
Site ID #06742
Oconee County

This approval is for the construction of up to thirty temporary wells and sixteen type II monitoring wells at the above referenced site in accordance with the S. C. Well Standards and Regulations R.61-71. The well(s) are to be constructed within the surficial aquifer for the intended purpose of monitoring ground-water quality at the referenced facilities. Approval is provided with the following conditions:

1. The boring logs and actual (as built) construction details for each well be submitted with the assessment report.
2. Each well shall be labeled with an identification plate constructed of a durable material affixed to the casing or surface pad where it is readily visible. The plate shall provide monitoring well I.D.#, date of construction, static water level, and driller name and state certification #.
3. Well construction and sampling derived waste including, but not necessarily limited to, drill cuttings, drilling fluids, development and purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regards to contents, source, and date of activity.
4. A minimum of forty-eight (48) hours prior to initiation of drilling activities, please provide notice to Read Miner at 734-5327.
5. Please provide ground-water quality analytical data (chemical analysis and/or water level(s)) associated measurements (i.e., in-situ field measurements) with the assessment report.
6. Monitoring wells shall be installed by a well driller certified by the State of South Carolina.

This approval is pursuant to the provisions of Section 4-5540 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71.

SUBJECT: Crossroads Grocery
Site ID #06742
Oconee County

Petroleum contamination has been detected in a stream located approximately 1200 feet from the referenced facility. The stream is a tributary of Mud Creek which discharges into Beaverdam Creek which ultimately discharges into Hartwell Reservoir (A topographic may is attached). Stream water quality analytical results from the creek are listed on figure 3.

According to the site map, the stream is located ½ mile south of the trailer home near monitoring well 5. According to Joanne Cooper from the Bureau of UST Management, the land is all woods from the trailer home to the stream.

Please advise whether this stream should be posted.

If you have any questions, my phone number is 734-5327.

RE: **Risk-Based Corrective Action - Tier 1 and 2**
(Standard Limited Assessment: Report of Findings)
Crossroads Grocery
State Highways 24 and 59
Route 2, Box 149
Westminster, Oconee County, SC 29693
GWPD Site ID #06742: CP #02047

Dear Ms. Cooper:

ESCM & Associates, Inc., (ESCM) has been commissioned by Mr. Neil Alexander, the owner and operator of referenced facility, to conduct assessment and remediation activities at Crossroads Grocery. In accordance with SCDHEC's letter dated July 31, 1996, two copies of the Risk-Based Corrective Action Tier 1 and 2 (Standard Limited Assessment: Report of Findings) are being submitted for your review. This report was prepared in the format outlined in SCDHEC's "Risk-Based Corrective Action for Petroleum Releases" dated June 1995. Also enclosed please find the Assessment Component Invoice (Invoice # EAS01049-01; CP#02047) and the Cost Proposal for the interim remedial action (i.e., free-product recovery). Please note two cost proposals have been submitted; one for ECOVAC services (four events) plus monitoring for a one year period and the other proposal is for the SWAP system plus monitoring for a one year period. Please review both cost proposals including the literature enclosed for each fluid recovery technology and let me know what you think. If you have any questions concerning the enclosures, please contact Ed Shaw at (706) 769-4434 or myself at (706) 886-7634. Your on-going assistance is greatly appreciated.

Sincerely,

Mirta A. Carpenter
Environmental Manager/ Hydrogeologist

Subject: Soil Boring required - additional cost proposal

#06742

COMMENTS:

Per our telephone discussion earlier today, one soil boring in the worst case area is required for the soil leachability model analyses. Therefore, ESCM requests that the cost associated with this additional task be added to the approved cost proposal CP#02047. The additional cost is 20 feet X $17.00/foot = $340.00 + 15% ($51.00) = **$391.00**. If you have any questions or need more information, please call me at the number above anytime. Thank you for your continued assistance. The tentative drill dates for Crossroads Grocery are September 9 and 10, 1996. I will call you later to verify these dates.

+ 20' abandonment @ $4.00/ft = 80
$420.00 total x 15% (63.00) = $483.00

Rapid Assessment Report received February 18, 1997
Oconee County

Dear Mr. Alexander:

The Bureau of Underground Storage Tank Management has reviewed the referenced submittal. The following issues were discussed with Mirta Carpenter of CEC, Inc. on May 19, 1997.

- The soil and water samples were not analyzed by a South Carolina certified laboratory and new samples are necessary.

- The extent of impacted soil around the underground storage tank lines and dispensers needs to be defined.

- The migration pathways that petroleum constituents are taking from the source to the creek need to be delineated.

- The extent of the free product plume needs to be delineated.

- The extent of the ground-water plume needs to be delineated using field screening methods.

- Additional permanent monitoring wells for future monitoring of the horizontal and vertical migration of the plume are needed. The locations of the wells should be determined upon completion of plume delineation.

Please have your contractor submit a Rapid Assessment work plan and cost proposal within thirty days of the date of this correspondence.

On all future correspondence, please reference the **Site ID #06742.** Questions concerning the above should be addressed to the attention of Read Miner at (803) 734-5327.

Sincerely,
Owner/Operator Assistance Section

Re: Crossroads Grocery
Site ID: #06742
Oconee County

Dear Mr. Hughes:

As requested, the status of the release at the referenced site and an explanation of the applicable regulations is provided in response to your telephone call of July 25, 1996.

Statutory Information

According to the State Underground Petroleum Environmental Response Bank (SUPERB) Act, the "owner" means: (a) in the case of an underground storage tank (UST) system in use on November 8, 1984, or brought into use after that date, any person who owns an UST system used for storage, use, or dispensing of regulated substances: (b) in the case of any UST system in use before November 8, 1984, but no longer in use on that date, any person who owned such a UST immediately before the discontinuation of its use; or (c) any person who has assumed legal ownership of the UST through the provisions of a contract of sale or other legally binding transfer of ownership.

Section 44-2-80 (B) of the SUPERB Act states "The requirement to conduct site rehabilitation actions other than necessary abatement actions to eliminate any imminent threat to human health, safety, or the environment a release may pose, does not apply to a person who, without participating in the management of an underground storage tank and is otherwise not engaged in petroleum production, refining, and marketing, hold indicia of ownership primarily to protect that person's security interest in the tank. The indicia of ownership do not include persons who acquire title to the property through foreclosure or other means necessary to enforce the security interests and who, without participating in the management, are otherwise not engaged in petroleum production, refining, and marketing."

Section 44-2-80 (C) of the SUPERB Act states "A person who acquires title to any property on which an underground storage tank has been removed shall not be responsible for site rehabilitation actions other than necessary abatement actions to eliminate any imminent threat to human health, safety or the environment. This exemption applies to the extent the release is eligible for compensation from the SUPERB Account if both of the following conditions are met:

recycled paper

(1) Such person does not have or has not had any familial, financial, or related interests with the person who owned or operated the USTs that were previously in use at that property. The person must not be an affiliate of the owner or operator.

(2) The person shall allow for the reasonable access by the UST owner or operator or the Department to perform site rehabilitation activities."

You should be aware that there are currently no laws or regulations that prohibit the use or development of properties where a petroleum release has occurred.

Qualification for SUPERB monies

The referenced release was qualified to participate in the State Underground Petroleum Environmental Response Bank (SUPERB) Account in January 1993. This means that this release is qualified to receive up to $1,000,000 for costs associated with the investigation and cleanup of reported releases of petroleum from the underground storage tanks.

Availability of SUPERB monies

Because the amount of SUPERB monies available is limited, cleanup funding is not possible from the SUPERB Account at all the releases reported in South Carolina concurrently. Therefore, SCDHEC uses a classification system to prioritize the reported releases. Releases are placed into one of five classes based on the threat the release poses to human health and the environment (classification one represents an immediate risk and classification five represents the least serious risk). To ensure the protection of human health, the limited funds are being allocated first to those releases that pose an immediate risk (e.g. contaminated drinking water wells) to human health. Currently this site has documented petroleum constituents in both ground water and soil. The latest report indicates that the release has a priority classification of **1D**. Therefore, approved site activities are being funded by SUPERB monies.

Please reference site identification number 06742 on all correspondence. If you have any further questions, feel free to call Joanne Cooper or myself at (803) 734-5331.

Sincerely,

Technical Section

Re: Crossroads Grocery
Site ID #06742
Availability of SUPERB Funding
Oconee County

Dear Mr. Alexander:

Currently, the release reported January 1993, for the referenced site has a priority classification of 1D. Therefore, this release is eligible to receive SUPERB funds to proceed with the next scope of work. As the Responsible Party (RP) for this site, you may elect to proceed with the next scope of work immediately and be compensated, have your contractor receive direct billing from the fund at the proposed allowable costs, or have this Bureau retain a contractor for you and proceed.

The Bureau of Underground Storage Tank Management is in the process of updating costs for site rehabilitation activities. These costs are to be public noticed in the April 26, 1996, State Register. Until these costs are finalized, we are instituting interim allowable costs to allow RPs immediate access to the fund. If the allowable costs should be decreased as a result of the public notice, we will honor the costs quoted in this correspondence. However, should the costs be increased as a result of this notice, we will only honor the costs quoted in this correspondence.

The next scope of work deemed necessary for the referenced site is the completion of the Rapid Assessment. If you desire to proceed based on the attached unit costs, complete and submit the enclosed Assessment Component Cost Proposal form and Rapid Assessment Plan forms within thirty days of the date of this letter. Every component may not be necessary to complete the above scope of work. The proposed cost for each component is included on the Cost Agreement form.

Please indicate below if you desire to proceed based on these unit costs or if you decline to proceed at this time. Also, indicate if you need assistance in hiring a contractor. Your priority classification will not be affected by a decision to not proceed at this time; however, should all available SUPERB funds be committed during this interim process, funding for work on your site, after the proposed rates become finalized, may be delayed until such time as funds become available. **This letter should be completed and returned to this Bureau within 5 days of receipt.**

Cost Proposal received September 26, 1995
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced cost proposal for free product recovery, receptor survey, sampling of existing monitoring wells and the stream, preparation of associated reports, and small volume disposal. The cost agreement has been approved in the amount of **$9133.75** and will be kept on file so that compensation can begin. Future invoices and/or other criteria included therein must comply with current SUPERB criteria per Section 44-2-20(2). Please reference **cost agreement number 01277** on all pertinent invoices and correspondence. Please note that Sections 44-2-110(4) and 44-2-130(B) of the SUPERB Statute state that after September 30, 1994, no costs will be allowed (considered for payment) unless prior approval from the Department is obtained. If for any reason there is a change in this cost agreement, any associated changes to this cost proposal must be preapproved by this Department in order for Mr. Alexander or ESCM & Associates, Inc. to seek future cost compensation. Per Section 44-2-40 of the SUPERB Statute, **the report should be submitted within 90 days and an invoice for site rehabilitation activities must be submitted within 120 days from the date of this letter** for approval or the cost agreement will be cancelled. As requested, ESCM & Associates, Inc. has been designated as the Payee.

The following rates and/or site rehabilitation activities proposed have been adjusted to insure compliance with current SUPERB program criteria per Section 44-2-20 (2):

- $150.00 less for Handling Fee on analysis (p.11). $125.00 is the maximum rate.
- $150.00 less for Engineer for Modeling (p.13). The rate has been adjusted to the maximum rate of $72.00 per hour.
- $160.00 less for Field Technician for Small Volume Disposal (p.16). Additional sampling will not be necessary as the results from the resampling of the monitoring wells will be sufficient to determine the small volume disposal.
- $86.25 less for Shipping (p.17). See above explanation.
- $966.00 less for Analysis (p.18). See above explanation.

recycled paper

Rehabilitation activities at the site should be resumed immediately upon receipt of this letter. **The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified and will only pay rates in accordance with established criteria.** Further, the SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work. A detailed audit of work performed will be conducted at a later date and will be subject to review under the 1995 criteria.

All laboratories utilized must be certified in the state of South Carolina for volatile organic analyses in accordance with R.61-81.

On all correspondence regarding this site, please reference the site identification number 06742. If you have any questions or would like to submit additional information, please contact Joanne Cooper at (803) 734-5334.

Sincerely,

Technical Section

RE: Crossroads Grocery
Site ID: #06742
Stream Analysis in Assessment Plan Addendum received March 8, 1994
Risk-Based Corrective Action for Petroleum Releases dated June 1995
Oconee County

Dear Mr. Alexander:

The Underground Storage Tank (UST) Program of the South Carolina Department of Health and Environmental Control (SCDHEC) is currently reviewing all sites with reported releases and classifying sites based on the Risk-Based Corrective Action (RBCA) Guidance. In the past, free product has been documented at the above referenced site and Chemicals of Concern (COC) in the stream approximately 1/2 mile behind the trailor home located on a dirt road off Hwy 24/59. To ensure correct site classification under RBCA, the Department requests a cost proposal be submitted for the following scope of work:

- Conduct an exposure assessment as outlined in the Standard Limited Assessment (enclosed).
- Sample for vapors in any exposure points, if identified, that would produce either an exposure or explosive hazard.
- Purge and sample all existing monitoring wells for BTEX and MTBE.
- Sample the stream for BTEX and MTBE and include information on the stream usage, population near stream and land usage.
- Measure ground-water elevations in all existing wells and document ground-water potentiometric surface.
- Report thickness of free product in any well(s).
- Free product recovery

Since all site specific information has been reported in the above referenced reports and methods for the scope of work are detailed in the Standard Limited Assessment, a separate plan is not required. **A signed cost proposal on SCDHEC forms should be submitted by September 29, 1995.**

Based on review of the submitted cost proposal, direct billing will be provided you or your consultant for implementation of the scope of work. It is anticipated that a report will be due 60 days after the letter providing technical and financial approval.

Re: GWPD Site # 06742
Cost Proposal # 0806
Underground Storage Tank Release
Priority Ranking

Dear Mr. Alexander:

As most of you are aware, cleanup costs submitted to date have exceeded the SUPERB Account's ability to pay. In-house bills awaiting payment or under review exceed $8 million dollars.

The short term goals will be to eliminate old debt, to insure future revenues exceed expenditures, and to maintain the financial capability to address emergency situations. Actions taken to date towards this end include suspending access to direct billing on most sites. The SUPERB account has borrowed $5 million from other Departmental programs, and the program is currently processing some of the existing debt. Repayment to those programs must begin in January 1994 at $500,000 per month by the environmental impact fee. While this will quickly pay some of the existing debt, the available income to address the remaining debts or environmental problems will be significantly reduced for months to come. Therefore, the number of sites that may access direct billing must be further reduced.

The UST cleanup program will reserve most of the remaining monthly income to pay existing claims. We will attempt to maintain some cleanup activity utilizing direct billing at a few of the priority sites focusing on free product recovery and to address emergency situations.

Please note that site rehabilitation activities have been previously approved at this site via the direct billing method (per the referenced cost proposal number). Due to the relative ranking of this site, continued obligation of financial resources under direct billing is not possible at this time and approval for direct billing is hereby suspended. Please have your consultant finish the work as described in the January 4, 1994 correspondence and submitted the final invoice for this cost proposal in thirty days. SCDHEC will inform you when the status of your site warrants direct billing to be resumed.

recycled paper

However, you may proceed at your own expense with implementing the approved technical plan of action and seek reimbursement from the SUPERB Account. Please note that reimbursement typically takes a much longer period of time to process and that SUPERB funds are dispersed for reimbursement only as long as funds are available. Reimbursement requests are processed by SCDHEC in chronological order of receipt.

If you have any further questions, please contact the SCDHEC project manager at 734-5331.

Sincerely,

David G. Baize, Manager
Ground Water Protection Division

Re: Project Status
GWPD Site ID # 06742
Highways 24 & 59, Tokeena
Oconee County

Dear Mr. Alexander:

The Ground-Water Protection Division of the South Carolina Department of Health and Environmental Control has reviewed the available file data for the above referenced site. The letter to Froehling & Robertson(dated December 2, 1993) indicates that you no longer retain them as your consulting firm. At this time there is an ongoing cost proposal that was approved to perform the initial assessment. In order to close out this phase of work and the associated cost proposal, the following concerns need to be addressed:

1) the data collected during this assessment needs to be compiled into a report and submitted to this office on or before **January 31, 1994,**
2) monitoring wells MW-4 and MW-5 need to have the well casings extended to the top of the steel protective casings so that the locking well cap can be sealed and locked,
3) the stockpiled drill cuttings need to be properly covered with polyethylene or plastic until they can be disposed of,
4) there are several drums that are unlabeled that contain purge/waste water and/or free-product, these drums need to be label until disposal,
5) the passive free-product recovery canister(petrotrap) that was purchased for this site needs to be properly stored onsite until water/product levels in the wells allow recovery,
6) all invoices associated with this cost proposal need to be submitted so that we can finalize the cost proposal and pay the retainers.

recycled paper

The EAP(submitted Froehling & Robertson) that was received September 24, 1993 and the amended November 4, 1993 cannot be approved for direct billing at this time as no additional cost proposals can be approved until funding becomes available. If you wish to have this plan implemented and seek reimbursement for costs incurred, please inform me in writing and the Department will process the appropriate approval forms as expeditiously as possible.

If you have any questions, please call me at (803) 734-5455.

Sincerely,

Todd Adams

GWPD Site ID #06742
Froehling & Robertson Expanded Assessment Plan dated September 13, 1993

Dear Mr. Alexander:

The Ground-Water Protection Division (GWPD) of the South carolina Department of Health and Environmental Control has reviewed the referenced submittal. The assessment plan cannot be approved for the following reasons:

1) Proposed construction and installation details for the deep well were not included;

2) The purpose of the deep well is to define the vertical extent of ground-water contamination. The predetermined 50 foot depth of the deep well, without technical justification, could conceivably allow placement of the well screen within the contaminated portion of the uppermost aquifer. The depth that the well screen is set should be determined by field conditions and/or measurements;

3) Worst case well analysis was not proposed;

4) The plan indicated that an NPDES application (for the discharge of treated ground water) would be completed as part of the Corrective Action Plan package since a POTW was not available to receive treated ground water. The use of Class VA Corrective Action Wells (for reinjection of treated ground water) should also be considered;

5) The use of a solid slug (for fluid displacement) for aquifer testing is preferred rather than the proposed injection of fluids. In addition, the proposed use of falling head slug tests only to determine aquifer characteristics is not technically justified. Data obtained from a falling head slug test (as opposed to a rising head test) is more likely to be influenced by

recycled paper

fluid drainage into the gravel pack of the well rather than the native formation;

6) Proposals to include information concerning the impacted water supply well were not included;

7) Proposals to include information concerning public water supply wells within a 1/2 mile radius and private water supply wells within a 1/4 mile radius were not included;

8) Proposals to include information concerning any surface discharge points (streams, seeps, etc) were not included;

9) The criteria for selecting soil samples for laboratory analysis is vague;

10) Proposals to include information concerning other potential sources of contamination were not included;

11) The S.C. Boards of Registration and Section 44-2-120 of the SUPERB Act require that all hydrogeological work and submittals that include geological interpretation be supervised/sealed by a S.C. certified Professional Geologist (PG) or Professional Engineer (PE) with training and/or experience in the geological discipline.

An assessment plan **prepared in accordance with Departmental criteria and guidance** is expected on or before December 3, 1993.

The invoices for EAP preparation have been returned to Froehling & Robertson.

During an October 6, 1993 site inspection, it was noted that monitoring wells located within the UST excavation were not locked nor grouted as required by SC Underground Storage Tank Control Regulations (SCUSTCR). Please note these deficiencies were discussed during a January 26, 1993 meeting with you at the site. Confirmation that the wells have been brought into compliance with SCUSTCR must be submitted to the GWPD on or before November 5, 1993.

If you have any questions or comments, feel free to call Mark Berenbrok at (803) 734-4664.

RE: Crossroads Grocery, Oconee County
Intersection of SC Highways 24 & 59
GWPD Site ID #06742

DATE: October 7, 1993

A site inspection was made at the referenced facility on 10-06-93. Present was Eddie Clements (Appalachia I District EQC) and the writer. Two above ground tanks (containing diesel and kerosene fuels) are located on the east side on the building. A pile of soil that had been covered was located behind the building. Lengths of nylon tubing and used disposable bailers were present on top of the pile. Five (MW-1, MW-2, MW-3, MW-4, MW-5) of six monitoring wells were inspected. The following observations were made:

1) MW-1, MW-1A, MW-2, and MW-3 are flush mount wells with bolt down covers. MW-4 and MW-5 are located within a metal housing;

2) None of the inspected wells were equipped with a locking device;

3) Free product has been found in MW-1. During inspection, it was noted that the casing/screen was off-plumb to a such a degree that a passive filter canister in the well became wedged during withdrawal and could not be removed. A disposable bailer had been left in the well above the canister. This writer had to drop the bailer on top of the canister numerous times to make it become unstuck.

4) The top of the well casing in MW-4 is approximately 24 inches below the top of the metal housing. The top of casing in MW-5 is approximately level with the concrete pad surrounding the well.

The vapor monitoring wells within the UST excavation lack grouting.

Underground Storage Tank Release
Priority Ranking

Dear Mr. Alexander:

All releases from regulated underground storage tanks that have been reported to this Department have been prioritized using a ranking system that evaluates environmental and health related factors. The ranking system identifies those sites that represent the most serious threats where the Department should be allocating available SUPERB monies.

Currently, the referenced site ranks higher than many other sites (i.e., represents a significant environmental or health threat). Please note that site rehabilitation activities already initiated under the direct billing method should be completed in an expeditious manner.

If you have any further questions, please contact Mr. David Baize or Mr. Chris Doll at 734-5331.

Sincerely,

Stanley L. Clark

Re: Crossroads Grocery
SC Highways 24 & 59, Tokeena, SC, Oconee County
GWPD Site ID #06742

Dear Mr. Alexander:

The Ground-Water Protection Division (GWPD) of the South Carolina Department of Health and Environmental Control (SCDHEC) has spoken with your consultant, Froehling & Robertson, concerning the referenced facility. Free product (in MW-1) has been confirmed at levels that require rehabilitation. This letter addresses the following topics: Free Product Recovery, Expanded Assessment Plan, SUPERB Payment of the Expanded Assessment Plan, and Enforcement.

Free Product Recovery

In accordance with Section 280.64 of the SCUSTCR, free product removal to the maximum extent as practicable and in a manner that minimizes the spread of contamination must continue.

Expanded Assessment Plan

The extent and severity of soil and ground water-contamination at this site must be investigated pursuant to Section 280.65 of the SCUSTCR. Your consultant was informed that the assessment report requested in the Department's April 21, 1993 letter should be incorporated into the assessment report requested below. An Expanded Assessment Plan (EAP) that includes specifications for the complete site assessment (e.g. a sufficient number of well locations, water quality evaluation, aquifer property evaluations), such that a complete Corrective Action Plan can be prepared, must be submitted. Please read the enclosed Assessment Guidance for a complete explanation.

SUPERB Payment of the EAP

The requested EAP (2 copies) must be submitted on or before **October 29, 1993.** If the Assessment Plan is to be implemented under a Cost Proposal from the Contractor, the Cost Proposal must be submitted with the EAP. If a Cost Proposal is not submitted with the plan, cost for EAP implementation can be recovered through

recycled paper

reimbursement or Direct Contractor Payment. The cost associated with preparation and submittal of the EAP may be recovered through Direct Contractor Payment or reimbursement.

On all future correspondence related to this site, please reference GWPD Site ID 06742. If you have any questions or comments, feel free to call at (803) 734-4664.

Sincerely,

Mark Berenbrok, Hydrogeologist

RE: Crossroads Grocery, Oconee County
GWPD Site #06742

DATE: September 1, 1993

Per Jim Buscher of F&R, free product in MW-1 has increased in thickness to about two feet. Recovery is continuing. Jarrett Rice subsequently informed me that the liquid depth in the well is insufficient for the filter canister (for passive free product recovery) to work. They'll keep it available in the expectation that water levels should rise in the near future.

Froehling & Robertson ~~was~~ instructed to develop an EAP for the site & delay submittal of AR due 8-18-93. The AR should be incorporated into the EAR.

Re: Crossroads Grocery
SC Highways 24 & 59, Tokeena, SC, Oconee County
GWPD Site ID #06742

Dear Mr. Alexander:

Please find enclosed the inventory records you submitted earlier this year. Please note that since it appears you are using inventory control with tightness testing as your primary means for release detection for your tanks, that records must be reconciled monthly in accordance with Section 280.43(a) of the South Carolina Underground Storage Tank Control Regulations. In addition, the UST system must be tightness tested every five years. This method of release detection can only be used until December 1998 or until ten years after the tanks have been installed. Also enclosed is information concerning release detection for UST systems.

If you have any questions or comments, feel free to call at (803) 734-4664.

Sincerely,

Mark Berenbrok, Hydrogeologist

GWPD Site ID #06742
Froehling & Robertson Assessment Plan and Associated Cost Proposal dated March 11, 1993

Dear Mr. Alexander:

The Ground-Water Protection Division of the South Carolina Department of Health and Environmental Control has reviewed the referenced submittal. The assessment plan has been approved with the following comments:

1) Unless a monitoring well is installed in the **immediate vicinity** of the former UST excavation or dispenser island, this office does not recommend that soil samples be retained for laboratory analysis unless field conditions warrant otherwise. The collection of ground-water samples will serve the purpose to assess the extent of contamination;

2) MTBE analysis for soil samples is not required. TPH analysis for water samples is not required;

3) Purge/developmental waters and soil cuttings should be secured and disposed of in accordance with SCDHEC guidance;

4) As discussed in the Department's January 20, 1993 letter and our March 19 conversation, a site assessment was not performed during the closure of the UST system that was removed from the ground in June 1990. The submitted assessment plan should be adequate to determine **if groundwater** has been impacted by a release from the former UST system. However, the assessment of the former UST excavation and dispenser island must be performed. As discussed with James Buschur, three to four soil borings drilled to a depth of 12 feet should be adequate to assess the former UST area. Worst case soil samples should be analyzed for BTEX and TPH (high and low fractions). If significant contamination is found, at least one of the borings should be completed as a

recycled paper

monitoring well. If this occurs, the Department will pay for the installation and sampling of the well minus the cost of the soil boring and associated samples. Please note that any costs associated with installation, sampling, or interpretation of data obtained from the soil borings should not be billed to the SUPERB account.

The associated cost proposal will be kept on file so that direct billing can begin. Any rates and/or other criteria included therein may have been adjusted on the cost proposal to insure compliance with current SUPERB program criteria per Section 44-2-20(2). Please reference CP #0806 on all pertinent invoices and correspondence. A copy of the SCDHEC's cost proposal spreadsheet that reflects adjustments to items not meeting established criteria is enclosed. **Items in the Cost Proposal not appearing on the enclosed spreadsheet have been deemed inappropriate by the SCDHEC and should not be billed to the SCDHEC.** If additional justification is provided, the SCDHEC may allow those previously deleted items to be paid by direct contractor payment. All invoices will be processed as expeditiously as possible as long as SUPERB funds are available. In accordance with the implementation schedule provided in the plan, the assessment report shall be submitted on or July 2, 1993.

As a payee, you must retain all pertinent technical and financial documents related to this site in accordance with Section 44-2-130 of the SUPERB statute. A detailed audit of work performed will be conducted at a later date and will be subject to review under the current criteria. If it is determined that inappropriate payments were made, SCDHEC will seek cost recovery.

All laboratories utilized must be certified in the state of South Carolina for volatile organic analyses in accordance with R.61-81. All monitoring wells and piezometers, whether temporary or permanent, must be installed by or under the **direct** supervision of a S.C. certified well driller as required by Section 40-23-10 of the 1976 SC Code of Laws. All hydrogeological work and submittals that include geological interpretation are required by the S.C. Boards of Registration and by Section 44-2-120 of the SUPERB Act to be supervised/sealed by a S.C. certified Professional Geologist (PG) or Professional Engineer (PE) with training and/or experience in the geological discipline.

The assessment must be: 1) conducted by or under the supervision of appropriately certified SC registered professional(s), 2) conducted by a contractor with the necessary bonding or insurance (unless #1 above is satisfied), 3) conducted in accordance with accepted industry standards, 4) technically justified, 5) completed in a cost effective manner that adequately

protects human health and the environment, and 6) conducted in compliance with all SUPERB criteria for direct billing or reimbursement.

The SCDHEC reserves the authority to pay only for work properly performed and/or technically justified. The SCDHEC will only pay rates in accordance with established criteria. Further, the SCDHEC reserves the right to question and/or reject costs if deemed unreasonable. The SCDHEC reserves the right to audit project records at any time during the project or after completion of the work. Also, the SCDHEC will seek cost recovery where appropriate. This notice to proceed with the work plan does not, in any way, acknowledge SCDHEC concurrence that all the elements contained therein will be necessary at this site.

If the above criteria are not followed, the SCDHEC reserves the right to initiate one or more of the following actions as appropriate; 1) Refer the contractor to the Boards of Registration for Professional Geologists and Engineers, 2) seek cost recovery in accordance with Section 44-2-50 of the SUPERB Act, and/or 3) prohibit future participation in the SUPERB program by the contractor in accordance with Section 44-2-120 of the SUPERB Act.

If you have any questions or comments, feel free to call at (803) 734-4664.

Sincerely,

Mark Berenbrok, Hydrogeologist

Monitoring Well Approval

Approval is hereby granted to: Froehling & Robertson
1310 Lowndes Hill Road
Greenville, SC 29607
Attn: Jim Buschur

RE: Crossroads Grocery
SC Highways 24 & 59, Tokeena, SC, Oconee County
GWPD Site ID #06742

for the construction of monitoring wells designated MW-1 through MW-5 in accordance with the construction plans and specifications dated March 11, 1993. These wells will be constructed to the approximate depth of 30 feet below the surface and screened in the uppermost aquifer for the purpose of monitoring for the presence of hydrocarbon contamination.

Conditions: That the latitude and longitude, actual construction details, and all analytical data be submitted with the required report. That the detection of any free product or dissolved hydrocarbon constituents be reported to the Department in accordance with R.61-92, Part 280.50(a) of the South Carolina Underground Storage Tank Control Regulations. That the district hydrogeologist (Eddie Clements, 260-5677) must be notified at least 48 hours prior to well installation.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and the Department of Health and Environmental Control Regulations R.61-71.

Date of Issue: April 29, 1993

FROM: Mark Berenbrok, Hydrogeologist
UST State Corrective Action Section
Ground-Water Protection Division

RE: Crossroads Grocery
Highways 24 & 59, Tokeena, SC, Oconee County
GWPD Site ID #06742 & 12765

DATE: January 27, 1993

A site inspection was made at the referenced facility on 1-26-93. Present was Neil Alexander and the writer. Mr Alexander had received the Dept's letter concerning the site assessment and tightness testing. Arrangements had been made to have the system tested. Although he stated that soil samples had been taken when the old system was closed, the tank installer had recently informed him that an assessment was not conducted when the old tanks were closed in 1990 since it wasn't required. I informed him this was incorrect and that any assessment information must be submitted immediately. The requirements for the assessment plan were discussed.

Three observation wells were located in the tank excavation. None of the wells were locked or grouted. Release detection requirements were discussed and Mr Alexander was informed that the wells must be grouted and secured.

Estimates for Water Tie-in

DATE: January 21, 1993

Pioneer Water Company services the area. The fee for the tie-in is $475.00 ($425 for installation and hook-up, $50 for membership fee)

Two of the nine plumbers contacted gave estimates for running the water line as follows:

- Gary Deaton, 882-7470, estimate = $730.00 for installation (24 inches deep), approximately 550 feet of 1 inch schedule 40 PVC pipe, PR valve, cut-off valve, and box;

- David Cook, 647-9538, estimate = $802.50 for installation (24 inches deep), approximately 521 feet of 1 inch schedule 40 PVC pipe, PR valve, cut-off valve, and box;

Both said it would take about one day for installation. It was decided to award the installation of the line to Mr. Deaton.

Purchase order #W1250 was established for $730.00 for Gary Deaton. Purchase order #W1251 was established for $500.00 for Pioneer Water Company.

PS Form 3800, June 1991

STICK POSTAGE STAMPS TO ARTICLE TO COVER FIRST CLASS POSTAGE, CERTIFIED MAIL FEE AND CHARGES FOR ANY SELECTED OPTIONAL SERVICES (see front)

1. If you want this receipt postmarked, stick the gummed stub to the right of the return address leaving the receipt attached and present the article at a post office service window or hand it to your rural carrier (no extra charge).

2. If you do not want this receipt postmarked, stick the gummed stub to the right of the return address of the article, date, detach and retain the receipt, and mail the article.

3. If you want a return receipt, write the certified mail number and your name and address on a return receipt card, Form 3811, and attach it to the front of the article by means of the gummed ends if space permits. Otherwise, affix to back of article. Endorse front of article **RETURN RECEIPT REQUESTED** adjacent to the number.

4. If you want delivery restricted to the addressee, or to an authorized agent of the addressee, endorse **RESTRICTED DELIVERY** on the front of the article.

5. Enter fees for the services requested in the appropriate spaces on the front of this receipt. If return receipt is requested, check the applicable blocks in item 1 of Form 3811.

6. Save this receipt and present it if you make inquiry.

☆ U.S. GPO: 1991—302-916

PS Form **3800**, June 1991 *(Reverse)*

SENDER:

- Complete item[redacted]nd/or 2 for additional services.
- Complete items [redacted] and 4a & b.
- Print your name and address on the reverse of this form so that we can return this card to you.
- Attach this form to the front of the mailpiece, or on the back if space does not permit.
- Write "Return Receipt Requested" on the mailpiece next to the article number.

I a[redacted]vish to receive the following services (for an extra fee):

1. ☐ Addressee's Address
2. ☐ Restricted Delivery

Consult postmaster for fee.

3. Article Addressed to:

Mr. Neil Alexander
Crossroads Grocery
Rt. 2, Box 149
Westminster, SC 29693

4a. Article Number

P 230 631 897

4b. Service Type

☐ Registered ☐ Insured
☑ Certified ☐ COD
☐ Express Mail ☐ Return Receipt for Merchandise

7. Date of Delivery

DO 1-22-93

5. Signature (Addressee)

Sommer McGuffin

6. Signature (Agent)

8. Addressee's Address (Only if requested and fee is paid)

Re: Crossroads Grocery
SC Highways 24 & 59, Tokeena, SC, Oconee County
GWPD Site ID #06742

Dear Mr. Alexander:

The presence of a regulated substance (petroleum) has been documented in a water sample obtained from a private water supply well located southeast of Crossroads Grocery, a convenience store that contains a regulated underground storage tank (UST) system. Departmental records indicate that you were the owner of an UST system (registration #N-37-NO-06742) at Crossroads Grocery that was removed from the ground in June 1990 and are the owner of a new UST system (registration #N-37-NO-12765) at the same site that was installed in July and August 1990.

Requirements for the registration, installation, upgrading, closure, and assessment of UST systems are established by South Carolina Underground Storage Tank Control Regulations (SCUSTCR) and implemented by the Ground-Water Protection Division (GWPD) of the South Carolina Department of Health and Environmental Control (SCDHEC).

Subpart G of SCUSTCR requires that before permanent closure or a change-in-service of a UST system is completed, owners and operators must measure for the presence of a release where contamination is most likely to be present at the UST site. The results of this environment assessment were to be submitted to the Department as a condition of the Permit to Construct for the new UST system. Since this condition had not been met, the Department again requested the report in a July 6, 1992 letter to you. To date, the environmental assessment has not been received.

As mentioned above, a nearby water supply well has been impacted by petroleum hydrocarbons. Section 280.51 of SCUSTCR requires that owners and operators must determine if an UST system is the source of off-site impacts. These impacts include the discovery of regulated substances in surface and drinking waters.

recycled paper

As a result, the following procedures must be implemented immediately:

- If the underground storage tank (UST) system is still in operation or still contains product, the immediate removal of the product from the UST system and/or immediate performance of a complete system test must be performed. Confirmation of product removal or current results of tightness tests which verify that all existing systems (i.e. USTs and associated lines) are not leaking, must be submitted on or before **February 19, 1993** in accordance with Section 280.52 of the SCUSTCR;

- An assessment plan to determine the extent and severity of possible soil and groundwater contamination at the site must be submitted to my attention at the GWPD on or before March 12, 1993. The assessment plan shall include, but not be limited to, the following:

  1) Brief discussion of the background, purpose and scope of the proposed investigation;

  2) A summary of the initial abatement actions taken to eliminate the source of contamination (i.e., USTs have been removed from the ground, emptied of product, repaired, etc.);

  3) A qualitative description, in the form of a short summary, of all <u>known</u> contamination present at the facility;

  4) An overview of the local hydrogeology;

  5) Number, location (with justification) and approximate depth of all proposed soil borings;

  6) Number, location (with justification), approximate depth, and construction details for all proposed ground-water monitoring wells (a minimum of three triangulated wells to determine ground-water flow direction is required) and proposal to conduct aquifer tests to determine the hydraulic characteristics of the site;

  7) A <u>scaled</u> site map that includes the locations of previous and/or current source(s) of contamination (USTs, product piping, dispensers, etc.), buildings, above-and below-ground utilities, and other appurtenances that could potentially affect contaminant migration or could become impacted by

contaminants. Also include the locations of all proposed soil borings and monitoring wells;

8) Vicinity maps which show topography, surrounding land use, all private and public water supply wells within 500 feet of the UST system, etc.;

9) Information regarding any identified wells;

10) Proposed number of soil samples to be collected. If the USTs contained gasoline, samples should be analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX) and total petroleum hydrocarbons (TPH). If the USTs were used for storing diesel fuel, kerosene, waste oil or other heavier distillates, samples should be analyzed for TPH;

11) Proposed number of ground-water samples to be collected. If the USTs contained gasoline, samples should be analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX). If the USTs were used for storing diesel fuel, kerosene, waste oil or other heavier distillates, samples should be analyzed for naphthalene;

12) Sampling protocol and EPA analytical methods;

13) Operating records, including inventory records and leak detection method and records;

14) List of items that will be included in the assessment report (e.g., well construction details, potentiometric surface map, etc.);

15) Implementation schedule.

File information reveals that none of the exclusions listed in Section 44-2-110 of the State Underground Petroleum Environmental Response Bank Act (SUPERB) apply to this site. Therefore, reasonable costs for site assessment and/or rehabilitation can be paid, either by direct billing or reimbursement from the SUPERB fund in accordance with the enclosed SUPERB guidance, should site rehabilitation be necessary. Prior to release of SUPERB funds, this office must have written confirmation from you of the existence (or nonexistence) of an environmental insurance policy or financial responsibility mechanism for this site.

The Department expects responsible parties to comply with the activities required in the SCUSTCR. Failure to comply with these

regulations and/or requests may result in initiation of enforcement action (and possible fines) against the Responsible Party.

If you have any questions or comments, feel free to call at (803) 734-4664.

Sincerely,

Mark Berenbrok, Hydrogeologist

Estimates for Water Tie-in

DATE: January 21, 1993

Pioneer Water Company services the area. The fee for the tie-in is $475.00 ($425 for installation and hook-up, $50 for membership fee)

Two of the nine plumbers contacted gave estimates for running the water line as follows:

- Gary Deaton, 882-7470, estimate = $730.00 for installation (24 inches deep), approximately 550 feet of 1 inch schedule 40 PVC pipe, PR valve, cut-off valve, and box;

- David Cook, 647-9538, estimate = $802.50 for installation (24 inches deep), approximately 521 feet of 1 inch schedule 40 PVC pipe, PR valve, cut-off valve, and box;

Both said it would take about one day for installation. It was decided to award the installation of the line to Mr. Deaton.

Purchase order #W1250 was established for $730.00 for Gary Deaton. Purchase order #W1251 was established for $500.00 for Pioneer Water Company.

MEMORANDUM

TO: File

FROM: Mark Berenbrok, Hydrogeologist
UST State Corrective Action Section
Ground-Water Protection Division

RE: Stephens Well Contamination/Crossroads Grocery
Highways 24 & 59, Tokeena, SC, Oconee County
GWPD Site #06742 & 12765

~~Stephens Well Contamination~~

DATE: January 18, 1993

A site visit was made at the residence of Tommi Stephens by Eddie Clements (Appalachia I District EQC) and the writer on 1-15-93. Ms Stephens obtains her water via a private water supply well located in front of her trailer on Malibu Road. She stated that about one year ago she noticed her water had acquired a "taste" and recently informed the Appalachia I EQC office concerning the problem. A water sample obtained by Eddie Clements on 1-11-93 and analyzed by the state lab contained gasoline constituents (verbal communication with Sandra Fleming on 1-15-93). A convenience store with a regulated UST system is approximately 250-300 feet uphill from Ms Stephens' trailer. No other sources of contamination other than a small (<150 gallons) AGT for heating oil at a nearby trailer were observed. Ms Stephens was instructed again to obtain an alternate water supply until a hook-up to a water system can be arranged. During a phone conversation with David Crooks (plumber) on 1-18-93, Mr Crooks stated he had noticed an oily residue on the intake plumping of Ms Stephens' pump when he had replaced it about one year ago.

RE: Crossroads Grocery, Report of Data Collection Activities
GWPD Site ID #06742

Dear Mr. Adams:

The information contained in this report is provided to you in order to close out Froehling & Robertson's work under the existing cost proposal number 806. Additionally, we are resubmitting Invoice No. 24670 for the EAP. It was originally returned along with Mark Berenbrock's correction letter of October 13, 1993. Our response was submitted on November 4, 1993, but the invoice was not sent at that time. Since this represents a work effort on our part, we would expect full consideration and payment of the invoiced amount. All items referred in your letter of January 4, 1994 are covered:

1) A report, updating our activities and conclusions is provided herein, following item number 6.
2) Casings on motoring wells MW-4 and MW-5 have been extended to near the top of the steel protective casing, allowing easier locking and sampling.
3) The drill cuttings have been covered with polyethylene, for storage until final disposal is arranged.
4) Labels have been affixed to the drums containing waste water/product.
5) The free product recovery canister has been returned to Neil Alexander, owner.
6) The final invoice was mailed to Neil Alexander on December 10, 1993. He should have forwarded it to you by this time

The report of our activities and conclusions follow. Please contact me if you have any questions concerning this matter.

Sincerely,
FROEHLING & ROBERTSON, INC.

Jim Buschur, P.G.
Project Manager

GREENVILLE, SOUTH CAROLINA

JANUARY 26, 1994

Summary of Work

Crossroads Grocery is located at the intersection of SC Highways 24 and 59 in Tokeena, South Carolina. (Figures 1 and 2) Several underground storage tanks (UST) were removed in June, 1990 from the property. They were replaced with a new UST system in July and August of 1990. The presence of potential petroleum contamination was not determined when the original tanks were pulled and to our knowledge no such information is available.

In January, 1993, a resident living approximately 600 feet downgradient from the grocery reported gasoline or petroleum taste in water from their water supply well. Since the nearest source of such contamination was the grocery, further assessments were ordered by the South Carolina Department of Health and Environmental Control to confirm the nature of the problem and identify it's source.

The purpose of the investigation by F&R was to determine the hydrologic relationship between the Crossroads Grocery Store and the impacted water well. Three standard penetration test (SPT) borings and five monitoring wells were completed in the areas of the former UST's and areas downgradient. One SPT boring was converted to a monitoring well at the direction of the SCDHEC project manager since evidence of soil impacts was noted during the drilling.

Upon completion of the drilling program, soil and water samples were analyzed at a S.C. Certified Laboratory. The results indicated that the former UST installation had impacted soils in the vicinity of the UST's plus, groundwater had been affected at least as far as monitoring well MW-5, located near the existing water supply well.

During the summer of 1993, free product was observed in monitoring well MW-1,a. Periodic bailing of the well was conducted in order to purge the product from the well. The product was placed in drums located on-site. Water levels declined in the early fall so that the "Keck" brand automatic bailer became inoperable.

Technical data supporting the results and conclusions of this report are contained in the attached appendixes.

11. PUMPING LEVEL Below Land Surface
_____ ft. after _____ hrs. pumping _____ G.P.M.
Pumping Test: [ ] Yes (Please enclose) [X] No
Yield _____

12. WATER QUALITY
Chemical Analysis [X] Yes [ ] No Bacterial Analysis [ ] Yes [X] No
Please Enclose Lab Results.

13. ARTIFICIAL FILTER (Gravel Pack) [X] Yes [ ] No
Installed from 19 ft. to 30 ft.
Effective size _____ uniformity coefficient _____

14. WELL GROUTED? [X] Yes [ ] No Bentonite 18'-19'
Neat Cement [X] Sand Cement [ ] Concrete [ ] Other [ ] _____
Depth From 0 ft. to 18 ft.

15. NEAREST SOURCE OF POSSIBLE CONTAMINATION: _____ Feet _____ Direction
Former UST location Type
Well disinfected [ ] Yes Type _____
upon completion [X] No Amount _____

16. PUMP: Date Installed _____ not installed [X]
Mfr. name _____ model no. _____
H.P. _____ volts _____ length of drop pipe _____ ft. capacity _____ gpm
TYPE: [ ] Submersible [ ] Jet (shallow) [ ] Turbine [ ] Jet (deep) [ ] Reciprocating [ ] Centrifugal

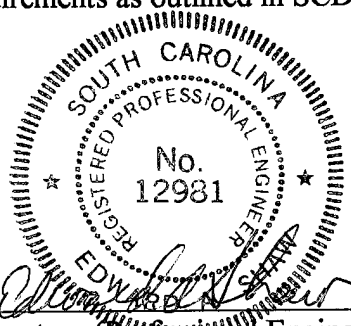
A. Laboratory Analyses and Chain of Custody Documentation

CERTIFICATION

I hereby certify that the information contained in this report and attachments, is true, accurate, complete, and satisfies all the criteria and requirements as outlined in SCDHEC's letter dated September 15, 1995.



Edward A. Shaw
Printed Name (Professional Engineer)

Signature (Professional Engineer)

INTRODUCTION

In accordance with instructions outlined in a letter from South Caroline Department of Health and Environmental Control (SCDHEC), the information in this Limited Assessment Report is provided. ESCM & Associates, Inc., (ESCM) was commissioned by Neil Alexander (owner) to perform environmental testing at Crossroads Grocery. Crossroads Grocery is a gasoline station/convenient store and is located at the intersection of State Highways 24 and 59 in Westminster, South Carolina (Figures 1 and 2).

FIELD ACTIVITIES, METHODOLOGY, AND RESULTS

On December 6, 1996, ESCM & Associates, Inc., (ESCM) personnel measured the hydrocarbon vapor concentrations at all exposure points (Figure 3). The hydrocarbon vapor concentrations at the monitor well openings were measured using an organic vapor analyzer - flame ionization detector (OVA-FID). An examination of the OVA-FID readings indicates that the greatest concentration of vapors was measured in monitor wells MW-1A, MW-1, MW-2, and MW-4 with 5000+ ppm at each (Figure 3). These same monitor wells either contained free product or contained dissolved-phase hydrocarbons as discussed below.

On December 6, 1996, ESCM personnel measured the oxygen (O_2) and lower explosive levels (LEL) at each monitor well opening (Figure 4). The O_2 and LEL readings were measured using an oxygen meter/explosimeter. An examination of the O_2 and LEL readings indicates explosive levels in monitor wells MW-1A, MW-1, MW-2, and MW-4. These same monitor wells either contained free product or contained dissolved-phase hydrocarbons. These same monitor wells had 5000+ hydrocarbon vapor concentrations as measured with the OVA-FID.

On December 6, 1996, ESCM personnel collected ground-water samples from all the monitor wells on and off site which did not contain free product. Ground-water samples were collected from monitor wells MW-2, MW-3, and MW-4. Monitor well MW-5 was not sampled because it was destroyed. Surface water samples were collected from an unnamed stream located approximately ½ mile south of the trailer home near monitor well (Figure 2). The water samples were packed in an iced cooled insulated chest and shipped to Southern Petroleum Laboratories for analysis of BTEX and MTBE (EPA Method 8020). An examination of the laboratory results indicates that the greatest BTEX concentration was measured in ground-water samples collected from monitor well MW-4 with 19,000 ppb benzene, 44,000 ppb toluene, 3,100 ppb ethylbenzene, and 18, 000 ppb total xylenes (Figures 5 and 6, Table 1, Appendix A). An examination of the laboratory results indicates that the greatest MTBE concentration was measured in ground-water samples collected from monitor well MW-4 with 15,000 ppb (Figure 7, Table 1, Appendix A). BTEX and MTBE concentrations were measured in the water samples collected from the stream with 30 ppb benzene, 13 ppb toluene, non-detect level of ethylbenzene, 15 ppb total xylenes, and 290 ppb MTBE (Figures 5 through 7, Table 1, Appendix A).

The site is located in a rural residential area that is serviced by Pioneer Water. Pioneer Water purchases water for public use from the Westminster Water Department and from Seneca Light and Water. According to Mr. Jerry Wirtz, Assistant Superintendent of the Westminster Commissioner of Public Works, Westminster pumps water for public use from the Chattooga River. The Chattooga River is located approximately three to four miles northwest of Westminster, South Carolina. According to Mr. Dewitt Martin, Assistant Director of Utilities at Seneca Light & Water, Seneca pumps water for public use from Lake Keowee. Lake Keowee is located approximately four miles east of Seneca. The unnamed stream located ½ mile south of monitor well MW-5 empties into Mud Creek. Mud Creek empties into Beaverdam Creek which empties into Lake Hartwell. Lake Hartwell is used as a public water source for many communities in Georgia and South Carolina.

On December 6, 1996, ESCM & Associates, Inc., gauged monitor wells MW1A, MW1, MW2, MW3, MW4, and MW5 (Figure 2). Monitor well MW1A contained 3.70 feet of free-phase hydrocarbons and four gallons of free-product was bailed out of this well. Free-product was detected to the bottom of MW1 therefore neither the actual free product thickness nor the groundwater level could be measured in this monitor well. One fourth of a gallon was bailed out of monitor well MW-1. Monitor well 2 contained 0.04 feet of free-phase hydrocarbons. The depth to groundwater was measured in the remaining wells. No free-phase hydrocarbons were detected in monitor wells MW-3, MW-4, and MW-5. On December 8, 1993, the elevation of the top of casing (TOC) and land surface grade at each monitor well, except MW5, were measured relative to a temporary benchmark (TBM) using a surveyor's transit (EAP Addendum, ESCM, February 1994, Figure 3). On December 6, 1995, monitor well MW-5 was surveyed (Figure 8). Depth to groundwater measurements were referenced to the top of casing (TOC) at each well (Figure 8). Based on the water level readings obtained on December 8, 1993, the groundwater appears to be flowing in a southwesterly direction (EAP Addendum, ESCM, February 1994, Figure 3). Based on the water level readings obtained on December 6, 1995, the groundwater appears to be flowing in a southwesterly direction (Figure 8).

RECOMMENDATIONS

In accordance with SCDHEC's letter dated September 13, 1995, the data in this report is presented for the purpose of ensuring correct site classification under Risk-Based Corrective Action (RBCA). Based on the RBCA Classification/Priority System, this site should be placed in Classification 1 since chemicals of concern (COC) exist in the unnamed stream located ½ mile south of the trailer home near monitor well MW-5. Initial abatement activities should be re-started immediately.

II. REPORT OF FINDINGS

A. Introduction

The UST owner/operator is Mr. Neil Alexander, Crossroads Grocery, Route 2, Box 149, Westminster, Oconee County, South Carolina. The site identification number is # 06742. The contractor that conducted the Limited Assessment is ESCM & Associates, Inc., 1781 Mars Hill Road, Watkinsville, Georgia, 30677. Any questions regarding this report should be directed to Mr. Edward Shaw at (706) 769-4434 or Ms. Mirta Carpenter at (706) 886-7634. The SLA approval letter is dated July 31, 1996, and field work began on September 9, 1996. Crossroads Grocery is a gasoline station/convenient store currently in operation. The source of the hydrocarbon constituents measured at the site is most likely the former tankpit (Figure 1) which was closed in June of 1990. New underground storage tanks were installed in July and August of 1990. The new underground storage tanks have passed tightness and line tests in February of 1993 and in January of 1997. The property surrounding the site is mostly rural residential and/or pasture lands. Free-phase hydrocarbons and dissolved-phase hydrocarbons have been detected in the ground-water monitor wells on the property, in a down-gradient monitor well on the adjacent residential property, and in a down-gradient stream approximately 1200 feet south of the site.

B. Site Characteristics

1. Site Geography

Crossroads Grocery is located within the Inner Piedmont Geologic Province. The Inner Piedmont extends from Alabama to North Carolina and is approximately 50 miles wide, on average. The Inner Piedmont is a region of gently rolling to hilly slopes with narrow-stream valleys. The elevation increases gradually from the southwest part of South Carolina to the northeast part of the state. Local relief is mainly in tens of feet but ranges to several hundred feet (Godley & Anderson, 1979). Crossroads Grocery is located on the topographically high position at 932 feet above mean sea level according to the Fair Play Topographic Quad (1958, photorevised 1979). The surrounding land slopes down away from the site in all directions. Surface drainage flows primarily to the south where the slopes are steeper.

2. Exposure Analysis and Tier 1 Evaluation

A survey of all receptors within a 1000 foot radius of the site was conducted by ESCM personnel. Several residential trailers exist within a 1000 foot radius of the site. However, only one trailer 428 feet south of the site had a drinking water well (Figure 2). This drinking water well was permanently closed when the resident of the trailer reported a hydrocarbon taste in the water from their water well in January of 1993. SCDHEC officials immediately had the well permanently closed and the resident was hooked up to the local public water supply. According to a telephone discussion between ESCM personnel and Mr. Eddie Clements of the SCDHEC Anderson District Office on December 3, 1996, no other water supply wells were located within a 1000 foot radius during Mr. Clements water well survey in 1993. A list of all water wells reported to the Anderson District Office was provided by Mr. Rob Devlin on December 3, 1996; no water wells were listed within 1000 foot radius of the site. According to Mr. Devlin and Mr. Clements, the closest public supply wells are located approximately three miles east of the site off of SC Highway 24 (West Oak Hwy). These public supply wells are listed at Timber Lake 1 and 2. One unnamed stream is located approximately 1100 feet southeast of the site. This unnamed stream empties into Mud Creek. Mud Creek empties into Beaverdam Creek which empties into Lake Hartwell. Lake Hartwell is used as a public water source for many communities in Georgia and South Carolina. Underground utilities are located in the right-of-way section of the property including water lines and natural gas lines (Figure 2).

The exposure assessment for the Tier 1 evaluation was conducted using three sub-steps as follows: (1) a site conceptual exposure model was developed (Tables 1 and 2); (2) the data required to estimate the exposure dose for the complete pathways identified in (1) was identified; and (3) the dose was estimated.

Based on the site conceptual exposure model (Tables 1 and 2), the risk-based screening levels (RBSLs) for the ground water ingestion pathway needs to be determined for this site. The RBSLs for soil do not need to be calculated nor can they be calculated since all constituents analyzed for in the soil samples collected throughout the site on September 10, 1996, measured non-detect. No other previous soil data is available. The previous consultant, Froehling & Robertson, Inc., did not collect soil samples during the installation of monitor wells MW-1A and MW-1 through MW-5. Therefore, the average COC concentration in the source area for the soil leaching to ground water pathway is not available and the leachability model for petroleum contaminated soil can not be used. The vapor inhalation pathway RBSLs do not need to be calculated nor can they be calculated since no indoor nor outdoor hydrocarbon vapor readings measured greater than 0 ppm throughout the site (Limited Assessment Report, ESCM & Associates, January 1995). On December 6, 1996, ESCM personnel measured the hydrocarbon vapor concentrations at all exposure points (Limited Assessment Report, Figure 3). Hydrocarbon vapor concentrations were detected only in the monitor well openings of those wells that either contained free product or contained dissolved-phase hydrocarbons (Limited Assessment Report, Figure 3).

The risk-based screening level for benzene, toluene, ethylbenzene, and xylenes in the ground water ingestion pathway are based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories* as stated in SCDHEC's "Risk-Based Corrective Action for Petroleum Releases" (June, 1995, Table 4). The RBSLs for ground water are listed in Table 3 of this report.

Tier 1 action is decided based on the comparison of the risk-based screening levels for each pathway and the actual data measured during field analyses. At Crossroads Grocery only the ground water ingestion pathway needs to be considered at this time. Based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories,* the dissolved-phase hydrocarbon concentrations measured in monitor wells MW-2, MW-4, MW-5, MW-6, and MW-7 exceed the RBSLs established for ground water. The dissolved-phase hydrocarbon concentration of benzene measured in the surface water sample collected upstream in the unnamed stream southeast of the site also exceeded the RBSL establish for benzene in ground water. Based on the comparison of the risk-based screening levels for groundwater and the actual data measured during field analyses, the preparation of a Corrective Action Plan (CAP) is warranted at this time.

3. Utilities Survey

An underground water line is located parallel to West Oak Highway in the right-of-way of the site property. An underground natural gas line is located parallel to West Oak Highway in the right-of-way of the property. The underground gas line is buried approximately 12 feet for the centerline of the highway (Figure 2).

4. Regional and Site Geology

a. Regional Geology and Hydrogeology

Crossroads Grocery is located within the Inner Piedmont Geologic Province. The Inner Piedmont extends from Alabama to North Carolina and is approximately 50 miles wide, on average. The rocks of the Piedmont Province range from low grade metamorphosed sediments and volcanics to high grade metasedimentary and meta-igneous rocks and intrusive mafic to felsic igneous rocks. These rocks are characteristically folded and faulted and are believed to be of late Precambrian to early Paleozoic in age. The primary rocks of this region include granitic gneiss, biotite gneiss, amphibolite, and schists, which are usually well foliated due to tectonic activity throughout the geologic history of the region (Johnson, 1964; Secor, 1987). These crystalline rocks have been structurally deformed into a series of recumbent isoclinal folds with axial planes dippings to the southeast. Furthermore, these rocks have undergone post-genetic stresses which have caused the formation of a number of fractures (Secor, 1987).

Since the Inner Piedmont Province consists of fractured media, the permeability depends on the width of the fractures and their density, or spacing. Overall, the igneous, metamorphic, and sedimentary rocks in this region have very low permeability and hydraulic conductivity range from one to five feet/day. With lower effective porosities of 1 to 5 percent, flow velocity through the fractured rock will be 0.04 to 1.0 ft/day. The Inner Piedmont region characteristically has a humid climate which enhances chemical weathering of bedrock and results in the formation of saprolite. Saprolite forms when bedrock decomposes in place due to chemical weathering. The chemical and physical characteristics of the saprolite depends on the relative quantities of parent minerals in the original bedrock. The flow domain in the Piedmont consists of the following materials: a thin layer of soil, a variably thick zone of chemically weathered bedrock (saprolite), a transition zone of less-well weathered rock that gradates into a relatively unweathered fractured bedrock (Dowd, Wenner, Carpenter; 1993).

b. Site Geology and Stratigraphy

The geologic unit mapped at Crossroads Grocery is of Upper Precambrian to Devonian in age and consists of biotite gneiss and migmatite which is light to dark gray, fine to medium-grained, and layered. Typical mineral assemblages contain garnetiferous biotite, sillimanite, oligoclase, and quartz, lesser amounts of banded granitoid layers, and veins and segregations of gneissic pegmatites, and biotite sillimanite schist (Overstreet & Bell, 1965). During the installation of monitor wells MW-6 and MW-7 and the drilling of soil boring SB-1 and SB-2 on September 9 and 10, 1996, the predominant lithology of the soils noted was course silt with micro veins of sand (Appendix A).

C. Chemicals of Concern - Soil

1. Soil Assessment

The risk-based screening levels for soil cannot be calculated at this site based on the most recent soil sampling results. On September 10, 1996, one soil boring was drilled within the most probable area of concern and completed to the water table (i.e., SB-1) (Figure 3). Split spoon soil samples were collected at five foot intervals. Each soil sample was screened in the field for organic volatiles in accordance with established SCDHEC guidelines and lithologically classified (Table 4, Appendix A). A soil sample from the depth (vadose zone) that exhibited the highest organic reading (i.e., 9-11 feet) was shipped to and analyzed by Entech Analytical Labs, Inc., (Table 4). The soil samples from SB-1 (9-11') were analyzed for BTEX constituents using EPA method 8020, PAH constituents using EPA method 8270, naphthalene using EPA method 8240, and TPH using EPA method 8015M (Appendix B). Non-detect levels were measured for all constituents analyzed in the soil samples from soil boring SB-1 (Table 5).

On September 10, 1996, a soil sample from the bottom of soil boring SB-1 (i.e., 18.5 - 21.5 feet) was sent to Southern Petroleum Laboratories, Inc., for a grain size/hydrometer test. The sand/silt and silt/clay fractions were segregated at 0.074 mm (#200 screen) and 0.0004 mm, respectively. According to the results of the grain size/ hydrometer analysis, the dry weight percentages measured of sand, silt, and clay were 41.1%, 53.8%, and 5.2%, respectively (Appendix B).

On September 10, 1996, a second soil boring (SB-2) was installed outside of the area of known soil contamination based on existing data (Expanded Assessment Plan, Froehling & Robertson, Inc., November 1993; Expanded Assessment Plan Addendum, ESCM & Associates, Inc., February 1994; Limited Assessment Report, ESCM & Associates, Inc., January 1995; and Rapid Assessment Plan, ESCM & Associates, Inc., June 1996). Split spoon soil samples were collected at five foot intervals. Each soil sample was screened in the field for organic volatiles in accordance with established SCDHEC guidelines and lithologically classified (Table 4, Appendix A). A soil sample was collected below the "A" horizon at a depth of nine to eleven feet. The soil sample was analyzed for total organic carbon (TOC) using EPD method 415.1. The laboratory result indicates 2,700 mg/kg TOC in the soil sample analyzed from soil boring SB-2 (Figure 3 and Table 5).

On September 10, 1996, soil borings were drilled during the installation of monitor wells MW-6 and MW-7 (Figure 3). Split spoon soil samples were collected at five foot intervals. Each soil sample was screened in the field for organic volatiles in accordance with established SCDHEC guidelines and lithologically classified (Appendix A). A soil sample from the depth (vadose zone) that exhibited the highest organic reading (i.e., 24-26 feet) at each boring was shipped to and analyzed by Entech Analytical Labs, Inc., (Tables 4 and 5). The soil samples from MW-6 (24-26') and MW-7 (24-26') were analyzed for BTEX constituents using EPA method 8020, PAH constituents using EPA method 8270, naphthalene using EPA method 8240, and TPH

using EPA method 8015M (Table 5 and Appendix B). Non-detect levels were measured for all constituents analyzed in the soil samples from soil borings MW-6 and MW-7 (Table 5).

2. Chemical of Concern

All constituents analyzed in all the soil samples collected at the site on September 10, 1996, measured non-detect levels (Figure 3, Table 5, and Appendix B).

FIGURE 3

D. Chemicals of Concern - Ground-Water

1. Ground-Water Assessment

Monitor wells MW-1A, MW-1, MW-2, and MW-3 were installed on-site near the source of hydrocarbons on June 16, 1993, by Froehling & Robertson, Inc., (Table 6). Monitor wells MW-4 and MW-5 were installed down-gradient of the source on June 21, 1993, by Froehling & Robertson, Inc., (Table 6). Monitor well MW-5 was installed on an off-site property adjacent to a private water well where hydrocarbons were detected by the private resident. Monitor wells MW-6 and MW-7 were installed and developed on September 9, 1996, by ESCM and Associates, Inc., (Table 6). Monitor wells MW-6 and MW-7 were positioned to delineate the lateral extent of the COC plume; the positions were determined by Mirta Carpenter of ESCM and Ms. Joanne Cooper of SCDHEC (Figure 3).

The last sampling event at this site was conducted on September 9 and 10, 1996 (Table 7, Appendix B). The ground-water samples were packed on ice in a cooler and forwarded to Entech Analytical Labs, Inc. The water samples were analyzed for MTBE and BTEX using EPA method 8020 and PAH and naphthalene using EPA method 8270 (Table 7 and Appendix B). Water samples were also collected from the unnamed stream ½ mile south of the site. Stream samples were collected near the start of the stream (i.e., up-stream) and 200 feet south of the up-stream location (i.e., down-stream). These stream samples were analyzed for the same hydrocarbon constituents analyzed in the ground-water samples.

2. Chemicals of Concern (COC)

Free-product was detected in monitor wells MW-1 and MW-1A therefore ground-water samples were not collected from these wells. The free-product thickness as measured on September 9, 1996, was 2.84 feet in monitor well MW-1A and 0.23 feet in monitor well MW-1. As depicted in Figure 3, the greatest concentration of dissolved-phase hydrocarbons was detected in monitor wells MW-4 and MW-6 which are located down-gradient of the source; the concentration of BTEX constituents in these wells exceeds the risk-based screening levels for groundwater (Figure 3 and Table 7). The benzene concentration in monitor wells MW-2, MW-5, and MW-7 exceeds the risk-based screening level for groundwater (Figure 3 and Table 7). The benzene concentration in the up-stream surface water sample exceeds the risk-based screening level for groundwater (Figure 3, Table 7, and Appendix B).

E. Aquifer Characteristics

The Bouwer and Rice method (1976) was used to analyze the slug test results. The aquifer underlying the site is unconfined and satisfies the assumptions and conditions outlined in Kruseman & de Ridder (1989) for using the Bouwer-Rice method. A computer program base on the Bouwer-Rice method was used to determine the hydraulic conductivity (AQTESOLV™, Duffield & Rumbaugh, 1989). The slug tests results were plotted on semi-log graphs to illustrate

how the hydraulic conductivity is determined (Figures 5, 6, 7 and 8). The arithmetic mean of the hydraulic conductivity at the site, based on the slug tests conducted at monitor wells MW-1A and MW-6, is 5.41 x 10^{-5} ft/min (2.75 x 10^{-5} cm/sec) (Appendix C). This value is indicative of a sandy silt lithology.

The rate at which groundwater actually moves through sediments can be calculated using the equation for seepage velocity or average linear velocity (Fetter, 1988). The average linear velocity or seepage velocity was calculated using the following equation:

$$V_x = \frac{Q}{n_e A} = - \frac{K \, \partial h}{n_e \, \partial l}$$

where

K is the hydraulic conductivity
V_x is the average linear velocity (seepage velocity)
n_e is the effective porosity

The hydraulic conductivity at the site, based on the slug tests conducted at monitor wells MW-1A and MW-6, is 5.41 x 10^{-5} ft/min. This value is indicative of a sandy silt lithology which is supported by the laboratory grain size/ hydrometer test results (Appendix B). The porosity has not been calculated for the sediments at this site, but the values generally range from 35 to 50 percent (Driscoll, 1986). The effective porosity, n_e, can be calculated, but accurate calculations of this value require determination of the weight of the sample following gravity drainage which may take periods of one year to complete. During gravity drainage the sample must be kept in an atmosphere with 100 percent relative humidity (Fetter, 1980). "Effective porosity is difficult to measure and is typically selected by intuition or experience" (Nielsen, 1991). The Georgia Environmental Protection Division suggests using values calculated for specific yield, S_y, as a substitute for effective porosity (L. Lewis, GAEPD, personal communication, February 13, 1995). An average specific yield of 0.05 was estimated from literature source (Nielsen, 1991). The seepage velocity was calculated for the unconfined aquifer using the estimated value of S_y in place of effective porosity. The hydraulic gradient calculated at the site is 0.03 based on a 10.51 feet drop in water level at the site over a distance of 350 feet (Figure 4). Using the equation above the seepage velocity at the site was calculated to be 0.047 ft/day.

F. Soil Leachability

The soil leachability model was not used since all soil hydrocarbon readings were non-detect as discussed in the soil assessment section of this report.

G. Tier 1 Evaluation

1. Site Conceptual Model

Based on the site conceptual exposure model (Tables 1 and 2), the risk-based screening levels (RBSLs) for the ground water ingestion pathway is the only pathway that needs to be considered. Refer to section II.B.2 of this report for a detailed discussion of exposure analysis and tier 1 evaluation. The risk-based screening level for benzene, toluene, ethylbenzene, and xylenes in the ground water ingestion pathway are based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories* as stated in SCDHEC's "Risk-Based Corrective Action for Petroleum Releases" (June, 1995, Table 4). The RBSLs for ground water are listed in Table 3 of this report.

2. Data Requirements

The site conceptual model was used to identify the data required to quantify the exposure of hydrocarbon constituents in the ground water ingestion pathway. The data required is discussed in sections II.E (Aquifer Characteristics) and II.I.2 (Established SSTL) of this report.

3. Calculated Exposure

The concentrations of the COC in the groundwater are above the risk-based screening levels and have impacted the closest down-gradient stream (i.e., 75 ppm benzene in the up-stream sample). Refer to section II.D.1 and 2 of this report for ground-water assessment information (Tables 3 and 7).

4. Tier 1 Action

Tier 1 action is decided based on the comparison of the risk-based screening levels for each pathway and the actual data measured during field analyses. At Crossroads Grocery only the ground water ingestion pathway needs to be considered at this time. Based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories,* the dissolved-phase hydrocarbon concentrations measured in monitor wells MW-2, MW-4, MW-5, MW-6, and MW-7 exceed the RBSLs established for ground water. The dissolved-phase hydrocarbon concentration of benzene measured in the surface water sample collected upstream in an unnamed stream southeast of the site also exceeded the RBSL establish for benzene in ground water. Based on the comparison of the risk-based screening levels for groundwater and the actual data measured during field analyses, the

preparation of a Corrective Action Plan (CAP) is warranted at this site. An important assumption in Tier 1 evaluation is that the exposure point(s) and point(s) of compliance are assumed to be located within the source area or the area containing the highest concentrations of the COC. However, since COC analyses conducted on surface water samples from a down-gradient receptor (i.e., unnamed stream-upstream samples) have indicated COC concentrations greater than the RBSL for benzene and MTBE, further Tier evaluation is warranted at this time. Furthermore, COC analyses, conducted on ground-water samples collected from a down-gradient monitor well placed adjacent to a closed-down residential drinking well, have indicated COC concentrations greater than the RBSL for benzene. During a meeting with Ms. Joanne Cooper and Mr. Read Miner of SCDHEC on January 9, 1997, Mr. Miner recommended that this residence be established as an exposure point and that the SSTLs for this site be determined. Therefore, a Tier 2 assessment/evaluation has been included in this report. However, since the COC have already migrated off the property on which the release occurred and the off-site groundwater is a current source of drinking water, an exposure point has been established at monitor well MW-4, which is located 22 feet north of the hydraulically down-gradient facility property boundary (Figure 3). This choice for an exposure point was verified during a telephone discussion between Mr. Read Miner of SCDHEC and Ms. Mirta Carpenter of ESCM on January 15, 1997.

H. Tier 2 Assessment

The information necessary for a Tier 2 evaluation has already been gathered and discussed previously in this report including site-specific hydrogeologic data, the concentrations of COC measured at exposure point(s), etc.

I. Tier 2 Evaluation

1. Exposure Point(s)

Since the COC have already migrated off the property on which the release occurred and the off-site groundwater is a current source of drinking water, an exposure point (i.e., exposure point EP-1) has been established at monitor well MW-4, which is located 22 feet north of the hydraulically down-gradient facility property boundary (Figure 3). Another monitor well cannot be installed further south of monitor well MW-4 due to dense forest vegetation.

2. Established SSTL

For the ground-water ingestion pathway, the reduction of COC in the saturated zone was estimated using empirical data as well as SOLUTE v.3.01 (Beljin and van der Heijde, 1995). SOLUTE is an analytical model used to simulate solute transport in groundwater. SOLUTE, a one-dimensional model, was used to establish the site-specific target levels (SSTL) for benzene, toluene, ethylbenzene, and xylenes for the source area COC concentrations. The nearest receptor is an unnamed stream ½ mile south of the site (i.e., 2,640 feet) (USGS Topographic Fair Play,

SC., Quadrangle; photorevised 1979) (Figure 1). The aquifer matrix is assumed homogenous and isotropic when using SOLUTE. The following one dimensional advection/dispersion equation is used to simulate the migration and concentration of hydrocarbons in the groundwater (Van Genuchten and Alves, 1982):

$$D\frac{\partial^2 C}{\partial X^2} - V_x\frac{\partial C}{\partial X} - \lambda RC = R\frac{\partial C}{\partial t}$$

Where:

D	=	Coefficient of Longitudinal Dispersion
R	=	Retardation Factor
V	=	Seepage Velocity
λ	=	First-Order Decay Term
C	=	Concentration of Solute in Aquifer

Subject to the following boundary conditions:

$$C(x,0) = C_i$$

$$\frac{\partial C}{\partial x}(\infty,t) = 0$$

$$C(0,t) = \begin{cases} C_0 & 0 < t \le t_0 \\ 0 & t > t_0 \end{cases}$$

where:

C_0	=	Constant Concentration of the Pulse at the Inlet Boundary
t_0	=	Duration of the Solute Pulse

A value of longitudinal dispersion is not input directly during the model simulation. Instead, the characteristic length of dispersivity is used by the model to calculate dispersion. A conservative value of 10 feet was input for dispersivity. The dispersivity value was chosen based

on published literature (Freeze and Cherry, 1979). An average value for the retardation factor (1.3) was chosen based on the generally accepted range measured in sediments (F. Arnold, IGWMC, 1995, personal communication). A seepage velocity of 0.047 ft/day was used based on analysis of slug tests data conducted at the site. Refer to section II.E for seepage velocity calculation. Since there is not enough historical COC concentration data available for this site at this time, the most conservative biodegradation rate or no decay has been used when modeling the site-specific target levels (SSTL) (R. Miner, SCDHEC, 1/97, personal communication).

Free product has been present at the site for approximately six years and was considered an instantaneous point source of COC to the groundwater. Because the simulations were conducted from the approximate date that the release began (1990), the initial concentration of COC in the aquifer was set at 0.0 mg/L. The duration of the source was set at 2292 days (i.e., from June 1990 to September 10, 1996) based on the time period that free product has been detected in the monitor wells at this site. On September 9, 1996, a free product recovery test was conducted by ESCM personnel at monitor well MW-1A. Monitor well MW-1A contained 2.84 feet of free product on that date. The free product recovery rate is 1.19×10^{-4} ft/sec (10.3 ft/day) (Figure 9, Appendix C).

Prior to modeling the site-specific target levels, the model was calibrated and validated using actual field data collected on September 10, 1996. At a source concentration of 22 ppm for benzene at monitor well MW-4, the model-simulated concentration at monitor well MW-5 was 0.0355 ppm compared to the actual field measured concentration of 0.044 ppm (Appendix D). At a source concentration of 44 ppm for toluene at monitor well MW-4, the model-simulated concentration at monitor well MW-5 was 0.0710 ppm compared to the actual field measured concentration of 0.011 ppm (Appendix D). At a source concentration of 4.2 ppm for ethylbenzene at monitor well MW-4, the model-simulated concentration at monitor well MW-5 was 0.0068 ppm compared to the actual field measured concentration of 0.0017 ppm (Appendix D). At a source concentration of 23 ppm for xylenes at monitor well MW-4, the model-simulated concentration at monitor well MW-5 was 0.0371 ppm compared to the actual field measured concentration of 0.027 ppm (Appendix D). Monitor well MW-5 is located 195 feet down-gradient of monitor well MW-4 along the x-axis which is parallel to the direction of ground-water flow.

The results of the modeling simulations indicate that the site-specific target levels (SSTL) in the groundwater to be met at the source should be 200 µg/L for benzene, 40,000 µg/L for toluene, 27,000 µg/L ethylbenzene, and 400,000 µg/L for xylenes (Figures 10, 11, 12, and 13; Appendix D). Since the down-gradient property boundary is located ½ mile up-gradient of the impacted unnamed stream, these SSTLs should be conservative enough to eliminate further discharge into the stream. However, since the current benzene concentration in the stream (i.e., 75 µg/L) exceeds the benzene concentration measured in the most down-gradient monitor well MW-5 (i.e., 44 µg/L), there is a possibility that a subsurface natural preferential pathway such as a fracture exists. Therefore, the stream needs to be sampled periodically to determine if the COC concentrations are being sufficiently eliminated.

3. Established Point(s) of Compliance

Monitor well MW-4 is an established point of compliance. Monitor well MW-4 is located hydraulically down-gradient of the source area and hydraulically up-gradient of the property boundary (i.e., exposure point). Monitor well MW-4 is where the dissolved-phase COC must be at or below the determined site-specific target levels (SSTLs) in the groundwater.

4. Tier 2 Action

Based on the Tier 2 evaluation, interim remedial action is warranted at this time. Free-product recovery is recommended as soon as possible. A cost proposal for enhanced free-product recovery has been submitted with this report. Free-product will be removed to the extent practicable pursuant to R.61-92, Section 280.

Aquifer Calculations and Data

SUMMARY of SLUG TEST

SOUTH CAROLINA
Department of Health and Environmental Control (DHEC)

Site Data

SITE ID: # 06742 COUNTY Oconee

FACILITY NAME Crossroads Grocery

Slug Data

See Appendix C Table _____ Figures 5, 6, 7 & 8 for a list of all data measurements.
(water level logs, etc.) (Complete as appropriate).

Water Level Recovery Data was measured by manually with water level ind.
(Hermit Data Logger, Manually with Water Level Indicator, etc.) (List Method).

Complete the following table for each well tested.
COMPETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED

Slug Test Conducted in well(s) number	(RH) MW1A	(FH) MW1A	MW6 (RH)	MW6 (FH)
Initial Rise/Drawdown in well (feet)	1.25'	0.45'	0.53'	0.15'
Radius of Well Casing (feet)	0.0833'	0.0833'	0.0833'	0.0833'
Effective Radius of Well (feet)	0.25'	0.25'	0.25'	0.25'
Static Saturated Aquifer Thickness (feet)	100'	100'	100'	100'
Length of Well Screen (feet)	15'	15'	15'	15'
Static Height of Water Column in Well (ft)	5.96'	5.96'	10.20'	10.20'

Calculations

See Appendix C ~~Table~~ Section II.E. Figure _____ for calculations. (Complete as appropriate).

The method for aquifer calculations was Bouwer-Rice (i.e. Bouwer–Rice, Cooper, etc

Calculated values by well were as follows:

Slug Test Conducted in well(s) number	MW1A (RH)	MW1A (FH)	MW6 (RH)	MW6 (FH)
Hydraulic Conductivity	0.0001117 Ft/min	1.9566×10^{-5} Ft/min	6.1173×10^{-5} Ft/min	2.3848×10^{-5} Ft/min

Thickness of the aquifer used to calculate hydraulic conductivity was 100 feet.

The aquifer is _____ confined _____ semi–confined ✓ water table (Check as appropriate).

The estimated seepage velocity is 17.1 feet per year based on a hydraulic conductivity of 5.41×10^{-5} Ft/min, a hydraulic gradient of 0.03, and a porosity of 5 per cent for sandy silt soil (list type i.e., silty sand ,clay, etc).

Note: Specific Yield used in lieu of effective Porosity (see pg. 12 of RBCA - Tier 1/2)

PROJECT = **Site-Specific Target Level for Benzene**

USER NAME = Mirta A. Carpenter

DATE = 01-22-1997

DATA FILE = b:sstlbenz.dat

INPUT DATA:

GROUNDWATER (SEEPAGE) VELOCITY = .047 [ft/d]

LONGITUDINAL DISPERSIVITY..... = 10 [ft]

RETARDATION FACTOR..... = 1.3

INITIAL CONCENTRATION..... = 0 [mg/l]

CONCENTRATION AT SOURCE..... = .2 [mg/l] SSTL for benzene

DISTANCE INCREMENT..... = 20 [ft]

NUMBER OF DISTANCE INCREMENTS. = 10

NUMBER OF TIME PERIODS..... = 1

1 TIME..... = 2292 [d]

DURATION OF SOLUTE PULSE..... = 2292 [d]

HALF-LIFE (0 if no decay)..... = 0 [d]

DECAY CONSTANT (lambda)..... = .0000D+00 [1/d]

CONCENTRATION C [mg/l]

DISTANCE [ft]	1 TIME 2292.00 [d]
0.0000	1.9792E-01
20.0000	1.9033E-01
40.0000	1.7280E-01
60.0000	1.4290E-01
80.0000	1.0392E-01
100.0000	6.4786E-02
120.0000	3.3739E-02
140.0000	1.4468E-02
160.0000	**5.0519E-03 (Monitor Well MW-4 is a Point of Compliance)**
180.0000	1.4250E-03
200.0000	3.2284E-04

At a source concentration of 200 ppb at the source (i.e., monitor well MW-1) the model-simulated concentration at the down-gradient point of compliance (i.e., monitor well MW-4) is 0.005 ppm or 5 ppb which is the risk-based screening level for benzene in ground-water. Therefore, the site-specific target level for benzene at this site based on the assumptions stated above and in the report is 200 ppb.

COMMODITY: To perform corrective action of a petroleum release from regulated underground storage tank site at site number 06742, Crossroads Grocery, 850 West Oak Highway, Oconee County, South Carolina.

METHOD OF BID AWARD: Award will be made by total to the lowest responsive and responsible bidder.

75 tech

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-6672-07/29/99-REB

PURPOSE and SCOPE OF WORK

The Division of Underground Storage Tank (UST) Management of the South Carolina Department of Health and Environmental Control (DHEC) is seeking services to perform corrective action of a petroleum release from a regulated underground storage tank site in accordance with defined remediation goals. The objective is to remove free product and reduce the levels of chemicals of concern (CoC) in the ground-water to or below defined site specific target levels (SSTLs). All bidders must be South Carolina Certified Class I Site Rehabilitation Contractors. The scope of work defined in this bid invitation is to be implemented at **Crossroads Grocery (UST Permit #06742), 850 West Oak Highway, Oconee County, South Carolina,** for the release reported on January 11, 1993.

SPECIAL CONDITIONS

1. CONTRACT PERIOD: The contract will be effective from date of award until the corrective action is complete as described in this contract.

2. This contract is for corrective action at only one (1) site in South Carolina. Compensation from the SUPERB Account is not considered a state contract for purposes of procurement or subject to state bid requirements in accordance with Section 44-2-130(D) of the SUPERB Act.

3. AWARD: Award will be made to a South Carolina Certified UST Site Rehabilitation Contractor based on the total cost of corrective action to SSTLs and removal or abandonment of assessment and rehabilitation items. The proposed implementation schedule to achieve the remediation goals, the removal of all equipment and abandonment of wells, (including pre-existing wells), trenches, etc. installed by the contractor, and the proposed remediation technology(ies) or method(s) must protect public health and the environment and be eligible for permitting by DHEC. The total cost, methods, and estimated time to complete the contract must also be advantageous to the State of South Carolina.

4. REASONABLE BID: DHEC reserves the right to reject any and all bids that appear to be above the customary and reasonable cost for the same scope of work in a similar geologic setting.

5. Contractor must agree to make positive efforts to use women and minority owned businesses and individuals.

6. AMENDMENTS: All amendments to this solicitation will be in writing from the DHEC Procurement Officer indicated on page one of this solicitation. DHEC will not be legally bound by any amendment or interpretation that is not in writing.

7. QUESTIONS: Questions or requests for information must be submitted in writing and received by 5:00 P.M., July 8, 1999. After this date, no further questions will be addressed. A written response will be mailed to all requestors of the bid package. The questions may be faxed to Releata Baker, fax number (803) 898-3505.

8. **NOTE... THE ONLY OFFICIAL CONTACT PERSON AT DHEC DURING THE BIDDING AND**

AWARDING PROCESS IS THE PROCUREMENT OFFICER INDICATED ON PAGE ONE OF THIS SOLICITATION. BIDDING CONTRACTORS ARE NOT TO CONTACT DHEC PERSONNEL LOCATED OUTSIDE THE BUREAU OF BUSINESS MANAGEMENT.

9. **The contractor will be required to treat the area of concern (see figure #2) such that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point. Verification that interim corrective action goals have been met will be based upon ground-water quality samples collected from monitoring wells MW- 1, MW-1A, MW-2, MW-4, MW-6, MW-7, MW-8, MW-11, MW-13, and MW-14. Verification that final corrective goals have been met will be based upon ground-water quality samples collected from all existing monitoring wells, and additional verification wells to be installed at locations designated by DHEC (see specification #10 for more detail).**

10. REPORTS: Deliver the reports to: SCDHEC, Division of UST Management, ATTN: **Read Miner**, 2600 Bull Street, Columbia, SC 29201. A minimum of two (2) copies of each plan and two (2) copies of each report must be delivered to the above address. Based on permitting and other requirements, engineering report, UIC permits, air modeling forms or NPDES Permits may be required. Please contact the Department for the exact number of copies of each document to be submitted.

11. INVOICING: Invoices will be submitted to: SCDHEC, Division of UST Management, ATTN: Financial Section, 2600 Bull Street, Columbia, SC 29201, using the Department's Corrective Action (CA) Bid Invoice form. The initial invoice must be received at the above address within four months or funds will be uncommitted as required by the Section 44-2-40(B) of the SUPERB Act. If funds are uncommitted this invoice will be held until funding is available. Payment to the contractor will be a pay for performance system as follows:

    A. Payment of forty percent (40%) of the total bid price will be made within 90 days of operation of the remediation system or implementation of corrective action as described in the approved corrective action plan (CAP), subject to the limitations of Section 44-2-40 of the SUPERB Act. This will be documented in the initial monitoring report.

    B. Payment of thirty-five percent (35%) of the total bid price will be made based on removal of free product to .01 foot as verified in monitoring wells MW-1, MW-4, MW-6, and MW-8 and achieving interim CoC mass reduction goals at the site as verified in monitoring wells MW- 1, MW-1A, MW-2, MW-4, MW-6, MW-7, MW-8, MW-11, MW-13, and MW-14. Payment will be made for interim goals of 25, 50, and 75 percent reduction of <u>total</u> CoC mass by the implementation of corrective action. **NOTE: Payment cannot be based on laboratory analyses for any well that has been used for injection unless that well has returned to ambient conditions.** The CoC mass requiring reduction is as follows:

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-6672-07/29/99-REB

CoC mass in parts per billion (µg/l) based on January 25, 1999, sampling: (CoC may increase or decrease in the future)

Well	Benzene	Toluene	Ethylbenzene	Xylenes	MTBE	Naphthalene	Total Mass
MW- 1	28,200	37,200	2,750	19,500	24,600	4,750	117,000
MW- 1A	33,700	39,300	1,700	13,500	193,000	<5000	286,200
MW- 2	19	12	<5	21	67	5	129
MW- 4*	226,000	301,000	280,000	278,000	5,110,000	2,000	6,197,000
MW- 6	6,920	9,600	1,080	7,460	1,810	495	27,365
MW- 7	2,200	9,360	1,280	7,440	110	430	20,820
MW- 8**	226,000	301,000	280,000	278,000	5,110,000	2,000	6,197,000
MW- 11	24	106	189	825	<10	731	1,885
MW- 13	1,810	26	38	382	2,810	154	5,220
MW- 14	17	21	50	334	7	452	881
Initial Mass*	524,890	697,625	567,092	605,462	10,442,414	16,017	12,853,500
SSTL Mass	678	100,392	32,951	418,839	3,044	3,483	559,387
Initial Mass above SSTL	524,212	597,233	534,141	186,623	10,439,370	12,534	12,294,113

* CoC mass may change due to seasonal fluctuations in the groundwater

**Contains free phase product (MW-4 - 0.05 feet, MW- 8 - 2.49 feet), initial mass based on Henry's Law solubility limits.

(1) 25 percent total mass reduction will be achieved when free product has been removed to .01 foot from MW-1, MW-4, MW-6, and MW-8, and one-quarter of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells MW- 1, MW-1A, MW-2, MW-4, MW-6, MW-7, MW-8, MW-11, MW-13, and MW-14 is removed as compared to the SSTLs. The following formula will be used to calculate the percent total mass reduction: total mass above SSTLs from initial sampling less total mass above SSTLs from subsequent sampling divided by total mass above SSTLs from initial sampling. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-quarter of the total CoC mass above SSTLs is removed.

(2) 50 percent total mass reduction will be achieved when one-half of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells MW- 1, MW-1A, MW-2, MW-4, MW-6, MW-7, MW-8, MW-11, MW-13, and MW-14 is removed as compared to the SSTLs. The formula outlined in item 11. B. (1) will be used. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-half of the total CoC mass above SSTLs is removed.

(3) 75 percent total mass reduction will be achieved when three-quarters of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells MW- 1, MW-1A, MW-2, MW-4, MW-6, MW-7, MW-8, MW-11, MW-13, and MW-14 is removed as compared to the SSTLs. The formula outlined in item 11 B (1) will be used. Payment of 15 percent (15%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least three-quarters of the total CoC mass above SSTLs is removed.

C. **The final 25 percent (25%) of the total bid price will be paid upon: 1) verification that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point in the area of concern (see figure #2). Verification that the SSTLs have been met will be based upon ground-water quality samples collected from all existing monitoring wells, and additional verification wells to be installed at locations designated by DHEC (see specification #10 for more detail); and 2) all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.) are removed from the site or properly abandoned.** The SSTLs are as follows:

Site specific target levels (SSTLs) in parts per billion (µg/l)

Well	Benzene	Toluene	Ethylbenzene	Xylenes	MTBE	Naphthalene
MW- 1	111	22,164	2,750*	19,500*	887	554
MW- 1A	111	22,164	1,700*	13,500*	187	554
MW- 2	19*	12*	<5**	21*	67*	5*
MW- 4	74	14,775	10,344	147,734	592	369
MW- 6	97	9,600*	1,080*	7,460*	163	482
MW- 7	111	9,360*	1,280*	7,440*	110*	430*
MW- 8	111	22,164	15,515	221,643	887	554
MW- 11	24*	106*	189*	825*	<10**	369
MW- 13	10	26*	38*	382*	134	83

MW- 14	10	21*	50*	334*	7*	83
Total	678	100,392	32,951	418,839	3,044	3,483

* Laboratory analysis is less than calculated SSTLs; therefore, SSTL mass is set equal to laboratory mass.

** Laboratory analysis is below detection limits; therefore, SSTL mass is set equal to detection limits.

12. NOTIFICATION FOR FAILURE TO PERFORM: If the contractor fails to meet any specification of corrective action as outlined in this document, DHEC will notify the contractor by certified letter of the deficiency(ies). If the contractor does not correct the deficiency(ies) within 30 days, the contractor will be in breach of contract and the bid award may be voided by DHEC. DHEC will notify the contractor by certified letter that the bid award is void and any invoices are payable upon review and approval of DHEC. If the contractor corrects the deficiency(ies) within 30 days, the bid award will continue. Please note contractor-owned items used on-site for the contract that are destroyed by acts of nature, improper maintenance or handling, theft or vandalism will not be replaced or reimbursed by the SUPERB fund. The accepted bid will be final and will not be increased or cancelled for any reason (e.g., unanticipated iron fouling of a system, wells clogging because of biological activity or sediments, increased subcontractor costs, loss of utilities, modification to the system to meet the remediation goals, etc.) with the exception of unforeseen geologic circumstances or identification of additional CoC from another release.

13. SITE SPECIFIC DETAILS: A brief technical summary of the release, including a location map and specifics of existing wells, is attached. The detailed technical file will be available for review through the Freedom of Information (FOI) Office located on the third floor of the Sims Building, 2600 Bull Street, Columbia, SC. Appointments to view the technical file may be scheduled on weekdays between the hours of 8:30 A.M. to 5:00 P.M. by calling the SCDHEC Freedom of Information Office at (803) 898-3882. Please request file # 06742.

14. **The contractor will submit a CAP within 30 days of Statement of Award notification from the Bureau of Business Management in accordance with Specification item 2.** The implementation of the CAP will be initiated immediately upon Departmental approval of the CAP and all associated permit(s), and in accordance with the schedule presented in the bid. A performance, bond equal to the award price, will be required by DHEC. The original performance bond will be submitted to the Division of UST Management,Attn: Chris Doll, within 30 days of award. The performance bond will specify that the SUPERB Account will be the recipient of any forfeiture.

15. **MINIMUM REQUIREMENTS: Corrective action will be considered complete once the levels of CoC in the area of concern (see figure #2) are verified to be at or below the SSTLs listed in item 11.C., and removal or abandonment of all remediation and assessment items installed by the contractor (e.g., wells [including preexisting wells], trenches, etc.). See Specification #10 for the method of verification.** All rehabilitation activities associated with a UST release must be performed by a SCDHEC certified Class I site rehabilitation contractor as required by R. 61-98. All corrective action plans and reports must be sealed by a Professional Engineer or Professional Geologist registered in the State of South Carolina. All engineering reports, drawings and plans must be sealed by a Professional Engineer registered in the State of South Carolina. All laboratory analysis for CoC must be performed by a SC certified laboratory. All

monitoring, verification, injection, or recovery wells must be installed and abandoned by a SC certified well driller. All applicable certification, training, permits, applications, and fees associated with: well installation; injection, discharge, treatment, or transportation of ground water, air, or soil; construction or operation of a remediation system; and any other action requiring a permit are the responsibility of the contractor. Any required business or occupation license and occupational safety and health training (e.g., OSHA) as defined by the laws and regulations of the United States of America, State of South Carolina, county or city is also the responsibility of the contractor. The terms and conditions of all applicable permits will be met. Any contaminated ground water, soil, or construction material must be properly transported and disposed of, or treated at an approved facility with prior approval from DHEC. Any costs for utilities construction and service (electric, telephone, sewer, etc.) required by the corrective action are the responsibility of the contractor.

SPECIFICATIONS for CORRECTIVE ACTION

The successful contractor must meet the following specifications as required by the proposed treatment method(s) or corrective action technology(ies):

1. Submit a CAP bid proposal. The proposal will outline in general terms an approach to achieve the remediation goals (e.g., reduction of each CoC to SSTL). The proposal must outline the following:

   A. A description of the proposed treatment method(s) or technology(ies) for corrective action.

   B. The total cost (in thousands of dollars) to complete site rehabilitation to meet the remediation goals and to remove or abandon all assessment and remediation items installed as part of corrective action.

   C. The estimated amount of time in months to complete site rehabilitation to meet the remediation goals, install verification wells, and remove or abandon all assessment and remediation items installed as part of corrective action.

2. Complete and submit a detailed CAP (three copies) for the release at Crossroads Grocery, 850 West Oak Highway, Oconee County, South Carolina. **within 30 days of Statement of Award notification by the Bureau of Business Management. NOTE:** ***Use of monitoring well(s) for injection purposes is not allowed.*** A condition of the plan may include installation of additional recovery, sparge, compliance, or injection wells. The plan must define all active (pump and treat, sparge, vapor extraction, excavation of impacted soils, bioremediation, etc.) and passive (intrinsic remediation, monitoring, etc.) corrective action method(s) proposed to reduce CoC to SSTLs. It must be shown, by use of scientific models, computations, or discussion, how each CoC will be reduced to the SSTL for each remediation method proposed for the release. Any assumptions used in a model will be listed or shown, as well as, appropriate references. Intrinsic corrective action will require monitoring to verify remediation. General construction details will be included (e.g., install four additional recovery wells, construct a compliance point, install four air injection wells, excavate 3,000 cubic yards of impacted soils, etc.) as well as details of well abandonment and equipment removal. A remediation time table including abandonment of wells and removal of

equipment will be included with the CAP. The Division of UST Management will review the CAP and initiate a public notice period for a maximum of 30 days. The contractor must obtain a copy of the applicable portion of the tax map. This map will depict the location of the facility, and all impacted properties, and all properties located adjacent to the impacted properties. The names and addresses of the owners of each of these properties will be provided. The contractor may be required to attend or provide input at a public meeting upon request by DHEC. Any CAP amendments and modifications arising from public notice must be submitted within 15 days of notification by DHEC. The CAP and any amendments or modifications must be sealed by a qualified Professional Engineer or Geologist registered in the State of South Carolina. The owner/operator, Neil Alexander, will be consulted and will approve the location of the corrective action system. If permanent, the system must be enclosed in a fenced area or small building. **The use of above-ground piping is not allowed without prior consent of the property owner.** The initial invoice must be received at the above address within four months or funds will be uncommitted as required by the SUPERB Act. If funds are uncommitted this invoice will be held until funding is available.

3. Complete and submit all applications for permits (injection, NPDES, BAQC modeling form, thermal treatment, construction, etc.; 3 copies) and an engineering report (ER; 4 copies) with the CAP. Any required permit changes or corrections will be submitted within 15 days of notification by DHEC. The ER and any ER amendments and modifications, must be sealed by a Professional Engineer registered in the State of South Carolina. After review of the CAP and all permit applications by DHEC, the Division of UST Management will issue a notice to proceed with CAP implementation.

   Implementation of the corrective action plan before the completion of the public notice process and approval of all permits by DHEC is not authorized. If premature implementation occurs, the Department will not reimburse those costs from the SUPERB Account, and the bid award will be reduced by that amount. If the Department agrees with early implementation to better protect human health in an emergency and provides approval in writing, early implementation without any reduction to the bid amount will be authorized.

4. Implement the CAP within 30 days of receipt of notice to proceed and any required permit to construct. Disruption to the owner/operator's normal business will be kept to a minimum. Upon completion of any required construction, DHEC will inspect the system and issue a permit to operate.

5. Gain access to the adjacent property to sample monitoring wells and to install any corrective action equipment, as required.

6. Initiate system startup within 15 days of receipt of the permit to operate. Remediation as defined in the CAP and ER will begin upon system startup. An initial monitoring report documenting CoC concentrations in all wells and potentiometric conditions prior to start up (including verification of system operation or CAP implementation) must be submitted to the Division of UST Management. If any problem with CAP implementation occurs, the contractor will contact the UST project manager within 24 hours of problem identification and will submit written documentation within five days of notification.

   Based on naturally occurring conditions, the concentration of petroleum chemicals of concern (CoC) will increase or decrease. The CoC for the wells included in the bid package may increase or decrease, DHEC

will pay for mass reduction based on this sampling event with no increase in bid price. If the concentration in two or more wells increases more than 500 percent based on the initial or base line sampling or free product is detected, the contractor may request in writing that the award be canceled. The contractor will be reimbursed for one personnel mobilization to collect samples, a sample collection and analytical fee each monitoring well sampled as outlined in SUPERB Allowable Costs, plus $6,000 for all other costs incurred e.g., CAP preparation, obtaining performance bond, business license. The contract will be canceled and the performance bond will be returned to the company. If the corrective action system is started or treatment is performed, the contractor will be required to complete the contract unless geological conditions change or another release is confirmed. See special condition 12. If the contract is canceled for some reason by DHEC, the contractor will be notified by certified letter and an invoice for the above outlined items may be submitted for reimbursement from the SUPERB Account.

7. Complete and submit a corrective action monitoring report (3 copies plus one copy for any DHEC Bureau that issued a permit) on a quarterly basis. The corrective action monitoring reports must include:

A. A narrative portion that documents current site conditions and system effectiveness in achieving the remediation goals (e.g., free product removal, reducing CoC to the SSTLs) as outlined in the CAP. Any system down time and the associated reason(s) will be included in the report.

B. Conclusions and recommendations based on the reported data.

C. Ground-water laboratory analytical data for all monitoring wells in the following format (additional parameters such as dissolved oxygen may be required; do not sample wells containing free product):

Analytical Data (µg/l)

Monitoring Well	Date	Benzene	Toluene	Ethylbenzene	Xylenes	MTBE	Naphthalene
MW-1	7/15/97 10/15/97	145 140	200 190	146 140	1,000 900	170 50	47 165
MW-2	7/15/97 10/15/97	580 480	800 690	300 257	1,000 912	60 50	20 19

D. Ground-water potentiometric data for all monitoring wells in the following format:

Ground-water Data (feet)

Monitoring Well	Date	TOC Elevation	TOC to GW	TOC to FP	FP Thickness	GW Elevation
MW-1	7/15/97 10/15/97	98.0 98.0	17.54 17.90			80.46 80.10
MW-2	7/15/97 10/15/97	100.0 100.0	20.50 21.50	20.47 21.48	0.03 0.02	79.50 78.50

E. A ground-water elevation contour map of the site based on current ground-water potentiometric data.

F. A CoC map based upon current ground-water laboratory analytical data. The ground-water data should be adjacent to the relevant monitoring well using the following format (additional parameters such as dissolved oxygen may be required):

MW - Number
Benzene (µg/l)
Toluene (µg/l)
Ethylbenzene (µg/l)
Xylenes (µg/l)
MTBE (µg/l)
Naphthalene (µg/l)

G. A copy of the DHEC approval letter and manifests for any contaminated soil and ground-water removed from the site for treatment and/or disposal.

H. Additional data required by permits (e.g., air analyses, wastewater effluent analyses and amounts, etc.). The data should be reported on a form or in a format specified in the permits, and attached to the monitoring report as an addendum.

All rehabilitation activities associated with the UST release must be performed by a SCDHEC Certified Site Rehabilitation Contractor. All air, soil, and ground-water analyses must be performed by a South Carolina certified laboratory. The corrective action monitoring report must be sealed by a Professional Engineer or Geologist registered in the State of South Carolina. All monitoring wells associated with the release will be sampled on a quarterly basis for the first year. Thereafter, the number of wells sampled may be reduced and/or the interval between corrective action monitoring reports may be lengthened upon clear demonstration of CoC reduction, unless restricted by permit requirements. DHEC may require data to be reported on a form or in a specific format. The contractor will be provided with the proper report forms and format prior to system startup. The contractor will be notified of any revisions to the report forms or format 90 days prior to the due date for the corrective action monitoring report.

8. Collect one (1) ground-water sample per monitoring event for all monitoring wells associated with the release. Each well should be purged prior to sampling. Purging is considered complete once the ground-water temperature and pH have stabilized. Sampling logs should note all temperature and pH measurements, as well as the location and type of each sample submitted for laboratory analysis. Each ground-water sample will be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples must be analyzed for the following parameters:

Analyte	Analytical Method*	Reporting Limit (µg/l)
BTEX	8260B/5030B	5
Naphthalene	8260B/5030B	5
MTBE	8260B/5030B	5

*or EPA equivalent method that can achieve the same reporting level

Additional samples (air, groundwater, effluent, soil) required by permits must be collected in accordance with established QA/QC protocol and submitted to a certified laboratory for analysis. The samples will be analyzed for parameters stipulated in the permits. Sampling and analytical data for each sample (e.g., field sampling logs, chain of custody forms, certificates of analysis, and the lab certification number) will be included in the corrective action monitoring report.

9. Properly dispose of all contaminated soil and ground water generated during the implementation of the CAP and installation of verification wells. DHEC must approve the disposal facility selected for treatment and disposal of the free product and contaminated soil and ground water. The owner/operator of the facility is considered the generator for any contaminated soil and ground water. The contractor must document all disposal of free product and contaminated soil and ground water in the corrective action monitoring report.

10. Verification for the removal of free product will be conducted by SCDHEC personnel with an interface probe. If the remediation technology is in-situ (e.g., pump and treat, air sparging, vapor extraction): suspend operation of the system once the remediation goals for all CoC have been maintained for a period of 30 days. Samples are to be taken after one (1) quarter or after all CoC levels have reached equilibrium and again after a second quarter. Along with the parameters listed in Specification #8, the ground-water samples should also be sampled for the following parameters:

Analyte	Analytical Method*	Reporting Limit (µg/l)
Dissolved Oxygen	SM4500-O G	500
Ferrous Iron	SM3500-Fe D	30
Nitrate	9056/9210	100
Sulfate	9038/9056	1000

*or EPA equivalent method that can achieve the same reporting level

If sample results indicate that the remediation goals are not sustained, the contractor must submit a corrective action status report (3 copies) that outlines the deficiency(ies) and offers recommendations for achieving the remediation goals with a revised timetable. Modifying and restarting of the system will be directed by DHEC. The system will operate until all remediation goals are again maintained for a period of 30 days. Operation of the system will then be suspended again and samples taken to verify that remediation

goals are sustained. This cycle of activity, including status reports, will be repeated until all CoC levels remain below SSTLs for all wells listed in Special Conditions item 11 C for two (2) consecutive quarters. Three verification wells may then be installed at locations designated by DHEC. Costs for verification well installation are considered part of this bid price. Each well will be sampled in accordance with Specifications item 8. and the analyses compared to the calculated SSTLs for the CoC at that well location. If the laboratory analyses are at or below the SSTLs, corrective action will be considered complete. If any analysis is above the SSTL, the corrective action will not be considered complete, and the activity cycle described above must be repeated until all CoC levels remain below SSTLs for those wells listed in Special Conditions item 11 C. Split or duplicate samples may be collected **by DHEC (or its subcontractors)** to verify achievement of remediation goals. **At least two weeks notice will be provided to DHEC prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

or

If the remediation technology is a single event (e. g. excavation of impacted soils, vacuum enhanced recovery): collect sufficient samples as outlined in the CAP to verify the reduction of CoC to the remediation goals. The contractor may be required to install and sample three verification wells at locations designated by DHEC. If the levels of CoC in all samples are at or below SSTLs, corrective action will be considered complete. If the level of any CoC is above the SSTL, additional corrective action will be required. The contractor will submit one (1) corrective action status report to document the reduction of CoC to the remediation goals. Split or duplicate samples will be collected **by DHEC (or its subcontractors)** to verify achievement of remediation goals. **At least two weeks notice will be provided to DHEC prior to mobilizing to the site for sampling to verify attainment of remediation goals.** Costs for transportation and analysis of split or duplicate samples will be paid by DHEC.

11. Disassemble and remove the remediation system and all associated remediation items including utilities from the site within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. Disruption to the owner/operator's normal business will be kept to a minimum.

12. Properly abandon all wells (including preexisting wells), borings, trenches, and piping/utility runs installed by the contractor as part of corrective action within 60 days of notification by DHEC that the remediation goal for the release associated with the UST(s) at the site has been achieved. The abandonment will be in accordance with South Carolina Well Standards and Regulations R. 61-71 and accepted industry standards for abandonment of trenches and piping/utility runs. Disruption to the property owner's normal business will be kept to a minimum. The contractor must notify DHEC of the method of well abandonment and final disposal of any free product and contaminated soil or ground water. The contractor will return the site to the condition prior to corrective action (e.g., asphalt paved areas will be repaved with asphalt, concrete areas will be replaced with concrete, grass areas will have soil replaced to the original grade and reseeded or sodded with grass, etc.).

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-6672-07/29/99-REB

BIDDING SCHEDULE

The total cost in dollars to treat the area of concern (see figure #2) such that the thickness of free product does not exceed .01 foot and the levels of CoC do not exceed the site-specific target levels (SSTLs) defined in item 11.C. at any point, complete all associated monitoring and post-remediation verification, prepare all plans, reports, and correspondence; obtain and meet all terms and conditions of all required permits and licenses; design, install, monitor, operate, maintain, and when completed, properly abandon or remove all assessment and remediation items installed as part of corrective action; provide evidence of performance bond; and other items outlined in this bid invitation for the Crossroads Grocery, (UST Permit # 06742), 850 West Oak Highway, Oconee County, South Carolina is: $ _____

OTHER CRITERIA

Please respond to the following questions which have been designed to verify your corrective action qualifications:

1. The corrective action method(s) or technology (ies) that will be proposed in the CAP will be (list all active and/or intrinsic methods or technologies for remediation of the aquifer; attach additional pages(s) as required):

   _____

   _____

   _____

   _____

   _____

2. The estimated time in months to complete the corrective action from the date of bid award, corrective action goals are met, and all corrective action items are removed from the site or properly abandoned is approximately _____ months. This time assumes all submitted plans and reports will be reviewed by DHEC within 30 days of receipt.

3. When can you begin work (earliest date that a CAP, ER and all permit applications would be submitted after notification of Statement of Award from the Bureau of Business Management)? _____

BID ACCEPTANCE and DELIVERY STATEMENT

In compliance with the bid solicitation and subject to all conditions thereof, the contractor offers and agrees, if this bid is accepted within _____ days from date of bid opening, to furnish any or all items/services quoted at the prices set forth.

LEGEND

- Property boundaries as reprinted from Oconee County Assessor's Office, Oconee County, SC, Taxmap #301
- Closest down-gradient stream(s)
- 4 — Block number as reprinted from Oconee County Tax Assessor's Office, Oconee County, SC, Taxmap #301
- 40 — Parcel number as reprinted from Oconee County Tax Assessor's Office, Oconee County, SC, Taxmap #301
- 12 — File plan lot number as reprinted from Oconee County Tax Assessor's Office, Oconee County, SC, Taxmap #301
- This road does not actually exist nor has it ever existed according to local residents and based on site visual survey conducted on 8/22/97. However, a dirt road does exist on the southwest side of lot 40 as shown.

____ ft. after ____ hrs. pumping ____ G.P.M.
Pumping Test: ☐ Yes (Please enclose) ☒ No
Yield ____

12. WATER QUALITY
Chemical Analysis ☒ Yes ☐ No Bacterial Analysis ☐ Yes ☒ No
Please Enclose Lab Results.

13. ARTIFICIAL FILTER (Gravel Pack) ☒ Yes ☐ No
Installed from 9 ft. to 20 ft.
Effective size Filter Sand uniformity coefficient ____

14. WELL GROUTED? ☒ Yes ☐ No Bentonite 8-9'
Neat Cement ☒ Sand Cement ☐ Concrete ☐ Other ☐ ____
Depth From 0 ft. to 8 ft.

15. NEAREST SOURCE OF POSSIBLE CONTAMINATION: ____ Feet ____ Direction
Former UST location Type Well disinfected upon completion ☐ Yes ☐ No Type ____ Amount ____

16. PUMP: Date Installed ____ not installed ☒
Mfr. name ____ model no. ____
H.P. ____ volts ____ length of drop pipe ____ ft. capacity ____ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

17. WATER WELL CONTRACTOR'S CERTIFICATION: This well was drilled under my direction and this report is true to the best of my knowledge and belief.

SUMMARY of SLUG TEST

SOUTH CAROLINA
Department of Health and Environmental Control (DHEC)

Site Data

SITE ID: # 06742 COUNTY Oconee

FACILITY NAME Crossroads Grocery

Slug Data

See Appendix C Table _____ Figures 5,6,7 & 8 for a list of all data measurements.
(water level logs, etc.) (Complete as appropriate).

Water Level Recovery Data was measured by manually with water level ind.
(Hermit Data Logger, Manually with Water Level Indicator, etc.) (List Method).

Complete the following table for each well tested.
COMPETE A SECOND SHEET IF MORE THAN FOUR WELLS ARE TESTED

Slug Test Conducted in well(s) number	(RH) MW1A	(FH) MW1A	MW6 (RH)	MW6 (FH)
Initial Rise/Drawdown in well (feet)	1.25'	0.45'	0.53'	0.15'
Radius of Well Casing (feet)	0.0833'	0.0833'	0.0833'	0.0833'
Effective Radius of Well (feet)	0.25'	0.25'	0.25'	0.25'
Static Saturated Aquifer Thickness (feet)	100'	100'	100'	100'
Length of Well Screen (feet)	15'	15'	15'	15'
Static Height of Water Column in Well (ft)	5.96'	5.96'	10.20'	10.20'

Calculations

See Appendix C ~~Table~~ Section II.E. Figure _____ for calculations. (Complete as appropriate).

The method for aquifer calculations was Bouwer-Rice (i.e. Bouwer–Rice, Cooper, etc

Calculated values by well were as follows:

Slug Test Conducted in well(s) number	MW1A (RH)	MW1A (FH)	MW6 (RH)	MW6(FH)
Hydraulic Conductivity	0.0001117 Ft/min	1.9566×10^{-5} Ft/min	6.1173×10^{-5} Ft/min	2.3348×10^{-5} Ft/min

Thickness of the aquifer used to calculate hydraulic conductivity was 100 feet.
The aquifer is _____ confined _____ semi–confined ✓ water table (Check as appropriate).

The estimated seepage velocity is 17.1 feet per year based on
a hydraulic conductivity of 5.41×10^{-5} Ft/min, a hydraulic gradient of 0.03, and
a porosity of 5 per cent for sandy silt soil (list type i.e., silty sand ,clay, etc).
Note: Specific Yield used in lieu of effective Porosity (see pg. 12 of RBCA - Tier 1/2)

SUMMARY of SLUG TEST

SLUG TEST DATA FOR MW1A (RISING HEAD)

Client:	Mr. Neil Alexander
Address:	Crossroads Grocery
	Route 2, Box 149
	Westminster, SC 29693
Date:	December 8, 1993
Operator:	Mirta A. Carpenter
Assistant(s):	Jewell Shaw

Initial Drawdown:	1.25	feet
Radius of Well Casing:	0.0833	feet
Radius of Well:	0.25	feet
Saturated Thickness:	100	feet
Screen Thickness:	15	feet
Static Height of Water:	5.96	feet

Page No. 1

Time (minutes)	Drawdown (feet)
0.08	1.17
0.15	1.16

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

BID NUMBER: SB-6672-07/29/99-REB

PLEASE READ THE FOLLOWING CAREFULLY PRIOR TO COMPLETING BID

INSTRUCTIONS TO BIDDERS

DISCUSSIONS AND NEGOTIATIONS: By submission of a bid, bidder agrees that during the period following issuance of this solicitation and prior to notification of intent or award of a contract, the bidder shall not discuss this procurement with any party except members of the DHEC Procurement Division or other parties designated in this solicitation. Bidder shall not discuss or attempt to negotiate with the using area or program any aspects of the procurement without prior approval of the DHEC Procurement Division Buyer responsible for the procurement. Infractions may result in rejection of the violator's bid.

1. Unless otherwise required herein, only one signed copy of the invitation to bid is required.
2. Bids "faxed" directly to the DHEC Procurement Office will not be accepted or considered for award.
3. Bids, amendments thereto or withdrawal request must be received by the time advertised for bid opening. It is the bidder's sole responsibility to insure that these documents are received by the person (or office) at the time indicated in this solicitation document. Any withdrawal request received after the time of the bid opening shall be governed by DHEC Underground Storage Tank Environmental Remediation Procedures.
4. When specifications or descriptive papers are submitted with the bid submission, enter bidder's name thereon.
5. Submit your signed bid on this form. Show the bid number on the envelope as instructed. DHEC assumes no responsibility for unmarked or improperly marked envelopes. All envelopes received showing a bid number are placed directly under locked security until the date and time of opening. Do not include more than one bid invitation per envelope. If directing any other correspondence, address the envelope to the Procurement Officer but do not include the bid number on the envelope since it does not include your bid.
6. Bidders must clearly mark as "CONFIDENTIAL" each part of their bid which they consider to be proprietary information that could be **exempt from disclosure** under Section 30-4-40, Code of Laws of South Carolina 1976 (1986 Cum. Supp.; Freedom of Information Act). If any part is designated as confidential, there must be attached to that part an explanation of how this information fits within one or more categories listed in Section 30-4-40. DHEC reserves the right to determine whether this information should be exempt from disclosure and no legal action may be brought against the State, DHEC or its agents for its determination in this regard.
7. By submission of a bid, **you are guaranteeing** that all goods and services meet the requirements of this solicitation during the contract period.
8. **Tie bids** will be resolved as outlined in DHEC Underground Storage Tank Environmental Remediation Procedures.
9. **Do not include any taxes** that DHEC may be required to pay in the bid price. Upon submission of a bid by a state agency, the Procurement Officer will compute a 5% sales and use tax to the non-state agency bids when applicable (service and labor excluded) in determining the low bidder. This procedure conforms with the SC Tax Commission Sales and Use Tax Regulation 117-174-.95.
10. **Correction of errors on this bid form:** All prices and notations should be printed in ink or typewritten. Errors should be crossed out, corrections entered and initialed by the person signing the bid. Erasures or use of typewriter correction fluid may be cause for rejection. No bid shall be altered or amended after the time specified for the bid opening.
11. **Ambiguous bids** which are uncertain as to terms, delivery, quantity or compliance with this solicitation may be rejected or otherwise disregarded.
12. Any bidder desiring to exercise a grievance may do so under section IV of DHEC Underground Storage Tank Environmental Remediation Procedures. All correspondence should be directed to the Director of Procurement Services, Bureau of Business Management, 2600 Bull Street, Columbia, SC 29201.
13. **Failure to respond** to three consecutive bid notices may result in removal of bidder's name from the mailing list.

GENERAL PROVISIONS

14. DHEC reserves the right to reject any and all bids, and to cancel this solicitation.
15. **Unit prices** will govern over extended prices unless otherwise stated in this solicitation.
16. **Prohibition of Gratuities:** Amended section 8-13-420 of the 1976 Code of Laws of South Carolina States: "Whoever gives or offers to any public official or public employee any compensation, including a promise of future employment, to influence his action, vote, opinion or judgement as a public official or public employee or such public official solicits or accepts such compensation to influence his action, vote, opinion or judgement shall be subject to the punishment as provided by Section 16-9-210 and Section 16-9-220. The provisions of this section shall not apply to political contributions unless such contributions are conditioned upon the performance of specific actions of the person accepting such contribution nor shall they prohibit a parent, grand-parent or relative from making a gift to a child, grandchild, or other close relative for love and affection except as hereafter provided".
17. **Bidder's Qualification:** Bidders must, upon request of DHEC, furnish satisfactory evidence of their ability to furnish products or services in accordance with the terms and conditions of these specifications. DHEC reserves the right to make the final determination as to the bidder's ability to provide the products or services requested herein.
18. **Bidder's Responsibility:** Each bidder shall fully acquaint himself with conditions relating to the scope and restrictions attending the execution of

the work under the conditions of this solicitation. It is expected that this will sometimes require on-site observation. The failure or omission of a bidder to acquaint himself with existing conditions shall in no way relieve him of any obligation with respect to this bid or to the subsequent contract.

19. **Amendments:** All amendments to and interpretations of this solicitation shall be in writing from the DHEC Procurement Office. Neither DHEC o the Procurement Officer shall be legally bound by any amendment or interpretation that is not in writing.
20. **Award Criteria:** Award shall be as indicated herein to the lowest responsible and responsive bidder whose bid meets the requirements and criteria set forth in this solicitation. Award may take longer than fourteen days. A copy of the award notice should be posted on the Procurement Bulletin Board located at 2600 Bull Street in the Aycock Building directly across from the Personnel Division and next to the Bureau of Business Management Procurement Services Division.
21. **Rejection:** DHEC reserves the right to reject any bid that contains prices for individual items or services that are unreasonable when compared to the same or other bids if the rejection is in the best interest of the State.
22. **Competition:** This solicitation is intended to promote competition. If the language, specifications, terms and conditions, or any combination thereof restricts or limits the requirements in this solicitation to a single source, it shall be the responsibility of the interested bidders to notify the DHEC Procurement Office in writing so as to be received five days prior to the opening date. Notification may be "faxed" to the DHEC Procurement Office, (803) 734-4874. The solicitation may or may not be changed but a review of such notification will be made prior to award.
23. **Order of Precedence:** In the event of inconsistency between provisions of this solicitation, the inconsistency shall be resolved by giving precedence in the following order; (A) the bidding schedule, (B) general provisions and general conditions, © instruction to bidders, (D) special provisions or special conditions of the contract whether incorporated by reference or otherwise, and (E) the specifications.

GENERAL CONDITIONS

24. **Contract Administration:** Questions or problems arising after award of this solicitation/contract shall be directed to the DHEC Procurement Office, 2600 Bull Street, Columbia, SC, 29201. Reference the solicitation and contract number.
25. **Default:** In case of default by the contractor, DHEC reserves the right to purchase any or all items in default in the open market, charging the contractor with any additional costs. The defaulting contractor shall not be considered a responsible bidder until the assessed charge has been satisfied.
26. **Force Majeure:** The contractor shall not be liable for any excess costs if the failure to perform the contract arises out of causes beyond the control and without the fault or negligence of the contractor. Such causes may include, but are not restricted to, acts of God or the public enemy, acts of th Government in either its sovereign or contractual capacity, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and unusuall severe weather. But in every case the failure to perform must be beyond the control and without the fault or negligence of the contractor. If the failure to perform is caused by default of a subcontractor, and if such default arises out of causes beyond the control of both the contractor and subcontractor, and without the fault or negligence of either of them, the contractor shall not be liable for any excess costs for failure to perform, unless the supplies or services to be furnished by the subcontractor were obtainable from other sources in sufficient time to permit the contractor to meet required delivery schedule(s).
27. **Save Harmless:** (This General Condition does not apply to solicitations for service requirements). The successful bidder shall indemnify and sav harmless the State of South Carolina and DHEC and all its officers, agents and employees from all suits or claims of any character brought by reason of infringing on any patent, trade mark or copyright. The bidder shall have no liability to DHEC if such patent, trade mark or copyright infringement or claim is based upon the bidder's use of material furnished to the bidder by the State.
28. **Publicity Releases:** By submission of a bid, the contractor agrees not to refer to award of this contract in commercial advertising in such a manner as to state or imply that the products or services provided are endorsed or preferred by DHEC or user.
29. **Tax Credit Availability:** Bidders interested in income tax credit availability by subcontracting with Certified Minority Firms should contact the Office of Minority Business Assistance, 1205 Pendleton Street, Columbia, SC, 29201. (803-734-0562)
30. **Affirmative Action:** The successful bidder will take affirmative action in complying with all Federal and State requirements concerning fair employment and employment of the handicapped, and concerning the treatment of all employees, without regard or discrimination by reason of race, color, religion, sex, national origin or physical handicap.
31. **Assignment:** Unless otherwise indicated in this solicitation, no contract or its provisions may be assigned, sublet, subcontracted, or transferred without the prior written consent of the DHEC Procurement Office.
32. **Termination:** Any contract resulting from this solicitation may be terminated by DHEC by providing a thirty day advance notice in writing to the successful contractor.
33. **Non-Appropriations:** Any contract entered into by DHEC resulting from this solicitation shall be subject to cancellation without damages or further obligation when funds are not appropriated or otherwise made available to support continuation of performance in a subsequent fiscal perio or appropriated year.
34. **Convenience:** In the event that this contract is terminated or canceled upon request and for the convenience of DHEC without the required thirty days advance written notification, then DHEC shall negotiate reasonable applicable termination costs.
35. **Cause:** Any contract resulting from this solicitation may be terminated without advance notice by DHEC for cause, default or negligence on the part of the successful contractor.
36. **S.C. Law Clause:** Upon award of a contract under this bid, the person/partnership, association or corporation to whom the award is made must

comply with the laws of South Carolina which require such person or entity to be authorized and/or licensed to do business with this State. Notwithstanding the fact that applicable statutes may exempt or exclude the successful bidder from requirements that it be authorized and/or licensed to do business in this State. By submission of a bid, the bidder agrees to subject himself to the jurisdiction and process of the courts of the State of South Carolina as to all matters and disputes arising or to arise under the contract and the performance thereof, including any questions as to the liability for taxes, licenses or fees levied by the State of South Carolina.

37. **Quality of Product:** (This general condition does not apply to solicitations for printing or service requirements.) Unless otherwise indicated in this solicitation, it is understood and agreed that any item offered or shipped as a result of this solicitation shall be new and in first class condition, that all containers shall be new and suitable for storage or shipment, and that prices include standard commercial packaging. If items that are other than new (i.e., remanufactured or refurbished) are desired to be bid, the bidder must obtain written permission to bid such items at least five days in advance of the bid opening date. Written permission must be obtained from the DHEC Procurement Office.

38. **Compliance with Federal Requirements:** S.C. State or Federal requirements that are more restrictive shall be followed in bidding, awarding and performance of this contract.

39. **Drug-Free Workplace:** Required by Section 44-107-10 (Drug Free Work-Place Act) of the SC Code of Laws, 1976, as amended. By submission of a bid, the bidder certifies that he will comply with all aspects of the Drug-Free Workplace Act and will not engage in the unlawful manufacture, distribution, dispensation, possession or use of a controlled substance in the performance of this contract. This certification also applies to any individual or firm employed by the contractor.

40. **Confidentiality Policy:** The successful contractor agrees to abide by DHEC's policy of confidentiality which states in part that all information as to personal facts and circumstances given or made available to employees and/or contractors of DHEC in administration of programs shall be held confidential and shall not be divulged without the express written consent of the individual(s) to which it pertains.

41. **Item Substitution:** No substitution of items will be allowed on any purchase made from the awarded contract without written permission from the DHEC Procurement Office.

42. **Outside Contractor Program:** If applicable to scope of contract, contracted employees working on DHEC properties are entitled to information about hazardous chemicals present at DHEC; and DHEC's personnel are entitled to information about hazardous chemicals brought to the facilities by contractors. In order to assure continued compliance with the Hazard Communication Standards while contractors are on DHEC property and to control potential compliance obligations under the Superfund Amendments and Re-authorization Act, it is DHEC's policy to:

   A. Obtain written assurance that the contractor's employees have been trained to understand the hazards of the chemicals at DHEC and how to use appropriate personal protective equipment. All personal protective equipment and training required for the contractor's employees will be provided by the contractor at the contractor's expense. (This includes SC State General Services employees).

   B. Require the contractor to notify the DHEC Bureau of Business Management or the appropriate DHEC unit Director when introducing hazardous chemicals into DHEC work areas, which may harmfully expose DHEC employees. If the contractor is introducing such hazardous chemicals into any DHEC facility or onto DHEC property, the contractor shall provide the DHEC Division of Procurement Services or the DHEC unit Director copies of the Material Safety Data Sheets (MSDS) for those chemicals. The DHEC Division of Procurement Services or the DHEC unit Director should provide appropriate information to the DHEC employees before the contractor(s) enter any DHEC facility with chemicals.

   C. DHEC reserves the right to refuse to allow any contractor to bring any chemical onto DHEC property. DHEC also reserves the right to refuse to allow any contractor to bring certain quantities of chemicals on DHEC property.

43. Any written assurances, MSDS's, or correspondence required must be submitted prior to beginning any aspect of the contract.

44. **Travel:** As applicable, reimbursement to contractors for travel expenses will be made in accordance with regulations established for State employee travel and in accordance with guidelines established by DHEC.

SPECIAL PROVISIONS

45. **FOB Destination:** All deliveries shall be FOB Destination. It is agreed by the parties hereto that delivery by the contractor to the common carrier does not constitute delivery to the State. Any claim for loss or damage shall be between the contractor and the carrier. Bids received otherwise may be subject to rejection.

46. **Shipping/Delivery Charges:** Unless otherwise indicated in the "Special Conditions", any applicable shipping, delivery, assembly or installation charges are to be indicated on the bidding schedule herein.

47. **Specifications:** The specifications listed herein are not to be considered restrictive to one source of supply. However, items offered must be equal in quality and performance. The bidder to include with his bid supporting product data sufficient for DHEC to determine equality and acceptability. DHEC reserves the right to reject any offering in which the items offered are considered unsatisfactory in any manner. DHEC will determine if minor deviations from the listed features or performance are acceptable.

48. **Confidentiality:** The Contractor and all contracting employees shall not discuss, disclose, release, divulge or otherwise communicate, any confidential information as to personal facts and circumstances observed or overheard while performing work pursuant to this contract. The Contractor and all contracting employees, their agents, personal representatives and assigns, shall be fully liable and accountable for any resulting damage or injury to any person, institution or DHEC.

Dear Mr. Miner:

Environmental Monitoring Corporation (EMC) has been commissioned by Mr. Neil Alexander, the owner and operator of referenced facility, to conduct assessment and remediation activities at Crossroads Grocery. In accordance with SCDHEC's letter dated September 15, 1997, two copies of the Risk-Based Corrective Action: Tier 3 Report are being submitted for your review. This report was prepared in the format outlined in SCDHEC's "Risk-Based Corrective Action for Petroleum Releases" dated June 20, 1997. Also enclosed please find the Assessment Component Invoice (Invoice #EMC042998-01; CP#03787). Please note two cost proposals have been submitted; one for ECOVAC services (four events) plus monitoring for a one year period and the other proposal is for the SWAP system plus monitoring for a one year period. Please review both cost proposals including the literature enclosed for each fluid recovery technology and let me know what you think. If you have any questions concerning the enclosures, please contact at me at (770) 577-8909. Your on-going assistance is greatly appreciated.

Sincerely,

Mirta A. Carpenter
Environmental Manager/ Hydrogeologist

I. PLAN CERTIFICATION

I hereby certify that the information contained in the Crossroads Grocery Risk-Based Corrective Action: Tier 3 report is to the best of my knowledge true, accurate, complete, and satisfies the criteria and requirements as outlined in SCDHEC's letter to Mr. Neil Alexander dated September 15, 1997.

Printed Name (Professional Geologist)

Signature/Date (Professional Geologist)

II. REPORT OF FINDINGS

A. Introduction

The UST owner/operator is Mr. Neil Alexander, Crossroads Grocery, Route 2, Box 149, Westminster, Oconee County, South Carolina (Figures 1, 2, and 3). The site identification number is # 06742. The contractor that conducted the assessment work and prepared this Tier III Risk-Based Corrective Action is Environmental Monitoring Corporation, P.O. Box 901, Hartwell, Georgia, 30643. Any questions regarding this report should be directed to Ms. Mirta Carpenter at (770) 577-8909 or Mr. Britt Myers at (706) 376-5000. On August 24, 1997, a Rapid Assessment Plan and Assessment Component Cost Proposal were submitted for this site. On September 15, 1997, SCDHEC approved these submitted documents as stated in the September 15, 1997, DHEC letter. Crossroads Grocery is a gasoline station/convenient store currently in operation. Based on a comprehensive review of all data collected regarding the site, the source of the hydrocarbon constituents measured at the site is most likely the former tankpit (Figures 3) which was closed in June of 1990. New underground storage tanks were installed in July and August of 1990. The new underground storage tanks have passed tightness tests in February of 1993 and on January 21, 1997 (Appendix A). Note that the product lines are European Suction product lines and, as such, do not require line tightness testing. The property surrounding the site is mostly rural residential and/or pasture lands. Free-phase hydrocarbons and dissolved-phase hydrocarbons have been detected in the ground-water monitor wells on the property, in several down-gradient monitor wells on adjacent residential properties, and in a down-gradient stream approximately 650 feet south-southeast of the source area.

B. Site Characteristics

1. Site Geography

Crossroads Grocery is located within the Inner Piedmont Geologic Province. The Inner Piedmont extends from Alabama to North Carolina and is approximately 50 miles wide, on average. The Inner Piedmont is a region of gently rolling to hilly slopes with narrow-stream valleys. The elevation increases gradually from the southwest part of South Carolina to the northeast part of the state. Local relief is mainly in tens of feet but ranges to several hundred feet (Godley & Anderson, 1979) (Figure 1). Crossroads Grocery is located on the topographically high position at 932 feet above mean sea level according to the Fair Play Topographic Quad (1958, photorevised 1979). The surrounding land slopes down away from the site in all directions. Surface drainage flows primarily to the south where the slopes are steeper.

2. Exposure Analysis and Tier Evaluation

A survey of all receptors within a 1000 foot radius of the site was conducted by EMC personnel. Several residential trailers exist within a 1000 foot radius of the site. However, only one trailer 428 feet south of the site had a drinking water well (Figure 3). This drinking water well was permanently closed when the resident of the trailer reported a hydrocarbon taste in the water from their water well in January of 1993. SCDHEC officials immediately had the well permanently closed and the resident was hooked up to the local public water supply. According to a telephone discussion between Ms. Mirta Carpenter and Mr. Eddie Clements of the SCDHEC Anderson District Office on December 3, 1996, no other water supply wells were located within a 1000 foot radius during Mr. Clements water well survey in 1993. A list of all water wells reported to the Anderson District Office was provided by Mr. Rob Devlin, of the SCDHEC Anderson District Office, on December 3, 1996; no water wells were listed within 1000 foot radius of the site. According to Mr. Devlin and Mr. Clements, the closest public supply wells are located approximately three miles east of the site off of SC Highway 24 (West Oak Hwy). These public supply wells are listed at Timber Lake 1 and 2. Several small unnamed streams are located approximately 650 feet south-southeast of the site (Figure 2). These unnamed streams empty into Mud Creek. Mud Creek empties into Beaverdam Creek which empties into Lake Hartwell. Lake Hartwell is used as a public water source for many communities in Georgia and South Carolina. Underground utilities are located in the right-of-way section of the property including water lines and natural gas lines (Figure 3).

The exposure assessment for the Tier 3 evaluation was conducted using three sub-steps as follows: (1) a site conceptual exposure model was developed (Tables 1 and 2); (2) the data required to estimate the exposure dose for the complete pathways identified in (1) was identified; and (3) the dose was estimated.

Based on the site conceptual exposure model (Tables 1 and 2), the RBSL for naphthalene in soil needs to be considered (Table 3). The measured concentrations of benzene, toluene, ethylbenzene, and total xylenes in all the soil samples collected in April of 1998, do not exceed the soil RBSLs for these constituents (Table 3). Based on the site conceptual exposure model (Tables 1 and 2), the risk-based screening levels (RBSLs) for dissolved-phase benzene, toluene, ethylbenzene, total xylenes, MTBE, and naphthalene need to be determined for this site (Tables 4 and 9). The vapor inhalation pathway RBSLs do not need to be calculated nor can they be calculated since no indoor nor outdoor hydrocarbon vapor readings measured greater than 0 ppm throughout the site (Limited Assessment Report, ESCM & Associates, January 1995). On December 6, 1996, ESCM personnel measured the hydrocarbon vapor concentrations at all exposure points (Limited Assessment Report, Figure 3). Hydrocarbon vapor concentrations were detected only in the monitor well openings of those wells that either contained free product or contained dissolved-phase hydrocarbons (Limited Assessment Report, Figure 3).

The risk-based screening levels (RBSLs) for benzene, toluene, ethylbenzene, xylenes, and naphthalene in the soil contact pathway are based upon the RBSLs reported in SCDHEC's "Risk-

Based Corrective Action for Petroleum Releases" (June 20, 1997, Table B4). The appropriate RBSLs for soil are listed in Table 3 of this report. The risk-based screening levels (RBSLs) for benzene, toluene, ethylbenzene, xylenes, MTBE, and naphthalene in the ground water ingestion pathway are based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories* as stated in SCDHEC's "Risk-Based Corrective Action for Petroleum Releases" (June 20, 1997, Table B1). The RBSLs for ground water are listed in Table 4 of this report.

Tier 3 action was decided based on the comparison of the risk-based screening levels for each pathway and the actual data measured during field analyses. At Crossroads Grocery the soil contact and ground water ingestion pathways need to be considered at this time. Based upon the RBSLs established for BTEX and naphthalene constituents in soil, the adsorped-phase hydrocarbon concentrations measured in soil samples collected from soil boring SB#8, exceed the RBSL established for naphthalene (Tables 3 and 6). Based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories,* the dissolved-phase hydrocarbon concentrations measured in monitor wells MW-2, MW-3, MW-4, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, MW-14, and MW-15 exceed the RBSLs established for ground water (Tables 4 and 9). The dissolved-phase hydrocarbon concentration of benzene measured in the surface water samples collected from several locations along an unnamed stream south-southeast of the site (i.e., "stream #2") also exceeded the RBSL establish for benzene in ground water (Figure 4). Based on the comparison of the risk-based screening levels for groundwater and the actual data measured during field analyses, a Tier 3 Risk-Based Corrective Action report is warranted.

3. Utilities Survey

An underground water line is located parallel to West Oak Highway in the right-of-way of the site property. An underground natural gas line is located parallel to West Oak Highway in the right-of-way of the property. The underground gas line is buried approximately 12 feet from the centerline of the highway (Figure 3).

4. Regional and Site Geology

a. Regional Geology and Hydrogeology

Crossroads Grocery is located within the Inner Piedmont Geologic Province. The Inner Piedmont extends from Alabama to North Carolina and is approximately 50 miles wide, on average. The rocks of the Piedmont Province range from low grade metamorphosed sediments and volcanics to high grade metasedimentary and meta-igneous rocks and intrusive mafic to felsic igneous rocks. These rocks are characteristically folded and faulted and are believed to be of late Precambrian to early Paleozoic in age. The primary rocks of this region include granitic gneiss,

biotite gneiss, amphibolite, and schists, which are usually well foliated due to tectonic activity throughout the geologic history of the region (Johnson, 1964; Secor, 1987). These crystalline rocks have been structurally deformed into a series of recumbent isoclinal folds with axial planes dippings to the southeast. Furthermore, these rocks have undergone post-genetic stresses which have caused the formation of a number of fractures (Secor, 1987).

Since the Inner Piedmont Province consists of fractured media, the permeability depends on the width of the fractures and their density, or spacing. Overall, the igneous, metamorphic, and sedimentary rocks in this region have very low permeability and hydraulic conductivity range from one to five feet/day. With lower effective porosities of 1 to 5 percent, flow velocity through the fractured rock will be 0.04 to 1.0 ft/day. The Inner Piedmont region characteristically has a humid climate which enhances chemical weathering of bedrock and results in the formation of saprolite. Saprolite forms when bedrock decomposes in place due to chemical weathering. The chemical and physical characteristics of the saprolite depends on the relative quantities of parent minerals in the original bedrock. The flow domain in the Piedmont consists of the following materials: a thin layer of soil, a variably thick zone of chemically weathered bedrock (saprolite), a transition zone of less-well weathered rock that gradates into a relatively unweathered fractured bedrock (Dowd, Wenner, Carpenter; 1993).

b. Site Geology and Stratigraphy

The geologic unit mapped at Crossroads Grocery is of Upper Precambrian to Devonian in age and consists of biotite gneiss and migmatite which is light to dark gray, fine to medium-grained, and layered. Typical mineral assemblages contain garnetiferous biotite, sillimanite, oligoclase, and quartz, lesser amounts of banded granitoid layers, and veins and segregations of gneissic pegmatites, and biotite sillimanite schist (Overstreet & Bell, 1965). In April of 1998, during the installation of monitor wells MW-8 through MW-15, and the drilling of soil borings SB#3 through SB#9, the predominant lithology of the soils noted was silty sand with micro veins of coarse-grained sand (Appendix B).

C. Chemicals of Concern - Soil

1. Soil Assessment

On January 7 and 8, and February 18 through 20, 1998, sixteen geoprobe points were punched throughout the site and vicinity (Figure 4). Soil samples were collected from each point and analyzed for BTEX constituents utilizing the services of a mobile laboratory. The results of the in-field soil analyses were used as a screening tool to determine the locations for additional monitor wells (Figures 4 and 5, Appendices B and C).

On April 2, 4, and 14, 1998, EMC personnel drilled five soil borings around the lines and dispenser island and two soil borings around the current UST tankpit (Figure 6). Split spoon soil

samples were collected at two foot intervals to a total depth of 10 feet at the borings around the lines and dispenser island. At the soil borings in the UST area, split spoon soil samples were collected at five foot intervals to above the watertable or the boring was terminated after three consecutive clean split-spoon samples (Figure 6, Appendix B). Each soil sample was screened in the field for organic volatiles in accordance with established SCDHEC guidelines and lithologically classified (Table 5, Appendix B). A soil sample from the depth (vadose zone) that exhibited the highest organic reading at each soil boring was shipped to and analyzed by Goldie & Associates Laboratory (S.C. Laboratory Certification # 04108001 and # 84002002). The soil samples were analyzed for BTEX constituents (EPA method 8060), naphthalene (EPA Method 8260), and PAH constituents (EPA method 8270) (Figures 7 through 11, Tables 6 and 7, Appendix D). On April 2, 1998, during the drilling of monitor well MW-10, a soil sample was collected below the "A" horizon at a depth of 2 to 4 feet and shipped to Goldie & Associates for total organic carbon (TOC) analysis (EPA Method 415.1) (Table 6, Appendix D). However, for soil modeling purposes, the TOC value measured in soil samples collected at soil boring SB#2 on September 9, 1996, was used since this value proved to be a more realistic representation of "background" TOC levels.

On April 14, 1998, two soil samples were collected from the soil boring exhibiting the greatest hydrocarbon concentrations based on OVA-FID analyses (i.e., SB#8) in addition to the soil samples collected for BTEX and PAH analyses. Soil samples from soil boring SB#8, which was converted to monitor well MW-8, were sent to Goldie & Associates for a grain size/hydrometer analysis and for Total Petroleum Hydrocarbon analysis (EPA Method 3550) (Table 6, Appendix D). As part of the grain size/hydrometer test, the sand/silt and silt/clay fractions were segregated at 0.074 mm (#200 screen) and 0.0004 mm, respectively. According to the results of the grain size/hydrometer analysis, the dry weight percentages measured of sand, silt, and clay were 71.5%, 23.5%, and 5%, respectively (Appendix D). According to the results of the grain size/ hydrometer analysis performed on soil samples collected from soil boring SB-2, on September 9, 1996, the dry weight percentages measured of sand, silt, and clay were 41.1%, 53.8%, and 5.2%, respectively (Tier I/II RBCA, ESCM, 1/22/97; Appendix B).

2. Chemical of Concern

Concentrations of BTEX constituents analyzed in the soil samples collected at the site on April 4 and 14, 1998, measured below the soil RBSLs for these constituents (Figures 7 through 10, Tables 3 and 6, Appendix D). Concentrations of PAH constituents analyzed in the soil samples collected at the site on April 4 and 14, 1998, measured below the soil RBSLs for those PAH constituents with established RBSLs, except for naphthalene (Figure 11, Tables 3 and 7, Appendix D). Therefore, the Soil Leachability Model was applied to determine the Site Specific Target Level (SSTL) for naphthalene in soil (SCDHEC, "Risk-Based Corrective Action for Petroleum Releases, June 20, 1997; Appendix C). Refer to section II.G., of this report for a complete discussion of the findings based on the Soil Leachability Model. The soil cuttings generated during the installation of monitor wells and the drilling of soil borings in April of 1998 were placed on plastic and covered with plastic. Since the soil hydrocarbon concentrations do not

pose a threat, the soil cuttings will be spread and grass seeded on site. Therefore, no soil disposal manifest is included with this report.

D. Chemicals of Concern - Ground-Water

1. Ground-Water Assessment

Monitor wells MW-1A, MW-1, MW-2, and MW-3 were installed on-site near the source of hydrocarbons on June 16, 1993, by Froehling & Robertson, Inc., (Table 8). Monitor wells MW-4 and MW-5 were installed down-gradient of the source on June 21, 1993, by Froehling & Robertson, Inc., (Table 8). Monitor well MW-5 was installed by Froehling & Robertson, Inc., on an off-site property adjacent to a private water well where hydrocarbons were detected by the private resident (Figure 3). Monitor wells MW-6 and MW-7 were installed and developed on September 9, 1996, by ESCM and Associates, Inc., (Table 8). Monitor wells MW-6 and MW-7 were positioned to delineate the lateral extent of the CoC plume; the positions were determined by Mirta Carpenter of ESCM and Ms. Joanne Cooper of SCDHEC (Tier I/II RBCA, 1/22/97; Figure 3).

On January 7 and 8, and February 18 through 20, 1998, sixteen geoprobe points were punched throughout the site and vicinity (Figure 4). Soil samples and ground-water samples, where possible, were collected from each point and analyzed for BTEX constituents utilizing the services of a mobile laboratory. The results of the in-field soil and ground-water analyses were used as a screening tool to determine the locations for additional monitor wells (Figures 4 and 5, Appendices B and C). The monitor well locations were chosen by EMC personnel then verified by Mr. Read Miner of SCDHEC prior to installation (Figure 5). Monitor wells MW-9 and MW-15 were installed to delineate the lateral extent of the hydrocarbon plume (Figure 5). Monitor wells MW-11 and MW-13 were installed to further delineate the down-gradient portion of the hydrocarbon plume. Monitor well MW-14 was installed further down-gradient of monitor well MW-11 because a hydrocarbon sheen was noted on the ground-water samples collected from monitor well MW-11 (Table 8). Monitor well MW-12 was installed as close to the down-gradient unnamed stream ("stream #2") as possible (Figure 5). Monitor well MW-10 was installed as an up-gradient well. After the drilling of all the soil borings in the UST area and the piping and dispenser island area, the soil boring which exhibited the highest hydrocarbon readings using an organic vapor analyzer-flame ionization detector (OVA-FID) was converted to a monitor well (i.e., MW-8) (Figure 5). Refer to Table 8 and the soil lithologic logs for well construction details (Appendix B). A Well Record Form for each monitor well installed in April of 1998 is included in Appendix E of this report.

In accordance with instructions from Mr. Read Miner of SCDHEC, soil samples collected during the drilling of the monitor wells installed in April of 1998 were not forwarded to a certified laboratory for analyses. However, split spoon samples were collected during the drilling of all the monitoring wells and screened using an OVA-FID, except at monitor well MW-10 which was

only screened at a depth of 2-4 feet from where a soil sample was collected for total organic carbon analysis (Table 5, Appendix B). The split spoon samples were also used to characterize the lithology at each well location including any subsurface quartz veins (Appendix B). Based on the lithologic logs of these and previously installed monitor wells, two lithologic cross-sections were prepared parallel and perpendicular to the predominant ground-water flow direction (Figure 16).

The last ground-water sampling event at this site was conducted on April 1, 2, and 14, 1998 (Table 9, Appendices D and F). The newly installed wells were developed. All the monitor wells were purged. The purged waters were measured for pH, specific conductance, and temperature; the data was recorded on DHEC "Field Data Information Sheet for Ground Water Sampling" forms (Appendix F). Purging was considered complete once the ground-water temperature and pH measurements had equilibrated (Appendix F). Purging was not performed in monitor wells MW-1 and MW-1A since the thickness of free product in these wells exceeded 0.01 foot. After purging was complete, the dissolved oxygen content for each well was measured using a YSI Model 55 Dissolved-Phase Oxygen Meter (Figure 13, Table 9). The ground-water samples were packed on ice in a cooler and driven to Goldie & Associates Laboratory (S.C. Certification # 04108001 and # 84002002) in order to meet the 24-hour turnaround time required for an accurate ferrous iron (Fe^{2+}) analysis.

The water samples were analyzed for BTEX (EPA Method 8260), MTBE (EPA Method 8260), naphthalene (EPA Method 8260), lead (EPA Method 239.1), and PAH (EPA Method 8270) (Figures 14 through 21, Table 9, Appendix D). EDB (1,2-Dibromoethane) (EPA Method 8260) was analyzed in all ground-water samples (Figure 12, Table 9, Appendix D). Electron acceptors and by-products were assessed by analyzing all the ground-water samples for the following: Sulfates (EPA Method 375.4), Nitrates (EPA Method 9200), and Ferrous Iron (Fe^{2+}: EPA Method 8146) (Figure 13, Table 9, Appendix D). Note that EPA Method 200.7 was not used for ferrous iron (Fe^{2+}) as suggested in SCDHEC's "Risk Based Corrective Action for Petroleum Releases" document (June 20, 1997; Table 1). After sending Goldie & Associates a facsimile of the list of EPA Methods required at Crossroads Grocery, the laboratory personnel informed Ms. Mirta Carpenter of EMC that EPA Method 200.7 is used for Ferric Iron (Fe^{3+}) not Ferrous Iron (Fe^{2+}). Therefore, Ms. Carpenter telephoned Mr. Read Miner of SCDHEC for suggestions. Ms. Carpenter was told to use "best judgement" and allow the lab to choose an appropriate method for analyzing ferrous iron. Then the issue of holding times was brought forth. Ms. Carpenter then telephoned members of the University of Georgia Geology faculty including Dr. John Dowd (Hydrogeology) and Dr. Valentine Nzegueg (Geochemistry). Ms. Carpenter was told, after some debate, that a one hour holding time was not necessary and that a 24 hour holding time would suffice. Dr. Dowd forwarded an article to Ms. Carpenter entitled "Improvements to the Quantitative Assay of Nonrefractory Minerals for Fe (II) and Total Fe Using 1,10-Phenanthroline" (Amonette & Templeton, 1998). This article may serve as a good reference to SCDHEC officials when addressing the issue of how best to approach sampling and analysis methodology regarding ferrous iron. A copy of this article has been included as Appendix G.

2. Chemicals of Concern (COC)

Free-product was detected in monitor wells MW-1 and MW-1A therefore ground-water samples were not collected from these wells. Free product is being manually bailed from monitor well MW-1A on a biweekly basis. The bailed free product is being stored in a DOT certified 55 gallon drum on site. Once this drum is filled, it will be transported by an EPA approved transport company to an EPA approved disposal facility.

Free Product Recovery Tests were conducted in monitor well MW-1A and is discussed in section II.F., of this report. The greatest concentration of dissolved-phase hydrocarbons was measured in ground-water samples collected from monitor wells MW-4, MW-6, and MW-8, which are located down-gradient or adjacent to the source (i.e., old UST tankpit); the concentration of BTEX constituents, MTBE, and naphthalene in these wells, as well as in some of the other monitor wells, exceeds the risk-based screening levels (RBSLs) for groundwater (Figures 14 through 21, Tables 4 and 9, Appendix D). The site specific target levels (SSTLs) for benzene, toluene, ethylbenzene, total xylenes, MTBE, and naphthalene were calculated using a solute transport model and is discussed in section I.2., of this report.

E. Aquifer Characteristics

The Bouwer and Rice method (1976) was used to analyze slug test results. The aquifer underlying the site is unconfined and satisfies the assumptions and conditions outlined in Kruseman & de Ridder (1989) for using the Bouwer-Rice method. A computer program based on the Bouwer-Rice method was used to determine the hydraulic conductivity (AQTESOLV™, Duffield & Rumbaugh, 1989). The slug tests results were plotted on semi-log graphs to illustrate how the hydraulic conductivity is determined (Tier I/II RBCA, 1/22/97; Figures 5, 6, 7 and 8). The arithmetic mean of the hydraulic conductivity at the site, based on the slug tests conducted at monitor wells MW-1A and MW-6, is 5.41×10^{-5} ft/min (2.75×10^{-5} cm/sec) (Tier I/II RBCA, 1/22/97; Appendix C). This value is indicative of a silty sand lithology.

The rate at which groundwater actually moves through sediments can be calculated using the equation for seepage velocity or average linear velocity (Fetter, 1988). The average linear velocity or seepage velocity was calculated using the following equation:

$$V_x = \frac{Q}{n_e A} = - \frac{K \, \partial h}{n_e \, \partial l}$$

where

K is the hydraulic conductivity
V_x is the average linear velocity (seepage velocity)
n_e is the effective porosity

The hydraulic conductivity at the site, is 5.41 x 10^{-5} ft/min. This value is indicative of a silty sand lithology which is supported by the laboratory grain size/ hydrometer test results (Appendix D). The porosity has not been calculated for the sediments at this site, but the values generally range from 0.01 to 0.20 for silt and 0.10 to 0.30 for fine sand (Newell et. al., 1996). The effective porosity, n_e, can be calculated, but accurate calculations of this value require determination of the weight of the sample following gravity drainage which may take periods of one year to complete. During gravity drainage the sample must be kept in an atmosphere with 100 percent relative humidity (Fetter, 1980). "Effective porosity is difficult to measure and is typically selected by intuition or experience" (Nielsen, 1991). The Georgia Environmental Protection Division suggests using values calculated for specific yield, S_y, as a substitute for effective porosity (L. Lewis, GAEPD, personal communication, February 13, 1995). An average specific yield of 0.01 was estimated from literature source (Nielsen, 1991). The seepage velocity was calculated for the unconfined aquifer using the estimated value of S_y in place of effective porosity. The hydraulic gradient calculated at the site is 0.025 based on a 14.88 ft drop in water level at the site over a distance of 590 feet (Figure 22). Using the aforementioned equation, the seepage velocity at the site was calculated to be 85.4 ft/yr. Ground-water flow is predominantly to the south (Figures 22 and 23, Table 8).

F. Free Product Recovery Test and Analysis

On April 5, 1998, and on April 14, 1998, a free product recovery test was performed at monitor well MW-1A (i.e., FP Test #1 and FP Test #2). Monitor well MW-1A is the only monitor well with a free product thickness great enough to perform a "field bailout test." Based on the theory and procedures outlined in the article entitled, "Determination of a Realistic Estimate of the Actual Formation Product Thickness Using Monitor Wells: A Field Bailout Test," the actual product thickness in monitor well MW-1A was determined (Gruszczenski, 1987). As discussed in Gruszczenski's article, the free product recovery test is performed much like a slug test except that both the top of product and top of water depth must be measured and recorded over time.

At Crossroads Grocery, the free product was bailed out of monitor well MW-1A; then, using an oil/water electronic interface probe with varying signals, the depths of the top of product and the top of water (i.e., the oil/water interface) were recorded over a one to two hour period (Figure 24, Table 10). The data from these tests were plotted and the "inflection point" was determined. After plotting the data for both free product recovery tests FP Test #1 and FP Test #2, it was determined that the data from FP Test #1 (performed on 4/5/98) was more accurate and complete with a clear "inflection point" evident in the "top of groundwater" curve (Figure 24). As shown on the calculation brief prepared, the actual product thickness in monitor well MW-1A on April 5, 1998, was determined to be 0.21 ft compared with an apparent product thickness of 1.99 ft (Figure 25).

G. Soil Leachability

Since the naphthalene concentration in the soil sample from soil boring SB#8 exceeded the RBSL appropriate for this site, the Soil Leachability Model was applied to determine the site specific target level (SSTL) for naphthalene in soil (Appendix H). Based on the results of the Soil Leachability Model, the concentration of naphthalene in soil pore water directly in contact with contaminated soil or leachate concentration (C_w = 1.51 mg/L) was less than the concentration of naphthalene in the soil pore water necessary to protect groundwater (Cp = 42.36 mg/L). Therefore, the SSTL for naphthalene in soil did not need to be calculated (Appendix H).

H. Tier 3 Assessment

1. Site Conceptual Model

Based on the site conceptual exposure model (Tables 1 and 2) and the results of the Soil Leachability Model, the risk-based screening levels (RBSLs) for the ground water ingestion pathway is the only pathway that needs to be considered at this site. The risk-based screening level for benzene, toluene, ethylbenzene, xylenes, MTBE, and naphthalene in the ground water ingestion pathway are based upon the Maximum Contaminant Levels (MCL) published in the Environmental Protection Agency *Drinking Water Regulations and Health Advisories* as stated in SCDHEC's "Risk-Based Corrective Action for Petroleum Releases" (June, 1997, Table B1). The RBSLs for ground water are listed in Table 4 of this report. The dissolved-phase hydrocarbon concentrations measured in monitor wells MW-2 through MW-4, MW-6 through MW-11, MW-14, and MW-15 exceed the RBSLs established for ground water. The dissolved-phase hydrocarbon concentration of benzene measured in surface water samples collected from several locations along an unnamed stream southeast of the site (i.e., "stream #2"; Figure 4) also exceeded the RBSL established for benzene in ground water.

2. Data Requirements

The site specific target levels (SSTLs) for benzene, toluene, ethylbenzene and total xylenes were previously determined as part of a Tier 2 assessment and evaluation (Tier I/II RBCA, 1/22/97). The data required for a more sophisticated CoC fate and transport analysis was obtained in the field in April of 1998 including current CoC concentrations levels, electron acceptor concentrations, and metabolic by-product concentrations (Figures 12 through 21, Table 9). The application of this data to determine more accurate SSTLs is discussed in section I.2., of this report.

I. Tier 3 Evaluation

1. Exposure Point(s)

Since the COC have already migrated off the property on which the release occurred and the off-site groundwater is a current source of drinking water, an exposure point (i.e., exposure point EP-1) has been established at monitor well MW-5 which is located adjacent to the close residential well down-gradient of the hydrocarbon source (Figure 5).

2. Established SSTL(s)

For the ground-water ingestion pathway, the reduction of CoC in the saturated zone was estimated using empirical data and BIOSCREEN v. 1.3 (Newell et. al., 1996). BIOSCREEN is a screening model used to simulate remediation through natural attenuation (RNA) of dissolved hydrocarbons at sites where a petroleum release(s) has occurred. The model is based on the Domenico analytical solute transport model and, as such, can be used to simulate advection, dispersion, adsorption, aerobic decay, and anaerobic reactions which have been shown to be the primary biodegradation processes at many sites with petroleum releases (Newell et. al., 1996). The Dominico (1987) analytical model used in BIOSCREEN was developed for the multidimensional transport of a decaying contaminant species (Newell et. al., 1996). For a complete description of the governing mathematical equation, boundary conditions, assumptions, and limitations, refer to Appendix A.1 of the BIOSCREEN User's Manual (1996).

Free product has been present at the site for approximately eight years and was considered a continuous source of CoC to the groundwater during all SSTL simulations. In all the SSTL simulations, the x-axis of the plume was chosen to connect monitor wells MW-1, MW-4, MW-13 and MW-5 which is parallel to the predominant direction of ground-water flow. When determining the SSTLs for each CoC, first the CoC plume was simulated using site specific data including a "real time" calculated from the date of the suspected release to the date of the last sampling event. The site specific information was used to calibrate the 1st order decay model and/or the instantaneous reaction model to field data (Figures 27, 32, 36, 40, 44, and 48). Detailed tables and input data sheets of model parameters and assumptions are included in this report (Tables 11 through 16, Figures 26, 31, 35, 39, 43, and 47). The 1st order decay model was the best match with actual field data and the most conservative model when calibrating the MTBE, benzene, toluene, and naphthalene plumes, therefore, the 1st order decay model was used to determine the SSTL for these chemicals of concern (Figures 28, 29, 33, 34, 37, 38, 49, and 50). The instantaneous reaction model was the best match with actual field data and the most conservative model when calibrating the ethylbenzene and total xylenes dissolved-phase plumes, therefore, the instantaneous reaction model was used to determine the SSTLs for these chemicals of concern (Figure 41, 42, 45, and 46). For each CoC, the Dominico fate and transport model in BIOSCREEN was used to model the actual CoC plume using site-specific data and the 1st order decay and/or instantaneous reaction models were calibrated by adjusting certain model parameter such as retardation factor. Tables 11 through 16 were prepared to clearly show all model

parameter values used, assumptions, and data sources. After the individual CoC plumes were modeled and calibrated using "real" time, the time was increased until the CoC plume's down-gradient edge reached zero concentration at the same distance from the source from some point in time to infinity based on the 1st order decay model (Tables 11 through 16). This determined time at which the CoC plume has reached it's maximum dimensions using a continuous source is the time at which the CoC concentration becomes asymptotic (i.e., the time at which the CoC plume has reached it's maximum extent which represents the worse case scenario CoC plume). This determined time, based on the worse case scenario CoC plume, was then used to predict the SSTLs of each CoC by adjusting the CoC concentration at the source until the CoC concentration at the point of compliance did not exceed the RBSL for each CoC (Tables 11 through 16, Figures 29, 34, 38, 42, 46, and 50). When determining the SSTLs, note that for ethylbenzene and total xylenes, the best fit and most conservative model was the instantaneous reaction model; whereas, the 1st order decay model was the best fit and most conservative model with the other CoCs. In most cases, the instantaneous reaction model seemed to simulate the middle section of the plume with greater accuracy while the 1st order decay model simulated the middle to down-gradient end section of the plume with greater accuracy. Predicting SSTLs based on the worse case plume results in the most stringent, thus most conservative, SSTLs. The most conservative SSTLs were predicted so that the down-gradient point of compliance is never impacted.

The results of the modeling simulations indicate that the most conservative site-specific target levels (SSTLs) in the groundwater to be met at the source so that the RBSLs will be met at the point of compliance (i.e., MW-4) are as follows: MBTE SSTL = 2.8 ppm based on the 1st order decay model; benzene SSTL = 0.4 ppm based on the 1st order decay model; toluene SSTL = 38 ppm based on the 1st order decay model; ethylbenzene SSTL = 68.5 ppm based on the instantaneous reaction model; total xylenes SSTL = 263 ppm based on the instantaneous reaction model, and naphthalene SSTL = 15.9 ppm based on the 1st order decay model (Figures 29, 34, 38, 42, 46 and 50, respectively). Since the point of compliance (i.e., MW-4) is located 450 feet up-gradient of the impacted unnamed stream, these SSTLs should be conservative enough to eliminate further discharge into the stream. In comparison to the SSTLs calculated for BTEX constituents using the SOLUTE v.3.01 analytical, solute-transport, one-dimensional model in the Tier I/II RBCA, the SSTLs calculated using BIOSCREEN, which incorporated more site specific data and considered the worse case scenario CoC plume, resulted in less stringent SSTLs for benzene and ethylbenzene, almost the same SSTL for toluene, and a more stringent SSTL for total xylenes (Tier I/II RBCA, 1/22/97).

3. Established Point(s) of Compliance

Monitor well MW-4 is an established point of compliance. Monitor well MW-4 is located hydraulically down-gradient of the source area and hydraulically up-gradient of monitor well MW-5 (exposure point). Monitor well MW-4 is where the dissolved-phase CoCs must be at or below the risk-based screening levels (RBSLs).

4. BTEX Plume Evaluation

BIOSCREEN was implemented to determine the following: (1) if remediation through natural attenuation will be appropriate for Crossroads Grocery; and (2) the site specific target levels (SSTLs) for benzene, toluene, ethylbenzene, total xylenes, naphthalene, and MTBE. In order to determine if remediation through natural attenuation would be appropriate for this site, the BTEX plume was modeled using the instantaneous reaction model (Table 17, Figures 51 through 55). The movement of the BTEX plume from 1990 (the best guess for when the release occurred) to present was reproduced using BIOSCREEN. The BTEX plume model was calibrated to actual field values by adjusting some of the model parameters such as retardation factor and solute half-life. Both the 1st order decay model and instantaneous reaction model matched the observed plume length; therefore, the longitudinal dispersivity did not need to be adjusted (Figures 51 and 52). The solute half-life used was the half-life of benzene (Table 17, Figure 51). Refer to Table 17 for a complete list of parameters and assumptions used in the final BTEX plume simulation. The values for the electron acceptors (NO_3, SO_4, and O_2) as well as the metabolic by-products (i.e., Fe^{2+} and CH_4) were based on actual laboratory results and, in the case of O_2, on field measurements (Tables 9 and 17). The electron acceptors and metabolic by-products are used by the instantaneous reaction model. As shown on Figure 52, the instantaneous reaction model matches the field data the best (Figures 52 and 53). As shown in Figure 53, the current plume is estimated to contain 25.8 kg of BTEX. BIOSCREEN indicates that the plume under a no-degradation scenario would contain 46.2 kg of BTEX. Therefore, 44% of the BTEX mass that has left the source since 1990 has biodegraded through natural attenuation processes. The current plume contains 0.2 acre-ft of contaminated water, with 0.076 acre-ft/yr of water being contaminated as it flows through the source. Since 44% of the plume is being remediated through natural attenuation and 0.2 acre-ft is the volume of groundwater in the plume, 0.088 acre-ft are being remediated each year through natural attenuation (i.e, 44% of 0.2 acre-feet). Assuming the plume is at steady state, 0.076 acre-ft of groundwater becomes contaminated per year with the same amount (i.e., 0.088 acre-ft) being remediated every year due to in-situ biodegradation and other attenuation processes. Assuming the plume is at steady state, this indicates that a long-term monitoring approach would be appropriate for this site rather than active remediation. However, based on the BTEX plume modeling, the plume is not at steady-state but appears to be growing in size. If the free-product were actively removed then the BTEX plume should reach steady state. At that time, a monitoring program along with updated modeling should be implemented to verify that the BTEX plume has reached steady-state and is no longer growing in size. The results of the 1st order decay model were less conservative than the results of the instantaneous reaction model. In other words, 81% of the plume mass has been removed by biodegradation according to the 1st order decay model versus 44% according to the instantaneous reaction model (Figures 53 and 54). Note that in the instantaneous reaction model a greater "plume mass with no biodegradation" is calculated compared to the 1st order decay and no degradation scenarios (Figures 53, 54, and 55). Therefore, the use of the instantaneous reaction model leads to more conservative decision making.

J. Tier 3 Action

Enhanced free-product recovery is recommended as soon as possible. Two separate cost proposals for enhanced free-product recovery were previously submitted to DHEC (addressed to Ms. Joanne Cooper). Free product is currently being bailed on a biweekly basis. Based on the results of BTEX plume modeling presented in this report, if the free-product were actively removed, then the BTEX plume should reach steady state. At that time, a monitoring program along with updated modeling should be implemented in order to verify the following: (1) that the BTEX plume has reached steady-state and is no longer growing in size; (2) that the site specific target levels (SSTLs) for BTEX constituents, MTBE, and naphthalene have been obtained in the source area (MW-1A, MW-1, and MW-8); (3) and that the RBSLs for the BTEX constituents, MTBE, and naphthalene in the groundwater have been obtained at the point of compliance (MW-4). After enhanced free product recovery has been completed at this site, if CoC concentrations continue to exceed the SSTLs, then active corrective action for the dissolved-phase CoC concentrations is recommended at this site.

TABLE 1
Complete Exposure Pathways at Crossroads Grocery
(Current Land Use)

Potentially Exposed Population	Exposure Route, Medium, and Exposure Point	Pathway Selected for Evaluation?	Reason for Selection or Non-selection
Off-site resident	Ingestion of ground water from impacted water well	Yes	No drinking water wells in area, **but surface water receptor approximately 650 feet down-grad of site could be affected**
	Direct contact with surface soil	No	For soils collected in April of 1998, on-site soil hydrocarbon readings measured below the soil RBSLs except for naphthalene. Based on the Soil Leachability Model, naphthalene in the soil does not pose a threat.
	Inhalation while showering	No	Residents do not use ground water for showering
	Dermal contact while showering	No	Residents do not use ground water for showering
	Inhalation of volatiles	No	0 ppm with FID-PID except inside on-site monitor wells
On-site resident	Ingestion of ground water	No	No residents on-site
	Direct contact with surface soil	No	
	Inhalation while showering	No	
	Dermal contact while showering	No	
	Inhalation of volatiles	No	

Potentially Exposed Population	Exposure Route, Medium, and Exposure Point	Pathway Selected for Evaluation?	Reason for Selection or Non-selection
Worker	Ingestion of ground water	No	No water well on site
	Direct contact with surface soil	No	For soils collected in April of 1998, on-site soil hydrocarbon readings measured below the soil RBSLs except for naphthalene. Based on the Soil Leachability Model, naphthalene in the soil does not pose a threat.
	Inhalation while showering	No	N/A

Note that for individual constituents, the total biodegradation capacity must be reduced to account for electron acceptor utilization by other constituents present in the plume (BIOSCREEN, 1996; p.29) • "The observed Fe^{2+} is only 10 % of actual Fe^{2+} that has been generated due to the sorption of Fe^{2+} onto the aquifer matrix" (BIOSCREEN, 1996; p.24) Therefore, the actual Fe^{2+} value used in the simulation is the averaged measured value x 0.10. • The median value for CH_4 was used (BIOSCREEN, 1996; p.24) • The solute half-life used was based on literature values (ASTM, 1995) then changed to calibrate 1st order decay model.
General	• Modeled Area Length: • Modeled Area Width: • Simulation Time (Calibration Simulations): • Simulation Time (SSTL Simulations):	370 (ft) 230 (ft) 7.87 (years) 107 (years) based on following results: @ 100 years, total xylenes concentration = 0 ppm @ 2,430 feet from source; @ 107, 108, 109, 110, 120, 180, 190, 200 and 250 years, total xylenes concentration = 0 ppm @ 2,700 feet from source	• Based on area of affected groundwater plume • Steady-state flow • Time was calculated from suspected time of release to present • Time was determined by running simulations with increasing times until the down-gradient edge of CoC plume was 0 ppm at the same distance over time
Source Data	• Source Thickness: • Source Concentration:	20 (ft) (See Figure 19 and 16)	• Based on geologic logs and Total Xylenes monitoring data
Actual Data	• Distance from Source (ft): • Total Xylenes Conc. (mg/L):	0' 210' 335' 370' 390 13.3 0.434 0 (FP)	• Based on observed concentration contour at site (see Figure 19)
OUTPUT	Refer to Figure 43 for: Refer to Figure 44 for: Refer to Figure 45 for: Refer to Figure 46 for:	• Xylenes: Calibration Final Simulation (BIOSCREEN Input Data) • Xylenes: Calibration Final Simulation (Centerline Concentrations) • Xylenes: SSTL Final Simulation (BIOSCREEN Input Data) • Xylenes: SSTL Final Simulation (Centerline Concentrations)	

TABLE 16

Naphthalene Site Specific Target Level (SSTL = 15.9 ppm) Based on the 1st Order Decay Model Modeling Data Using BIOSCREEN (1996)

Data Type	Parameter	Value	Source
Hydrogeology	• Hydraulic Conductivity: • Hydraulic Gradient: • Porosity:	2.75 x 10^{-5} (cm/sec) 0.03 0.01	• Slug-tests results • Static water level measurements • Estimated (BIOSCREEN, 1996)
Dispersion	Original • Longitudinal Dispersivity: • Transverse Dispersivity: • Vertical Dispersivity:	 15.0 (ft) 1.5 (ft) 0.0 (ft)	• Based on estimated plume length of 350 ft (Figure 21) • Note: No calibration was necessary to match the observed plume length.
Adsorption	• Retardation Factor: • Soil Bulk Density ρb: • Organic Carbon Partition Coefficient (K_{oc}): • Fraction Organic Carbon (f_{oc}):	3.045 1.7 Kg/L 1,288 (L/kg) 0.0027%	• Can be calculated from $R = 1 + \rho b/n \times f_{oc} \times K_{oc}$, however R was changed to calibrate model • Soil Clay % & Sand % from lab grain-size analysis 4/14/98; (SCDHEC, 1997; Figure C3) • Literature (ASTM, 1995; Tables X1.2 & X2.6) converted using $\log(K_{oc}) \times 10^{x} = K_{oc}$ • Lab Analysis of Total Organic Carbon using (1 x 10^{-6}) to convert from mg/kg to decimal % (SCDHEC, 1997; p.C8)
Biodegradation	Electron Acceptor: Background Conc. (mg/L): Minimum Conc. (mg/L): Change in Conc. (mg/L): Metabolic By-Product: Max. Conc. (mg/L): Avg. Conc. (mg/L): Value used in BIOSCREEN Model: Solute Half-Life:	O_2 NO_3 SO_4 7.05 1.78 73.2 - 0.66 - 0.2 - 1 **6.39** **1.58** **72.2** Fe^{2+} CH_4 0.13 0.074 **0.74** **7.2** Note: The **bolded** values are BIOSCREEN input values. 1.23 yrs	• Based on April 1998 groundwater sampling program conducted by Environmental Monitoring Corporation. • "The observed Fe^{2+} is only 10 % of actual Fe^{2+} that has been generated due to the sorption of Fe^{2+} onto the aquifer matrix" (BIOSCREEN, 1996; p.24) Therefore, the actual Fe^{2+} value used in the simulation is the averaged measured value x 0.10. • The median value for CH_4 was used (BIOSCREEN, 1996; p.24) • The solute half-life used was based on literature values (ASTM, 1995) then changed to calibrate 1st order decay model.

Data Type	Parameter	Value	Source
General	• Modeled Area Length: • Modeled Area Width: • Simulation Time (Calibration Simulations): • Simulation Time (SSTL Simulations):	350 (ft) 190 (ft) 7.87 (years) 12 (years) based on following results: @ 10 and 11 years, total naphthalenes concentration = 0 ppm @ 560 feet from source; @ 12, 13, 14, 15, 20, 30, 40, 50, 100 and 200 years, total naphthalenes concentration = 0 ppm @ 640 feet from source	• Based on area of affected groundwater plume • Steady-state flow • Time was calculated from suspected time of release to present • Time was determined by running simulations with increasing times until the down-gradient edge of CoC plume was 0 ppm at the same distance over time
Source Data	• Source Thickness: • Source Concentration:	20 (ft) (See Figures 21 and 16)	• Based on geologic logs and Naphthalene monitoring data
Actual Data	• Distance from Source (ft): • Naphthalene Conc. (mg/L):	0' 210' 335' 350' 100 0.882 0.0247 0 (FP)	• Based on observed concentration contour at site (see Figure 21)

Subject: Field Screening with Photovac 10s plus Portable Gas Chromatograph Services
Crossroads Grocery Site
Tokeena, South Carolina
ESI Project No. G-1286

Dear Mrs. Carpenter,

As requested, Ecological Services, Inc. conducted field screening of Geoprobe™ soil and groundwater samples collected January 7 through January 9, 1997 at the Crossroads Grocery site in Tokeena, South Carolina. Seven groundwater samples and thirty-seven soil samples were collected and field screened for benzene, toluene, ethylbenzene, and total xylenes (BTEX) with a Photovac 10splus Gas Chromatograph. The field screening lab reports, gas chromatographs, and raw data for the samples are included with this letter.

In addition, information pertaining to the Photovac 10s plus GC mechanics is included with this letter.

If you have any questions concerning this report or if we can be of any further service, please do not hesitate to call.

Sincerely,

ECOLOGICAL SERVICES, INC.

Diana G. Lanier
Sr. Lab Analyst

6/25/98
Report by
Environmental
Monitoring Corp

SOUTH CAROLINA DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL

Ground Water Protection Division | 2600 Bull Street | Columbia, S.C. 29201 | (803) 734-5331 | Water Well Record

1. LOCATION OF WELL

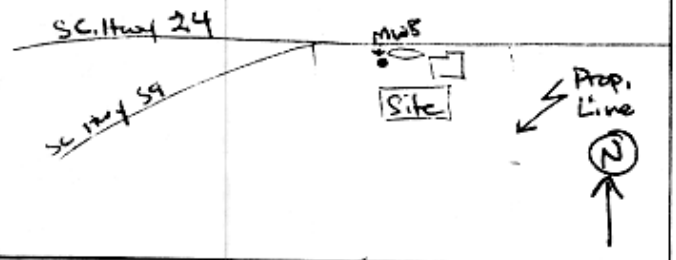
County: Oconee | System Name: Crossroads Grocery MW-8

Latitude: | Longitude:

Distance And Direction from Road Intersections: 100' due East of S.C. Hwy 24 & S.C. Hwy 59

Street address & City of Well Location

Sketch Map: (See example on back)



2. CUTTING SAMPLES ☐ Yes ☑ No

Geophysical Logs ☐ Yes (Please enclose) ☑ No

FORMATION DESCRIPTION	THICKNESS OF STRATUM	DEPTH TO BOTTOM OF STRATUM

Indicate water bearing zones

(use a 2nd sheet if needed)

3. REMARKS

4. OWNER OF WELL: Neil Alexander
Address: Crossroad Grocery Route 2, Box 149 Westminster SC
Telephone No.

Engineer: EMC
Address: P.O. Box 901 Hartwell GA 30643
Telephone No. 706-376-5000

5. WELL DEPTH (Completed) 45 ft. | Date Started: | Date Completed: 4/14/98

6. ☐ Mud Rotary ☐ Jetted ☑ Bored ☐ Dug ☐ Air Rotary ☐ Driven ☐ Cable tool ☐ Other

7. USE: ☐ Domestic ☐ Public Supply-Permit No. ☐ Industry ☐ Irrigation ☐ Air Conditioning ☐ Commercial ☑ Test Well ☐

8. CASING: ☐ Threaded ☐ Welded
Diam. 2"
Type ☑ PVC ☐ Galvanized ☐ Steel ☐ Other
2 in. to 45 ft. depth
in. to ft. depth
Height: Above/Below flush mounted
Surface ft.
Weight lbs./ft.
Drive Shoe? ☐ Yes ☐ No

9. SCREEN:
Type: 0.010" PVC Diam 2"
Slot/Gauze 0.010" Length 20'
Set Between 25 ft. and 45 ft.
ft. and ft.
NOTE: MULTIPLE SCREENS USE SECOND SHEET
Sieve Analysis ☐ Yes (Please enclose) ☑ No

10. STATIC WATER LEVEL
28.87 ft. below ~~land surface~~ top of casing after 24 hours

11. PUMPING LEVEL Below Land Surface
ft. after hrs. pumping G.P.M.
Pumping Test: ☐ Yes (Please enclose) ☑ No
Yield

12. WATER QUALITY
Chemical Analysis ☑ Yes ☐ No Bacterial Analysis ☐ Yes ☑ No
Please Enclose Lab Results. See RBCA Tier III 4/29/98

13. ARTIFICIAL FILTER (Gravel Pack) ☑ Yes ☐ No
Installed from 23 Sand ft. to 45 ft.
Effective size uniformity coefficient

14. WELL GROUTED? ☑ Yes ☐ No
Neat Cement ☑ Sand Cement ☐ Concrete ☐ Other ☐
Depth From 0.5 ft. to 21 ft.

15. NEAREST SOURCE OF POSSIBLE CONTAMINATION: 1 Feet S Direction
gasoline Type Well disinfected upon completion ☐ Yes ☑ No Type monitor well Amount

16. PUMP: Date Installed not installed ☑
Mfr. name model no.
H.P. volts length of drop pipe ft. capacity gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

17. WATER WELL CONTRACTOR'S CERTIFICATION: This well was drilled under my supervision and this report is true to the best of my knowledge and belief.

Appendix F

Field Data Information Sheets of Ground Water Sampling

Field Data Information Sheet for Ground Water Sampling for MW-2

Date (mm/dd/yy) 4/2/98
Field Personnel Mirta A. Carpenter and J. Britt Myers
General Weather Conditions Mild and Sunny
Ambient Air Temperature ≈ 75°F

Facility Name Crossroads Crocery
Site ID# # 06742

Quality Assurance:

pH Meter:
serial no. # 9612
Ph/Temp/Conductivity Meter:
Beta Tech, Inc.
Cambridge, MA 21613
Pine Environmental Services
Rental # 00280

Conductivity Meter:
serial no.# 9612

Chain of Custody:
(refer to Appendix D)

Well # MW-2

Well Casing Diameter (D) 2 inch or 0.167 feet
Conversion Factor (C): $\pi \times (D/2)^2 = 0.022$ ft^2
Total Well Depth (TWD) 30 feet
Depth to GW (DGW) 26.98 feet

Length of Water Column (LWC=TWD-DGW) 3.02 feet

1 Csg. Volume (LWC x C) = 3.02 ft x 0.022 ft^2 = 0.066 ft^3
1 Csg. Volume = 0.066 ft^3 x 7.48 gal/ft^3 = 0.49 gallons
3 Csg. Volume = 3 x 0.49 gals. = 1.48 gallons (Std. Purge Volume)

Total Volume of Water Purged Before Sampling 0.25 gallons

Well Test Procedures and data:	Initial	1st vol.	2nd vol.	3rd vol.	4th vol.	5th vol.	Post	Sampling
Volume Purged (gallons)	500 mL	40 ± 20 mL	40 ± 20 mL	40 ± 20 mL				1/4 gal
Time (military)	11:30	11:50	12:15	12:40				12:40
pH(s.u.)	8.23	7.31	7.07	7.40				7.40
Specific Cond. (umhos/cm)	3.21 x 100	3.14 x 100	3.14 x 100	3.26 x 100				3.26 x 100
Water Temp (°F)	72.5	72.9	72.8	73.1				73.1
Turbidity (*)	2	2	2	2				2

* subjective (1) None (2) Faint (3) Moderate (4) Strong

Remarks: This well is usually dry and very difficult to sample due to slow recharge and little groundwater available in well. All required constituents were analyzed except PAH.

Field Data Information Sheet for Ground Water Sampling for MW-3

Date (mm/dd/yy) 4/2/98
Field Personnel Mirta A. Carpenter and J. Britt Myers
General Weather Conditions Mild and Sunny
Ambient Air Temperature ≈ 75°F

Facility Name Crossroads Crocery
Site ID# # 06742

Quality Assurance:

pH Meter:
serial no. # 9612

Conductivity Meter:
serial no.# 9612

Ph/Temp/Conductivity Meter:
Beta Tech, Inc.
Cambridge, MA 21613
Pine Environmental Services
Rental # 00280

Chain of Custody:
(refer to Appendix D)

Well # MW-3

Well Casing Diameter (D) 2 inch or 0.167 feet
Conversion Factor (C): $\pi \times (D/2)^2 = 0.022$ ft²
Total Well Depth (TWD) 30 feet
Depth to GW (DGW) 27.30 feet

Length of Water Column (LWC=TWD-DGW) 2.7 feet

1 Csg. Volume (LWC x C) = 2.7 ft x 0.022 ft² = 0.060 ft³
1 Csg. Volume = 0.060 ft³ x 7.48 gal/ft³ = 0.44 gallons
3 Csg. Volume = 3 x 0.44 gals. = 1.32 gallons (Std. Purge Volume)

Total Volume of Water Purged Before Sampling 0.63 gallons

Well Test Procedures and data:	Initial	1st vol.	2nd vol.	3rd vol.	4th vol.	5th vol.	Post	Sampling
Volume Purged (gallons)	0.25 gal	40 ± 20 mL	40 ± 20 mL	40 ± 20 mL				0.63 gal
Time (military)	9:00	9:30	9:50	11:00				11:00
pH(s.u.)	8.12	8.11	8.03	8.03				8.03
Specific Cond. (umhos/cm)	3.34 x 100	3.36 x 100	3.39 x 100	3.43 x 100				3.43 x 100
Water Temp (°F)	66.7	66.8	69.1	69.1				69.1
Turbidity (*)	2	2	2	2				2

* subjective (1) None (2) Faint (3) Moderate (4) Strong

Remarks: This well is usually dry and very difficult to sample due to slow recharge and little groundwater available in well. All required constituents were analyzed except PAH.

Field Data Information Sheet for Ground Water Sampling for MW-4

Date (mm/dd/yy) 4/2/98
Field Personnel Mirta A. Carpenter and J. Britt Myers
General Weather Conditions Warm and Sunny
Ambient Air Temperature ≈ 80°F

Facility Name Crossroads Crocery
Site ID# # 06742

Quality Assurance:

pH Meter:
serial no. # 9612
Ph/Temp/Conductivity Meter:
Beta Tech, Inc.
Cambridge, MA 21613
Pine Environmental Services
Rental # 00280

Conductivity Meter:
serial no.# 9612

Chain of Custody:
(refer to Appendix D)

Well # MW-4

Well Casing Diameter (D) 2 inch or 0.167 feet
Conversion Factor (C): $\pi \times (D/2)^2 = 0.022$ ft²
Total Well Depth (TWD) 25 feet
Depth to GW (DGW) 21.45 feet

Length of Water Column (LWC=TWD-DGW) 3.55 feet

1 Csg. Volume (LWC x C) = 3.55 ft x 0.022 ft² = 0.077 ft³
1 Csg. Volume = 0.077 ft³ x 7.48 gal/ft³ = 0.58 gallons
3 Csg. Volume = 3 x 0.58 gals. = 1.73 gallons (Std. Purge Volume)

Total Volume of Water Purged Before Sampling 2.5 gallons

Well Test Procedures and data:	Initial	1st vol.	2nd vol.	3rd vol.	4th vol.	5th vol.	Post	Sampling
Volume Purged (gallons)	0.5 gals	0.5 gals	0.5 gals	1.0 gal				2.5 gals
Time (military)	13:00	13:30	13:55	14:15				14:15
pH(s.u.)	7.26	7.29	7.29	7.10				7.10
Specific Cond. (umhos/cm)	3.51 x 10	3.40 x 10	3.38 x 10	3.37 x 10				3.37 x 10
Water Temp (°F)	73.4	69.4	69.4	69.7				69.7
Turbidity (*)	3	3	2	2				2
* subjective (1) None (2) Faint (3) Moderate (4) Strong

Introduction

The following Corrective Action Plan provides a summary of the efforts proposed to reduce the chemicals of concern (CoC) impacting DHEC Site Number 06742 to or below the Site Specific Target Levels (SSTL) and to reduce the floating hydrocarbon in MW-4 and MW-8 to a thickness less than 0.01 feet, as stipulated in the solicitation bid number SB-6672-07/29/99-REB.

Technologies

Product Recovery

SMME proposes the use of vacuum-enhanced, total fluids recovery from MW-4 and MW-8. Estimates of floating hydrocarbons range from 700 to 2,000 gallons, based on the assessment conducted by Environmental Monitoring Corporation.

A 3,500 gallon vacuum-truck will be used to with-draw mixed water and product from the monitoring wells. We currently anticipate that one trip will reduce product thickness to a fraction of an inch. Complete reduction of the product layer will then be accomplished biologically during the Phoster treatment.

CoC Reduction

The technology to be used in the reduction of the chemicals of concern will be the PHOSter II™ technology as adapted by Freeman & Vaughn Engineering, Inc. PHOSter II™ is a patented bio-stimulation process that delivers a measured and predetermined combination of phosphorous, nitrogen and oxygen to VOC and/or semi-VOC contaminated soil and groundwater. The volume and mixture of gaseous nutrient, flow rate, pressure and frequency of the pulsed injections are determined by the types and volumes of contaminants of concern. Calculations are also based on site conditions such as soil types, groundwater flow rates, dissolved oxygen in the groundwater, base line nutrient levels and microbial plate counts. A Safety Evaluation of the PHOSter II™ technology has been made by the State Toxicologist, Dr. John F. Brown, DVM. A memo to this effect is provided as an attachment to this report.

The gas injection volumes and rates are far below the levels that could induce air sparging. Because nutrients are injected in a mixture of air, the terms "bioventing" (defined as "air slowly injected into the unsaturated soils") and "biosparging" (defined as "air and specific gases injected into saturated sediments"), may be applied to the PHOSter II™ process. Injection points are sealed against air, gases or vaporized contaminates venting to the atmosphere.

Injection of gaseous nutrients into soil and groundwater can be administered through vertical or horizontal air injection wells or may incorporate existing monitoring wells through specifically fitted ports in the well heads.

The basic PHOSter II™ units are self-contained and housed in a covered metal trailer with lockable entry doors. The standard unit conforms to all DOT standards for size

and weight and are towed by a full size pickup truck or utility vehicle. Once mobilized to the site, the unit will be connected to a 220-volt single phase electrical supply, provided by Blue Ridge Power Co-operative. The poles and meters will be sited with approval from DHEC and the site owner. The proposed trailer and pole locations are shown in Figure 4. The process unit is also equipped with a modem to allow off site monitoring of the system's PLC. The unit will be equipped to inject through twelve separate injection ports.

During operation of the treatment unit, SMME will conduct confirmatory testing to determine the increase in heterotrophic bacteria and decrease in Chemical Oxygen Demand. Other tests to be conducted during remediation will include, DO concentration and rate of utilization, pH change and initial and quarterly analysis to quantify the reduction of CoC, as required by DHEC.

Construction

Figure 4 depicts the location of the proposed injection wells, trailer locations and proposed power/telephone pole locations for the three injection scenarios. Table 1 provides the property owner's name, address and telephone number (if available) for those properties impacted during the construction.

The total number of injection wells proposed for this effort is 14.

Figure 5 is provided as a typical injection point. Injection tubing will consist of ½" nominal diameter PEX piping. This material has shown good chemical resistance and has sufficient wall thickness to withstand shallow burial. Injection tubing will be buried from the trailer to the injection well head (unless requested otherwise by the property owner).

Remediation Schedule

The site specific design is provided as an appendix to this plan. In it, SMME has anticipated the treatment time in a typical treatment zone to be 175 days. Using this information and assuming that remediation could require up to twice the time calculated, SMME has anticipated the schedule proposed in Table 2. Assuming we are awarded a construction permit by November 14, we should begin remediation not later than December 7. Completion of treatment is expected to be by December of 2000. Well abandonment, power and telephone service disconnection and pole removal should occur within 30 days of the final site assessment or by May of 2001.

Monitoring Proposal

Site monitoring for system effectiveness and progress determination will consist of heterotrophic plate count and Chemical Oxygen Demand (COD) of two wells in the treatment area. These samples will be recovered monthly and will be used as evidence of the remediation progress.

Site monitoring for the chemicals of concern (CoC) will be as dictated in the solicitation SB-6672 and will consist of initial and quarterly monitoring of those identified in Table 3. BTEX, MTBE and Naphthalene will be analyzed using EPA Method 8260 or EPA

Method 8021B (modified). Once compliance with the SSTLs is shown due to regular quarterly sampling, SMME will install up to eight (8) additional monitoring points (at DHEC's discretion). The listed sampling points and the additional wells will be monitored for two more quarters (verification monitoring) and will include sampling and analysis for dissolved oxygen, ferrous iron, nitrate and sulfate. SMME anticipates quarterly monitoring for up to one year then two additional quarters of verification monitoring.

Quarterly monitoring will also document the water and product levels in the wells of concern. Depth and elevations (based on MEC assessment) will be documented in the format presented in Table 4.

Abandonment

Once the last assessment report documenting site remediation has met approval from the UST Section, SMME will conduct the project close-out. This will consist of disconnecting and removing the trailer mounted treatment unit, disconnecting the telephone and power services, removal of the power pole and utility boxes and abandonment of all site injection, recovery and monitoring wells. Wells will be closed by grout-filling, in compliance with the South Carolina Well Standards and Regulations R.61-71.

MEMORANDUM

TO: Read Minor, PG
Underground Storage Tank Management Division

FROM: John F. Brown, DVM, PhD
State Toxicologist
Division of Health Hazard Evaluation

RE: Safety Evaluation of PHOS tex II
Bioremediation Technology for Petroleum Contaminated Soil

1. I have reviewed the responses to DHEC Guidelines for Health Hazard Evaluation of Bioremediation Procedures for Contaminated Soil using the process noted above. The responses were submitted by James C.Vaughn, Jr. PE of Freeman & Vaughn Engineering, Inc. of Savannah, Georgia. All proprietary information submitted will be secured and kept confidential, as requested.

2. If the described process noted above is used in an approved application procedure, I find no significant threat to the public health and environmental integrity of South Carolina and have no objection to the described procedure being carried out at approved, designate sites. It is noted that some items of the process have an explosion potential if submitted to excessive pressure and temperature and will caution that needed safety precautions be carried out.

3. This review does not address the effectiveness of the proposed procedure. Efficacy evaluation must be made by other parties, if required.

IX. Attachments

Complete the following questions on a separate sheet(s) and number accordingly; see instructions for Classes II, III, and V, complete and submit on a separate sheet(s) attachments A-U as appropriate. Attach maps where required. List attachments by letter which are applicable and include with your application.

X. Certification

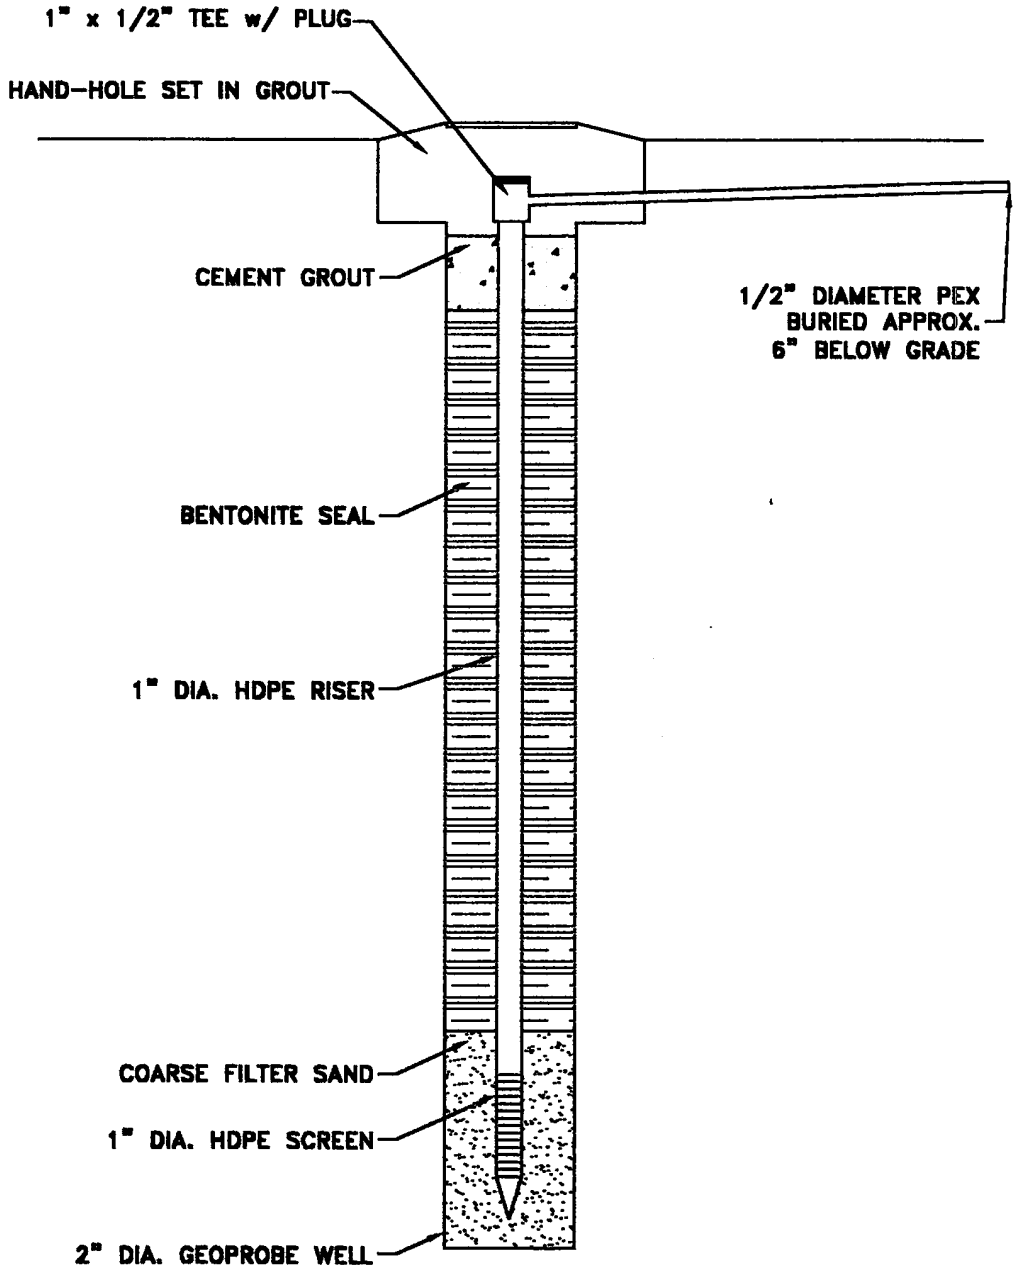
I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of a fine and imprisonment.

A. Name and Title (Type or Print)	B. Phone No.
Richard B. Smith, P.E.	(404) 371-9332
C. Signature: Richard B. Smith	D. Date Signed: September 27, 1999 9/27/99

Attachment A: Activity for Review

This Underground Injection Control Permit Application is provided due to the proposed Corrective Action to reduce the chemicals of concern (CoC) impacting DHEC Site Number 06742 to or below the Site Specific Target Levels (SSTL), as stipulated in the solicitation bid number SB-6672-07/29/99-REB. The technology selected for this effort is nutrient injection to stimulate growth of the native bacteria population (in an aerobic environment) which, in turn, utilize the hydrocarbon contamination as a food source. The method of supplying the bacteria with nutrients and oxygen is through groundwater injection, in the gas phase.

Attachment B: Well Construction Details
(See following figure)



NEW INJECTION POINT

SOUTH CAROLINA DHEC 2600 BULL STREET COLUMBIA, SOUTH CAROLINA	SMME Smith Monitoring & Maintenance Engineering, Inc. Engineering, Wastewater and Groundwater Remediation System Construction, Operation and Maintenance 145 Merrill Avenue Decatur, Georgia 30030 Telephone: (404) 371-9332
PROJECT #: / DRAWN BY: RBS	INJECTION WELL DETAIL CROSS ROADS GROCERY OCONEE COUNTY, SOUTH CAROLINA
SCALE: Not to Scale / DATE: September, 1999	FIGURE 5

Attachment C: Operating Data

1) Injection rate per well: 2 cfm average/5 cfm maximum
2) Injection pressure: 5 psi minimum/15 psi maximum (as measured at the trailer and includes static pressure and dynamic losses. Rate and pressure is varied for each well to ensure that sufficient pressure is provided to overcome the water column but not enough to overcome the well seal.
3) Pumping Schedule: Alternating cycles
4) Ranges in concentration: 20.9 % oxygen; 70% nitrogen (use of ambient air); <0.01% phosphorous. Each component is in the gas phase.
5) Remediation is expected to be completed within two years (24 months).

Attachment D: Monitoring Program

Site monitoring for system effectiveness and progress determination will consist of heterotrophic plate count and Chemical Oxygen Demand (COD) of two wells in the treatment area. These samples will be recovered monthly and will be used as evidence of the remediation progress.

Site monitoring for the chemicals of concern (CoC) will be as dictated in the solicitation SB-6672 and will consist of initial and quarterly monitoring of those wells and surface water identified in Table 3. BTEX, MTBE and Naphthalene will be analyzed using EPA Method 8260 or EPA Method 8021B. Once compliance with the SSTLs is shown due to regular quarterly sampling, SMME will install two additional monitoring points (at DHEC's discretion). The listed sampling points and the additional wells will be monitored for two more quarters (verification monitoring) and will include sampling and analysis for dissolved oxygen, ferrous iron, nitrate and sulfate. SMME anticipates quarterly monitoring for up to one year then two additional quarters of verification monitoring.

Quarterly monitoring will also document the water and product levels in the wells of concern.

Attachment E: Existing or Pending State/Federal Permits

SMME is not aware of any current state or federal permits in connection with this remediation project.

Attachment F: Description of Business

The contaminant source(s) were USTs at the Cross Roads Grocery located at 850 West Oak Highway near Westminster, South Carolina.

Attachment G: Area of Review

The radius used in determination of the potential receptors has not been found. The primary receptor found seems to be a tributary of Beaverdam Creek and an unused private well on the property of Charles and Edna Dowkins which are both directly downgradient of the remediation area.

Attachment H: Maps (Attached)

Attachment J: Name and Depth of Underground Sources of Drinking Water (USDW's)

The local drinking supply comes from the Little River and is supplied by Pioneer Rural Water District. Pioneer purchases treated water from the Towns of Seneca and Westminster. The water used in the local area is purchased from Seneca which draws it from Lake Kewowee. The withdrawl point is approximately 9 miles north of the impacted site.

A private drinking water well owned by Edna and Charles Dockins has been impacted by the contaminant plume. This well is no longer in use. The Dockins are now served by the Pioneer Rural Water District.

Attachment K: Hydraulic Control

Data from site assessment report from Environmental Monitoring Corporation:

$K = 5.41 \times 10^{-5}$ ft/min I = 0.03 ft/ft Ne = 0.05 V = 17.1 ft/year

Design Calculations

Phoster Injection System

Cross Roads Grocery

Oconee County, South Carolina

Chemicals of Concern Reduction

The technology to be used in the reduction of the chemicals of concern will be the PHOSter II™ technology as adapted by Freeman & Vaughn Engineering, Inc. PHOSter II™ is a patented bio-stimulation process that delivers a measured and predetermined combination of phosphorous, nitrogen and oxygen to VOC and/or semi-VOC contaminated soil and groundwater. The volume and mixture of gaseous nutrient, flow rate, pressure and frequency of the pulsed injections are determined by the types and volumes of contaminants of concern.

The gas injection volumes and rates are far below the levels that could induce air sparging. Because nutrients are injected in a mixture of air, the terms "bioventing" (defined as "air slowly injected into the unsaturated soils") and "biosparging" (defined as "air and specific gases injected into saturated sediments"), may be applied to the PHOSter II™ process. Injection points are sealed against air, gases or vaporized contaminates venting to the atmosphere.

The basic PHOSter II™ units are self-contained and housed in a covered metal trailer with lockable double entry doors. The standard unit conforms to all DOT standards for size and weight and are towed by a full size pickup truck or utility vehicle. Once mobilized to the site, the unit will be connected to a 220-volt single phase electrical supply, provided by South Carolina Electric and Gas Company. The poles and meters will be sited with approval from DHEC and the site owner. The proposed trailer and pole locations are shown in Figure 4. The process unit is also equipped with a modem to allow off site monitoring of the system's PLC. The unit will be equipped to inject through twelve separate injection ports.

Figure 4 is provided as a typical injection point. Injection tubing will consist of ½" nominal diameter PEX piping. This tubing is normally used in residential and commercial potable water plumbing. This material can be directly buried. We currently plan to bury all air/nutrient injection lines and the injection well head assemblies.

During operation of the treatment unit, SMME will conduct confirmatory testing to determine the increase in heterotrophic bacteria and decrease in Chemical

Oxygen Demand. Other tests to be conducted during remediation will include, DO concentration and rate of oxygen utilization, pH change and initial and quarterly analysis to quantify the reduction of CoC, as required by DHEC.

Assumed Area of Treatment

Normal running mode is to inject into six points at any given time. Trailer units can handle the injection of a total of twelve points. If we assume one trailer can affect 100,000 sf during one set-up, the time required to remediate and a radius of influence can be estimated.

Rate of Hydrocarbon Decay

The following imperical equation is adapted from Eq. 3-2 of EPA's Bioventing Design Manual:

HC_{bio}= Rate of hydrocarbon decay (kg/day)
K_{DO} = Average rate of DO consumption (10 to 40 %/day)
Q = Air injection rate (8 cfm = 226.5 L/min)
C = Mass ratio of hydrocarbon degraded to oxygen (1/3.5)
ρ_{O2} = Density of oxygen
MW_{O2} = Molecular wt. of oxygen

$HC_{bio} = K_{DO} \times Q \times C \times \rho_{O2} \times MW_{O2} \times 1.44$

$HC_{bio} = 0.10 \times 226.5 \times 1/3.5 \times .042 \times 32 \times 1.44$

$= 10.14$ kg/day

Treatment Time for Critical Zone:

Active treatment zone is assumed to extend to an average depth of 40 below the top of the water table, based on the iso-concentration lines shown in the geologic cross-sections. Active area for one set-up will be 250' by 200'.

Total Volume below WT = 500 x 200 x 25 = 2,500,000 cf

V_{water} = 2,500,000 cf x 0.25 (porosity) x 7.48 gal/cf = 4,675,000 gallons

Time Required = $V_{water} \times C_{ave} \times 3.78$ kg/gal / HC_{bio}

Time Required = 4.675 MG x 100 ppm x 3.78 kg/gal /(10.14 kg/day) = 175 days

Design Radius of Influence(based on oxygen uptake):

R_i = Radius of Influence(ft.)
Q = Injection rate (cf/day)
C_{DOsat} = DO conc. in injection well (% of saturation)
C_{DOx} = DO conc. in untreated well (% of saturation)
h = Depth of treatment zone (ft.)
k_o = Rate of oxygen uptake (10 - 40 %/day)
θ_a = Porosity

$R_i = Sqrt[(Q \times (C_{DOsat} - C_{DOx})/(\pi \times h \times k_o \times \theta_a)]$

$R_i = Sqrt[(11{,}520 \times (110 - 10)/(\pi \times 25 \times 10 \times 0.25)]$

R_i = 76.6 feet

Figure 4 is provided to show the proposed injection well layout. The radius of influence is depicted as 45 feet to be conservative.

COOLER RECEIPT FORM

Client: SCDHEC BC# 209436

Cooler Received On: 11/27/00 And Opened On: 11/27/00 By: Mark Beasley

Mark Beasley
(Signature)

1. Temperature of Cooler when opened 4.0 DEGREES CELSIUS
2. Were custody seals on outside of cooler and intact?.....YES
   a. If yes,what kind and where: TAPE 1 Front
   b. Were the signature and date correct?.....YES
3. Were custody seals on containers intact?.....NO
4. Were custody papers inside cooler?.....YES
5. Were custody papers properly filled out (ink,signed,etc)?.....YES
6. Did you sign the custody papers in the appropriate place?.....YES
7. What kind of packing material was used? Bubblewrap Peanuts Other None
8. Was sufficient ice used (if appropriate)?.....YES
9. Did all bottles arrive in good condition(unbroken)?.....YES
10. Were all bottle labels complete (#,date,signed,pres,etc)?.....YES
11. Did all bottle labels and tags agree with custody papers?.....YES
12. Were correct bottles used for the analysis requested?.....YES
13. If present, was any observable VOA headspace present?.....NO
14. If present, were VOA vials checked for absence of air bubbles and noted if found?.....YES
15. Was sufficient amount of sample sent in each bottle?.....YES
16. Were correct preservatives used?.....YES
17. Was residual chlorine present (if appropriate?).....NO
18. Corrective action taken, if necessary:
    a. Name of person contacted: SEE ATTACHED FOR RESOLUTION IF NEEDED
    b. Date:_____

COOLER RECEIPT FORM

Client: TA - Columbia BC# 263575

Cooler Received On: 12/8/4 And Opened On: 12/8/4 By: Paul Buckingham

(Signature)

1. Temperature of Cooler when opened 1.0 Degrees Celsius
2. Were custody seals on outside of cooler? ..... (YES) NO
   a. If yes, how many, what kind and where: 2 front/side
3. Were custody seals on containers and intact? ..... (NO) YES
4. Were the seals intact, signed, and dated correctly? ..... (YES) NO
5. Were custody papers inside cooler? ..... (YES) NO
6. Were custody papers properly filled out (ink, signed, etc)? ..... (YES) NO
7. Did you sign the custody papers in the appropriate place? ..... (YES) NO
8. What kind of packing material used? (Bubblewrap) Peanuts Vermiculite Other None
9. Was sufficient ice used (if appropriate)? ..... (YES) NO
10. Did all bottles arrive in good condition (unbroken)? ..... (YES) NO
11. Were all bottle labels complete (#, date, signed, pres, etc)? ..... (YES) NO
12. Did all bottle labels and tags agree with custody papers? ..... (YES) NO
13. Were correct bottles used for the analysis requested? ..... (YES) NO
14. a. Were VOA vials received? ..... (YES) NO
    b. Was there any observable head space present in any VOA vial? ..... (NO) YES
15. Was sufficient amount of sample sent in each bottle? ..... (YES) NO
16. Were correct preservatives used? ..... (YES) NO
17. Was residual chlorine present? ..... NO YES ~~NA~~
18. Corrective action taken, if necessary:

See attached for resolution

Subject: Report of Assessment Activities
Crossroads Grocery
8050 West Oak Highway, Westminster, SC
SCDHEC Site ID# 06742, CP # 12832
MECI Project Number 00-328

Dear Mr. Miner,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the following Report of Assessment Activities. The activities and results described in this report are not intended to fully characterize the conditions at the subject site, but should be considered with respect to previous assessment activities performed. This report describes activities conducted at your request.

FIELD EXPLORATION

Seven shallow (water table bracketing) monitoring wells were installed at the site. Each was installed to replace a preexisting well (MW-4, MWR-4, MW-5, MW-7, MW-9, MW-13, and MW-14), which reportedly did not bracket the water table.

MONITORING WELL INSTALLATION

From February 27 through March 1, 2002, seven monitoring wells (MW-4R, MWR-4R, MW-5R, MW-7R, MW-9R, MW-13R and MW-14R) were installed at the site. These wells were installed by American Environmental Drilling Services. (AEDS; SCDHEC License – Kelly Grant # 1568). All replacement monitoring wells were installed using a truck-mounted drilling rig employing a air rotary techniques to construct the boreholes (total footage, 269 feet). Each boring was advanced to the groundwater table. Monitoring wells were then installed to their respective boring depths. See attached Test Boring and Monitoring Well Installation Records for well construction details.

Following completion of all monitoring wells, five were developed by MECI personnel using disposable bailers. These wells were bailed until they were determined to be functioning properly and turbidity was reduced. The development water was drummed and stored on-site for future disposal. Wells MW-4R and MWR-4R were found to have measurable free phase petroleum product. Well MW-4R had a product thickness of 0.02 feet. Well MWR-4R had a product thickness of 0.47 feet.

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

79 tch

SUBSEQUENT SURVEY

Following installation of the replacement monitoring wells, they were surveyed by MECI personnel utilizing a level and rod. The surveyed locations placed MW-4R 100 degrees east of north and approximately 7.38 feet in distance from the preexisting MW-4; MWR-4R is located 85 degrees east of north and approximately 9.70 feet in distance from the preexisting MWR-4; MW-5R is located 165 degrees east of north and approximately 6.80 feet in distance from the preexisting MW-5; MW-7R is located 60 degrees east of north and approximately 3.65 feet in distance from the preexisting MW-7; MW-9R is located 155 degrees east of north and approximately 11.10 feet in distance from the preexisting MW-9; MW-13R is located 20 degrees east of north and approximately 2.95 feet in distance from the preexisting MW-13; and MW-14R is located 90 degrees west of north and approximately 82.10 feet in distance from the preexisting well MW-13 (preexisting MW-14 could not be located). See attached table for top of casing and top of lid elevations (referenced to the assumed site datum see existing site monitoring wells).

WASTEWATER TREATMENT

The drummed purge water was treated on-site by passing through a granular activated carbon unit. A total of one drum of purge/development water was disposed of in this manner. A disposal manifest for the drummed purge water is attached at the end of this report.

SOIL (DRILL CUTTINGS) DISPOSAL

On March 15, 2002, Lexington Earthworks of North, South Carolina, visited the site and removed three drums (0.64 tons) of soils produced during the construction of the seven monitoring wells on the site. The soils were transported to Waste Management/Richland Landfill, Elgin, South Carolina for treatment and disposal. Disposal manifests for these soils are attached.

Midlands Environmental appreciates the opportunity to offer our professional environmental services to you on this project. Please feel free to contact us at 808-2043 if you have any questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Re: Treatment of Purge Water
Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID Number 06742
MECI Project Number 00-328

To Whom it May Concern;

Midlands Environmental Consultants, Inc. is providing the following letter as certification that treatment of the referenced purge water complied with the conditions of "Proposed Conditions for Use of Portable Activated Carbon Units for the Treatment of Small Volumes of Petroleum Hydrocarbon Contaminated Groundwater", as described in the following:

Applicability:

Groundwater treated was obtained as a result development of wells and sampling.

Conditions:

1. The worst-case well analysis was obtained before usage of the Activated Carbon Unit. The worst-case well analysis shows only petroleum hydrocarbon constituents in the purge/bail water. The purge/bail water was containerized on site before treatment for less than 30 days prior to treatment.

2. No free-product was detected in any of the purge water drums.

3. The existing carbon pack will be replaced/reactivated every 5,000 gallons.

4. Record of usage is maintained by Contractor.

5. Any and all recommendations and conditions issued by the Manufacturer have been adhered to.

6. Any and all recommendations and conditions (even on a site by site basis) issued by the SCDHEC must be adhered to.

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

All purge waters were treated on-site using an up-flow treatment drum loaded with 30 pounds of activated carbon. Carbon will be loaded to a maximum of 3 pounds of total organic compounds or 5,000 gallons of development/purge water, whichever occurs first.

One 55-gallon drum was treated on March 4, 2002 at the referenced site

A total of one 55-gallon drum was treated at the referenced site.

Midlands Environmental also tracks cumulative organic compounds adsorbed on the activated carbon to ensure the capacity of carbon mass is not over-charged. This data is available upon request.

Should you have any questions or comments, please contact the undersigned.

Sincerely,
Midlands Environmental Consultants, Inc.

Re: Quarterly Monitoring Report; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Ms. Doran,

As required, Smith Monitoring & Maintenance Engineering, Inc. (SMME) has completed groundwater sampling activities in compliance with condition number 7 of the referenced bid specification. The monitoring wells were sampled on August 26 and 27, 2003.

Static water levels and total well depths were measured to the nearest 0.01 foot, based on top of casing elevations previously established in EMC's assessment of May of 1998. Dissolved oxygen concentrations were measured prior to level measurement and well sampling to minimize errors due to aeration of the water in the well screen.

All wells were purged and sampled with a decontaminated 12-volt DC, low volume, centrifugal pump. The wells were purged until at least one standing well volume had been removed and the pH and temperature of the water had stabilized to within a 10 percent difference. The groundwater sampling parameters for each well were recorded in the attached groundwater sampling field tables.

The groundwater samples were recovered through the use of low-volume pumping. The water sample was then apportioned into the pre-labeled sample containers, which contained the appropriate preservatives according to U.S. EPA standards. Required sample volumes, containers, sample preservatives, and holding times followed guidelines stipulated in Appendix A of the EISOPQAM.

The sample bottles were labeled with all data required by the EISOPQAM and placed in iced containers for storage to maintain not more than 5 degrees Celsius temperature. Static water level measurements and well sampling were conducted in sequence from the least contaminated well to the most contaminated well.

Chain-of-custody procedures used for this assessment conformed to the EISOPQAM, Section 3. The chain-of-custody forms were used to record and document all times and changes of possession of the samples. The chain-of-custody form documents the project name; sample number; name and signature of sample personnel and the field supervisor, the sampling location, date, and collection time, type of sample, container type, sample media, and the number of containers for a given sample.

80 tech

Groundwater elevations (see Groundwater Elevation Table 1), measured prior to groundwater sampling, were used to construct a water table contour map, which is included as Figure 1. Groundwater elevations were calculated by subtracting the depth-to-water measurement from the Top-of-Casing (TOC) elevation previously measured. At this time, the exact gradient is not determinate since the casing elevations for the new wells are unknown. Based upon prior site experience groundwater flow direction is generally toward the south.

Figure 2 shows the benzene isopleth, based on the latest sampling. A summary of recorded sampling events is provided in Table 3: Actual Concentrations. Laboratory analytical data sheets are provided in Attachment I. Table 2: Report Concentrations is provided as a summary of the analytical data using the SSTLs in summing the site score, for billing purposes.

Progress of Corrective Action

The groundwater treatment system, as described in the approved Corrective Action Plan, was installed and started operation on January 11, 2000. Problems due to freezing temperatures caused a temporary shutdown during late January of 2000. The treatment system was shut-down, temporarily, during the fall and winter 2001/2002 due to significant product reoccurrence and injection line destruction due to site clearing activities. System injection lines were repaired and product reduced. Last month a motor start capacitor failed. The capacitor was replaced and the system restarted two weeks ago, September 3rd.

LNAPL has formed in MW-8 and is impacting concentrations in adjacent monitoring wells. This well has no history of product formation. Historically, product was detected in the down-gradient well MWR-1 and in MW-1A during our initial sampling. During the previous year, dramatic reductions in CoC have occurred in MW-8, with the June, 2003 results showing only 20% of the initial sampling, conducted prior to system start-up. The potential for the detected product to be the result of a new release is considered high due to the well's location, adjacent to the active fuel pumps. We request the State sample and type this product.

Should you have any questions, please contact the undersigned.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

Richard B. Smith, P.E.

9/ 6/03 **CASE NARRATIVE**

SMITH MONITOR. & MAIN. ENG.INC 2432
RICHARD SMITH
145 MERRILL AVENUE
DECATUR, GA 30030

This report includes the analytical certificates of analysis for all samples listed below. These samples relate to your project identified below:

Project Name: CROSSROADS
Project Number: .
Laboratory Project Number: 345070.

An executed copy of the chain of custody, the project quality control data, and the sample receipt form are also included as an addendum to this report. Any QC recoveries outside laboratory control limits are flagged individually with an #. Sample specific comments and quality control statements are included in the Laboratory notes section of the analytical report for each sample report. If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-800-765-0980. Any opinions, if expressed, are outside the scope of the Laboratory's accredidation.

Sample Identification	Lab Number	Collection Date

COOLER RECEIPT FORM BC# (2432)

Client: SMITH MONT./RICK SMITH

Cooler Received On: 8/30/03 And Opened On: 8/30/03 By: Ben Wright

(Signature)

1. Temperature of Cooler when opened 3.0 Degrees Celsius
2. Were custody seals on outside of cooler?.....(YES)...NO....NA
   a. If yes, how many, what kind and where: 2-TAPE-FRONT
3. Were custody seals on containers and intact?.....(NO)...YES...NA
4. Were the seals intact, signed, and dated correctly?.....(YES)....NO...NA
5. Were custody papers inside cooler?.....(YES)....NO...NA
6. Were custody papers properly filled out (ink,signed,etc)?.....(YES)....NO...NA
7. Did you sign the custody papers in the appropriate place?.....(YES)...NO...NA
8. What kind of packing material used? (Bubblewrap) Peanuts Vermiculite Other None
9. Was sufficient ice used (if appropriate)?.....(YES)..NO...NA
10. Did all containers arrive in good condition(unbroken)?.....(YES)..NO...NA
11. Were all container labels complete (#,date,signed,pres,etc)?.....(YES)..NO...NA
12. Did all container labels and tags agree with custody papers?.....(YES)..NO...NA
13. Were correct containers used for the analysis requested?.....(YES)..NO...NA
14. a. Were VOA vials received?.....(YES)..NO...NA
    b. Was there any observable head space present in any VOA vial?.....(NO)..YES...NA
15. Was sufficient amount of sample sent in each container?.....(YES)...NO...NA
16. Were correct preservatives used?.....(YES)..NO...NA
    If not, record standard ID of preservative used here_____
17. Was residual chlorine present?.....NO...YES...(NA)
18. See attached for resolution of non-conformance:

December 17, 2003

Karen Doran, Project Manager
SCDHEC, UST Program
2600 Bull St.
Columbia, SC 29201

Dear Ms. Doran:

Included are the results from the additional testing of material submitted on October 2, 2003 from the 06742, F&BI 310020 project.

The additional testing completed at Friedman and Bruya, Inc. (F&BI) included testing of the sample MW-8 for paraffin, isoparaffin, aromatice, naphthene, and olefin (PIANO) constituents using a modification of ASTM Method D5134-92. This method has been modified to include the use of a mass spectrometer and has been extended to include the analysis of a wider boiling range of compounds. The results of this testing are also enclosed.

In addition, as requested, we have reviewed the reports issued by F&BI on June 14, 2002 and October 23, 2003. These reports consisted of analytical data generated for the product samples MW-8, MWR-1, and MWR-4R. The purpose of this review was to provide a comparison of the material found in the samples MW-8, MWR-1, and MWR-4R. Our findings are provided below.

Based on the data generated, the material present in the samples MW-8, MWR-1, and MWR-4R is indicative of gasoline. The general composition of this material indicates that the gasoline present in these samples has undergone little to no degradation. It should also be noted that the samples contained the oxygenate methyl *t*-butyl ether (MTBE). The sample MW-8 also appeared to contain the organometallic additive methylcyclopentadienyl manganese tricarbonyl (MMT), which became available in 1958 and was phased out of use by the mid-1990's.

The results for selected constituents from the PIANO analysis of the samples MW-8, MWR-1, and MWR-4R are provided in Table 1. For comparison, included in

81 tech

Table 1 are levels of *n*-butane, *n*-pentane, isooctane, benzene, toluene, ethylbenzene, and the xylenes in a "Typical" undegraded gasoline. [1]

Table 1. Selected Constituents from the PIANO Analysis (w/w%)

Sample ID	Date Analyzed	*n*-Butane	*n*-Pentane	Isooctane	Benzene	Toluene	Ethyl-benzene	Xylenes
MW-8	11/22/03	0.21	0.79	4.5	1.4	5.7	2.0	8.7
MWR-1	06/05/02	0.78	1.4	2.3	0.93	4.9	1.7	7.4
MWR-4R	06/05/02	1.2	1.7	2.4	0.99	4.6	1.6	6.9
Typical		3.9-4.7	5.8-10.9	0.32-4.6	0.12-3.5	2.7-22	0.36-2.9	3.2-8.3

As shown in Table 1, the highly volatile constituents *n*-butane and *n*-pentane were identified in the sample MW-8. When fuel is released to the environment these highly volatile constituents readily migrate away from the source area and become dispersed. The presence of these constituents in the sample MW-8 indicates that some of the gasoline present could be due to an ongoing release.

Comparison of the results of samples previously taken at the site, however, shows that the *n*-butane level at the site has historically been three times that present in the sample MW-8. This suggests that the *n*-butane found at this location could also be due to a historic release.

Continued monitoring at the MW-8 location is recommended using the PIANO analysis. This data can be used to measure the rate loss of specific constituents, such as *n*-butane, at the site. This information may be useful in further characterizing the period of release of the fuel present.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Kurt Johnson, Chemist

October 23, 2003

Karen Doran, Project Manager
SCDHEC, UST Program
2600 Bull St.
Columbia, SC 29201

Dear Ms. Doran:

Included are the results from the testing of material submitted on October 2, 2003 from the 06742, F&BI 310020 project. The product and product/water samples submitted for forensic evaluation arrived in good condition. Upon arrival, the samples MW-8 and MW-1R were placed in a refrigerator maintained at 4°C until removed for sample processing.

The samples MW-8 and MW-1R were extracted and analyzed using a gas chromatograph with a flame ionization detector (GC/FID) and an electron capture detector (ECD). The data generated yielded information on the boiling range and general chemical composition of the material present. The GC/FID and GC/ECD traces are enclosed. A GC/FID trace of a standard consisting of normal alkanes is also provided for reference purposes.

As requested, we have also reviewed the report issued by Friedman and Bruya, Inc. (F&B) on June 14, 2002 regarding your Hot Spot 2040, #06742 project. This report consisted of analytical results generated for the product samples MWR-1 and MWR-4. The purpose of this review was to provide a comparison of the material present in the samples MW-8, MW-1R and in the samples MWR-1 and MWR-4.

Based on the data generated, the material present in the samples MW-8, MW-1R, MWR-1, and MWR-4 is consistent with gasoline. The general chemical composition of this fuel indicates that it has undergone little to no degradation. Under the site conditions provided, we estimate that the extent of degradation in this fuel is consistent with releases that occurred within the last 10 years.

It should also be noted that the organic manganese additive methylcyclopentadienyl manganese tricarbonyl (MMT) was tentatively identified in the sample MW-8. This additive became available in 1958 and was phased out use by the mid-1990's. The

apparent presence of MMT indicates that at least a portion of the fuel present in the sample MW-8 may be related to a historic release or releases. Additional tests are available to confirm the presence of and quantify this analyte, if warranted.

In order to provide a comparison of the detailed chemical composition of the material present in the samples, we recommend the GC/MS testing of the samples MW-8 and MW-1R for paraffin, isoparaffin, aromatic, naphthene, and olefin (PIANO) constituents using a modification of ASTM Method D5134-92. We also recommend continued monitoring at MW-8, MW-1R, MWR-1, and MWR-4 locations using the PIANO analysis. This data can be used to measure the rate loss of specific constituents, such as *n*-butane, at the site. This information may be useful in further characterizing the period of release of the fuel present.

Please contact us if additional consultation is needed by our firm in the interpretation of the analytical results provided. We appreciate this opportunity to be of service to you and hope you will call if you should have any questions. We will hold your samples for 30 days before disposal unless directed otherwise.

Sincerely,

FRIEDMAN & BRUYA, INC.

Kurt Johnson

RESULTS FROM THE ANALYSIS OF THE PRODUCT SAMPLE FOR FORENSIC EVALUATION BY CAPILLARY GAS CHROMATOGRAPHY USING A FLAME IONIZATION DETECTOR (FID) AND ELECTRON CAPTURE DETECTOR (ECD)

Sample ID	GC Characterization
MW-8	The GC trace using the flame ionization detector (FID) showed the presence of low boiling compounds. The patterns displayed by these peaks are indicative of gasoline. The low boiling compounds appear as a ragged pattern of peaks eluting from *n*-C_7 to *n*-C_{13} showing a maximum near *n*-C_8. This correlates with a temperature range of approximately 100°C to 240°C with a maximum near 130°C. Within this range, the GC/FID trace showed the presence of peaks, at varying levels, that are indicative of toluene, ethylbenzene, the xylenes, C3-benzenes, and methylnaphthalenes. These compounds are characteristic of the constituents commonly found in gasoline. The relative abundance of the volatile and semivolatile constituents present indicates that little to no degradation has occurred to the fuel. The GC/ECD trace of the sample MW-8 shows the presence of a single peak eluting before 12 minutes. The retention time of this peak indicates that the organic manganese additive methylcyclopentadienyl manganese tricarbonyl (MMT) may also be present in the sample. The large peak seen near 25 minutes on the GC/FID trace is pentacosane, added as a quality assurance check for this GC analysis. There is a second surrogate present that is seen on the GC/ECD trace at about 26 minutes which is dibutyl chlorendate.

Debra Thoma, Project Manager
TestAmerica
9440 B Two Notch Rd.
Columbia, SC 29223

Dear Ms. Thoma:

Included are the results from the testing of material submitted on May 31, 2002 from your Hot Spot 2040, #06742 project. The product samples submitted for forensic evaluation arrived in good condition. Upon their arrival, the samples MWR-1 and MWR-4R were assigned our laboratory project number 205250 and were placed in a refrigerator maintained at 4°C until removed for sample processing.

The samples MWR-1 and MWR-4R were diluted and analyzed using a gas chromatograph with a flame ionization detector (GC/FID) and an electron capture detector (ECD). The data generated yielded information on the boiling range and general chemical composition of the material present. The GC/FID and GC/ECD traces are enclosed. A GC/FID trace of a standard consisting of normal alkanes is also provided for reference purposes.

In addition, the samples MWR-1 and MWR-4R were analyzed for paraffin, isoparaffin, aromatic, naphthene, and olefin (PIANO) constituents using a modification of ASTM Method D5134-92. This method has been modified to include the use of a mass spectrometer and has been extended to include the analysis of a wider boiling range of compounds. The results of this testing are also enclosed.

The results for selected constituents from the PIANO analysis of the MWR-1 and MWR-4R are provided in Table 1. For comparison, included in Table 1 are levels of *n*-butane, *n*-pentane, isooctane, benzene, toluene, ethylbenzene, and the xylenes in a "Typical" undegraded gasoline.[1] It should also be noted that the results indicate that the samples MWR-1 and MWR-4R contain the ether MTBE at 0.05% and 0.03% (w/w), respectively.

[1] "Selection of Representative TPH Fractions Based on Fate and Transport Considerations - Total Petroleum Hydrocarbon Criteria Working Group Series Volume 3", J.B. Gustafson, J.G. Tell and D. Orem, Amherst Scientific Publishers, Amherst, MA, 1997, ISBN 1-884-940-12-9

Table 1. Selected Constituents from the PIANO Analysis (w/w%)

Sample ID	*n*-Butane	*n*-Pentane	Isooctane	Benzene	Toluene	Ethylbenzene	Xylenes
MWR-1	0.78	1.4	2.3	0.93	4.9	1.7	7.4
MWR-4R	1.2	1.7	2.4	0.99	4.6	1.6	6.9
Typical	3.9-4.7	5.8-10.9	0.32-4.6	0.12-3.5	2.7-22	0.36-2.9	3.2-8.3

As shown in Table 1, the samples MWR-1 and MWR-4R contain *n*-butane at 0.78% and 1.2% (w/w), respectively, and *n*-pentane at 1.4% and 1.7% (w/w), respectively. The presence of these highly volatile constituents in the samples MWR-1 and MWR-4R indicates that at least a portion of the gasoline present is relatively undegraded. Under a moderate to moderately low rate of weathering, this level of degradation is characteristic of releases which occurred within the last 10 years.

Please contact us if additional consultation is needed by our firm in the interpretation of the analytical results provided. We appreciate this opportunity to be of service to you and hope you will call if you should have any questions. We will hold your samples for 30 days before disposal unless directed otherwise.

Sincerely,

FRIEDMAN & BRUYA, INC.

UNDERGROUND STORAGE
TANK PROGRAM

Re: Quarterly Monitoring Report; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Ms. Doran,

As required, Smith Monitoring & Maintenance Engineering, Inc. (SMME) has completed groundwater sampling activities in compliance with condition number 7 of the referenced bid specification. The monitoring wells were sampled on June 16, 2004.

Static water levels and total well depths were measured to the nearest 0.01 foot, based on top of casing elevations previously established in EMC's assessment of May of 1998. Dissolved oxygen concentrations were measured prior to level measurement and well sampling to minimize errors due to aeration of the water in the well screen.

All wells were purged and sampled with a decontaminated 12-volt DC, low volume, centrifugal pump. The wells were purged until at least one standing well volume had been removed and the pH and temperature of the water had stabilized to within a 10 percent difference. The groundwater sampling parameters for each well were recorded in the attached groundwater sampling field tables.

The groundwater samples were recovered through the use of low-volume pumping. The water sample was then apportioned into the pre-labeled sample containers, which contained the appropriate preservatives according to U.S. EPA standards. Required sample volumes, containers, sample preservatives, and holding times followed guidelines stipulated in Appendix A of the EISOPQAM.

The sample bottles were labeled with all data required by the EISOPQAM and placed in iced containers for storage to maintain not more than 5 degrees Celsius temperature. Static water level measurements and well sampling were conducted in sequence from the least contaminated well to the most contaminated well.

Chain-of-custody procedures used for this assessment conformed to the EISOPQAM, Section 3. The chain-of-custody forms were used to record and document all times and changes of possession of the samples. The chain-of-custody form documents the project name; sample number; name and signature of sample personnel and the field supervisor, the sampling location, date, and collection time, type of sample, container type, sample media, and the number of containers for a given sample.

82-tch

Groundwater elevations (see Groundwater Elevation Table 1), measured prior to groundwater sampling, were used to construct a water table contour map, which is included as Figure 1. Groundwater elevations were calculated by subtracting the depth-to-water measurement from the Top-of-Casing (TOC) elevation previously measured. At this time, the exact gradient is not determinate since the casing elevations for the new wells are unknown. Based upon prior site experience groundwater flow direction is generally toward the south.

Figure 2 shows the benzene isopleth, based on the latest sampling. A summary of recorded sampling events is provided in Table 3: Actual Concentrations. Laboratory analytical data sheets are provided in Attachment I. Table 2: Report Concentrations is provided as a summary of the analytical data using the SSTLs in summing the site score, for billing purposes.

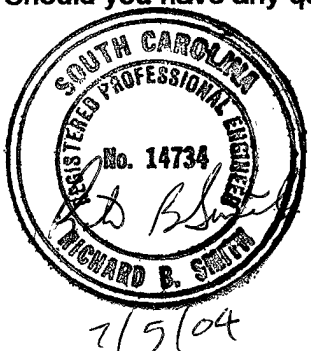
Progress of Corrective Action

The groundwater treatment system, as described in the approved Corrective Action Plan, was installed and started operation on January 11, 2000. Problems due to freezing temperatures caused a temporary shutdown during late January of 2000. The treatment system was shut-down, temporarily, during the fall and winter 2001/2002 due to significant product reoccurrence and injection line destruction due to site clearing activities. System injection lines were repaired and product reduced.

SMME is awaiting guidance from the Regulatory Section concerning the source of the product found at MW-8 and impacting the remediation of the site. The biostimulation trailer has been shut-down since type of process is not effective on such significant quantities of product. The system has been removed from the site and returned to Savannah for repairs and modifications.

We are currently reviewing options to recover the vast amounts of floating product now found on the site. Since testing by DHEC has found that the product formation is from a new source, SMME will wait until the contaminant source is determined and repaired. Product measurements can then be taken and a quantity estimated prior to providing DHEC with the costs associated with product recovery and additional site treatment.

Should you have any questions, please contact the undersigned.



Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

CASE NARRATIVE

SMITH MONITOR. & MAIN. ENG.INC 2432
RICHARD SMITH
145 MERRILL AVENUE
DECATUR, GA 30030

This report includes the analytical certificates of analysis for all samples listed below. These samples relate to your project identified below:

Project Name: OCONEE CO.
Project Number: .
Laboratory Project Number: 379221.

An executed copy of the chain of custody, the project quality control data, and the sample receipt form are also included as an addendum to this report. Any QC recoveries outside laboratory control limits are flagged individually with an #. Sample specific comments and quality control statements are included in the Laboratory notes section of the analytical report for each sample report. If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-800-765-0980. Any opinions, if expressed, are outside the scope of the Laboratory's accredidation.

Sample Identification	Lab Number	Collection Date
MW-10	04-A93205	6/14/04

Re: Quarterly Monitoring Report; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Ms. Doran,

As required, Smith Monitoring & Maintenance Engineering, Inc. (SMME) has completed groundwater sampling activities in compliance with condition number 7 of the referenced bid specification. The monitoring wells were sampled on June 16, 2004.

Static water levels and total well depths were measured to the nearest 0.01 foot, based on top of casing elevations previously established in EMC's assessment of May of 1998. Dissolved oxygen concentrations were measured prior to level measurement and well sampling to minimize errors due to aeration of the water in the well screen.

All wells were purged and sampled with a decontaminated 12-volt DC, low volume, centrifugal pump. The wells were purged until at least one standing well volume had been removed and the pH and temperature of the water had stabilized to within a 10 percent difference. The groundwater sampling parameters for each well were recorded in the attached groundwater sampling field tables.

The groundwater samples were recovered through the use of low-volume pumping. The water sample was then apportioned into the pre-labeled sample containers, which contained the appropriate preservatives according to U.S. EPA standards. Required sample volumes, containers, sample preservatives, and holding times followed guidelines stipulated in Appendix A of the EISOPQAM.

The sample bottles were labeled with all data required by the EISOPQAM and placed in iced containers for storage to maintain not more than 5 degrees Celsius temperature. Static water level measurements and well sampling were conducted in sequence from the least contaminated well to the most contaminated well.

Chain-of-custody procedures used for this assessment conformed to the EISOPQAM, Section 3. The chain-of-custody forms were used to record and document all times and changes of possession of the samples. The chain-of-custody form documents the project name; sample number; name and signature of sample personnel and the field supervisor, the sampling location, date, and collection time, type of sample, container type, sample media, and the number of containers for a given sample.

83 tech

Groundwater elevations (see Groundwater Elevation Table 1), measured prior to groundwater sampling, were used to construct a water table contour map, which is included as Figure 1. Groundwater elevations were calculated by subtracting the depth-to-water measurement from the Top-of-Casing (TOC) elevation previously measured. At this time, the exact gradient is not determinate since the casing elevations for the new wells are unknown. Based upon prior site experience groundwater flow direction is generally toward the south.

Figure 2 shows the benzene isopleth, based on the latest sampling. A summary of recorded sampling events is provided in Table 3: Actual Concentrations. Laboratory analytical data sheets are provided in Attachment I. Table 2: Report Concentrations is provided as a summary of the analytical data using the SSTLs in summing the site score, for billing purposes.

Progress of Corrective Action

The groundwater treatment system, as described in the approved Corrective Action Plan, was installed and started operation on January 11, 2000. Problems due to freezing temperatures caused a temporary shutdown during late January of 2000. The treatment system was shut-down, temporarily, during the fall and winter 2001/2002 due to significant product reoccurrence and injection line destruction due to site clearing activities. System injection lines were repaired and product reduced.

SMME is awaiting guidance from the Regulatory Section concerning the source of the product found at MW-8 and impacting the remediation of the site. The biostimulation trailer has been shut-down since this type of process is not effective on such significant quantities of product. The system has been removed from the site and returned to Savannah for repairs and modifications.

We are currently reviewing options to recover the vast amounts of floating product now found on the site. Since testing by DHEC has found that the product formation is from a new source, SMME will wait until the contaminant source is determined and repaired. Product measurements can then be taken and a quantity estimated prior to providing DHEC with the costs associated with product recovery and additional site treatment.

Should you have any questions, please contact the undersigned.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

Re: Quarterly Monitoring Report; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Mr. Padgett,

As required, Smith Monitoring & Maintenance Engineering, Inc. (SMME) has completed groundwater sampling activities in compliance with condition number 7 of the referenced bid specification. The monitoring wells were sampled on October 21, 2004.

Static water levels and total well depths were measured to the nearest 0.01-foot, based on top of casing elevations previously established in EMC's assessment of May of 1998. Dissolved oxygen concentrations were measured prior to level measurement and well sampling to minimize errors due to aeration of the water in the well screen.

All wells were purged and sampled with a decontaminated 12-volt DC, low volume, centrifugal pump. The wells were purged until at least one standing well volume had been removed and the pH and temperature of the water had stabilized to within a 10 percent difference. The groundwater sampling parameters for each well were recorded in the attached groundwater sampling field tables.

The groundwater samples were recovered through the use of low-volume pumping. The water sample was then apportioned into the pre-labeled sample containers, which contained the appropriate preservatives according to U.S. EPA standards. Required sample volumes, containers, sample preservatives, and holding times followed guidelines stipulated in Appendix A of the EISOPQAM.

The sample bottles were labeled with all data required by the EISOPQAM and placed in iced containers for storage to maintain not more than 5 degrees Celsius temperature. Static water level measurements and well sampling were conducted in sequence from the least contaminated well to the most contaminated well.

Chain-of-custody procedures used for this assessment conformed to the EISOPQAM, Section 3. The chain-of-custody forms were used to record and document all times and changes of possession of the samples. The chain-of-custody form documents the project name; sample number; name and signature of sample personnel and the field supervisor, the sampling location, date, and collection time, type of sample, container type, sample media, and the number of containers for a given sample.

84 tech

Groundwater elevations (see Groundwater Elevation Table 1), measured prior to groundwater sampling, were used to construct a water table contour map, which is included as Figure 1. Groundwater elevations were calculated by subtracting the depth-to-water measurement from the Top-of-Casing (TOC) elevation previously measured. At this time, the exact gradient is not determinate since the casing elevations for the new wells are unknown. Based upon prior site experience groundwater flow direction is generally toward the south.

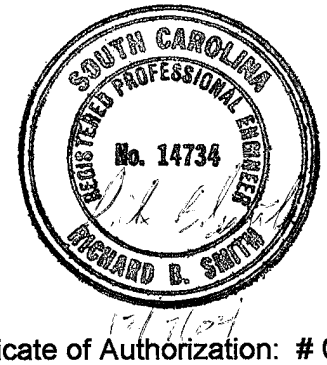
Figure 2 shows the benzene isopleth, based on the latest sampling. A summary of recorded sampling events is provided in Table 3: Actual Concentrations. A laboratory analytical data summary sheet is provided in Attachment I. The lab's final report will be forwarded, separately, when it becomes available. Table 2: Report Concentrations is provided as a summary of the analytical data using the SSTLs in summing the site score, for billing purposes.

Progress of Corrective Action

The groundwater treatment system, as described in the approved Corrective Action Plan, was installed and started operation on January 11, 2000. Problems due to freezing temperatures caused a temporary shutdown during late January of 2000. The treatment system was shutdown, temporarily, during the fall and winter 2001/2002 due to significant product reoccurrence and injection line destruction due to site clearing activities. System injection lines were repaired and product reduced.

Product gauging has again indicated a significant increase in product volume. Original product thickness stated in our contract was 0.05' at MW-4 and 2.49' in MW-8. SMME conducted two vacuum recovery events, early during the corrective action. Although, no data still exists concerning the amount of product recovered, most recoveries have amassed 150 to 250 gallons of fuel. So, over the two events we probably recovered 300 to 500 gallons, total. Following these events, the site was sampled by SMME and samples split with a representative of SCDHEC. This sampling confirmed the removal of product and SMME billed and was paid for a total of 75% of the contract amount. Shortly thereafter, product began to reoccur in MWR-1 and MWR-4 (none detected in MW-8). Since both of these wells were hydraulically down gradient of the known source area, there was reason, at that time, to suspect an additional release. SMME purchased and installed two product recovery pumps. This effort removed approximately 200 gallons of product. The primary issue, at this time, is the reoccurrence of product in MW-8, which is the most up gradient well on the site and closest to the fueling operation. The last measurement taken, in this well, indicated product at 32.80' from top of casing and no water tone before intercepting the well bottom at 43.0'. Therefore, MW-8 currently contains four times the product thickness originally contracted. Continued corrective action at this site will require additional efforts to locate the source of the additional fuel and long-term product recovery. This is well beyond the scope of the State's contract with this firm.

Should you have any questions, please contact the undersigned.



Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

Re: Apparent Evidence on Additional Release; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Ms. Gardner,

This letter is provided to summarize the rationale for the determination of a new or continued release at the subject site.

During our previous meeting concerning this subject, the State focused on claims that the laboratory results for dating the product were irrelevant. I mentioned, towards the end of this meeting, that product thickness exceeded the initial thickness stated in the RFQ (see attached excerpt) from which SMME prepared its bid. As can be seen in the attached report, current product thickness now exceeds four times the original amounts stated in the RFQ.

SMME has acted with diligence on this site. We have conducted two vacuum recovery events and purchased and installed two product pumps. Together, these efforts netted about 700 gallons of fuel. Representatives of DHEC confirmed the absence of product on this site prior to SMME getting paid 75% of the contract amount, in 2001, by taking split samples.

SMME understands that the State has conducted site inspections and reviewed tank-testing data attempting to confirm that there is no apparent new source. The evidence to the contrary is clear. Whether or not the State has the ability to locate the source does not conclusively prove that it does not exist. Product continues to accumulate in the up-gradient, original source area in volumes exceeding the RFQ.

Should you have any questions, please contact the undersigned.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

Initial Mass above SSTL	524,212	597,233	534,141	186,623	10,439,370	12,534	12,294,113

* CoC mass may change due to seasonal fluctuations in the groundwater

**Contains free phase product (MW-4 - 0.05 feet, MW- 8 - 2.49 feet), initial mass based on Henry's Law solubility limits.

(1) 25 percent total mass reduction will be achieved when free product has been removed to .01 foot from MW-1, MW-4, MW-6, and MW-8, and one-quarter of the initial BTEX, MTBE, and Naphthalene mass from monitoring wells MW- 1, MW-1A, MW-2, MW-4, MW-6, MW-7, MW-8, MW-11, MW-13, and MW-14 is removed as compared to the SSTLs. The following formula will be used to calculate the percent total mass reduction: total mass above SSTLs from initial sampling less total mass above SSTLs from subsequent sampling divided by total mass above SSTLs from initial sampling. Payment of 10 percent (10%) of the total bid price will be made upon verification (see Specifications item 10 for the method of verification) of at least one-quarter of the total CoC mass above SSTLs is removed.

Re: Quarterly Monitoring Report; Site #06742
Cross Roads Grocery; Oconee County, South Carolina

Dear Mr. Padgett,

As required, Smith Monitoring & Maintenance Engineering, Inc. (SMME) has completed groundwater sampling activities in compliance with condition number 7 of the referenced bid specification. The monitoring wells were sampled on October 21, 2004.

Static water levels and total well depths were measured to the nearest 0.01-foot, based on top of casing elevations previously established in EMC's assessment of May of 1998. Dissolved oxygen concentrations were measured prior to level measurement and well sampling to minimize errors due to aeration of the water in the well screen.

All wells were purged and sampled with a decontaminated 12-volt DC, low volume, centrifugal pump. The wells were purged until at least one standing well volume had been removed and the pH and temperature of the water had stabilized to within a 10 percent difference. The groundwater sampling parameters for each well were recorded in the attached groundwater sampling field tables.

The groundwater samples were recovered through the use of low-volume pumping. The water sample was then apportioned into the pre-labeled sample containers, which contained the appropriate preservatives according to U.S. EPA standards. Required sample volumes, containers, sample preservatives, and holding times followed guidelines stipulated in Appendix A of the EISOPQAM.

The sample bottles were labeled with all data required by the EISOPQAM and placed in iced containers for storage to maintain not more than 5 degrees Celsius temperature. Static water level measurements and well sampling were conducted in sequence from the least contaminated well to the most contaminated well.

Chain-of-custody procedures used for this assessment conformed to the EISOPQAM, Section 3. The chain-of-custody forms were used to record and document all times and changes of possession of the samples. The chain-of-custody form documents the project name; sample number; name and signature of sample personnel and the field supervisor, the sampling location, date, and collection time, type of sample, container type, sample media, and the number of containers for a given sample.

Groundwater elevations (see Groundwater Elevation Table 1), measured prior to groundwater sampling, were used to construct a water table contour map, which is included as Figure 1. Groundwater elevations were calculated by subtracting the depth-to-water measurement from the Top-of-Casing (TOC) elevation previously measured. At this time, the exact gradient is not determinate since the casing elevations for the new wells are unknown. Based upon prior site experience groundwater flow direction is generally toward the south.

Figure 2 shows the benzene isopleth, based on the latest sampling. A summary of recorded sampling events is provided in Table 3: Actual Concentrations. A laboratory analytical data summary sheet is provided in Attachment I. The lab's final report will be forwarded, separately, when it becomes available. Table 2: Report Concentrations is provided as a summary of the analytical data using the SSTLs in summing the site score, for billing purposes.

Progress of Corrective Action

The groundwater treatment system, as described in the approved Corrective Action Plan, was installed and started operation on January 11, 2000. Problems due to freezing temperatures caused a temporary shutdown during late January of 2000. The treatment system was shutdown, temporarily, during the fall and winter 2001/2002 due to significant product reoccurrence and injection line destruction due to site clearing activities. System injection lines were repaired and product reduced.

Product gauging has again indicated a significant increase in product volume. Original product thickness stated in our contract was 0.05' at MW-4 and 2.49' in MW-8. SMME conducted two vacuum recovery events, early during the corrective action. Although, no data still exists concerning the amount of product recovered, most recoveries have amassed 150 to 250 gallons of fuel. So, over the two events we probably recovered 300 to 500 gallons, total. Following these events, the site was sampled by SMME and samples split with a representative of SCDHEC. This sampling confirmed the removal of product and SMME billed and was paid for a total of 75% of the contract amount. Shortly thereafter, product began to reoccur in MWR-1 and MWR-4 (none detected in MW-8). Since both of these wells were hydraulically down gradient of the known source area, there was reason, at that time, to suspect an additional release. SMME purchased and installed two product recovery pumps. This effort removed approximately 200 gallons of product. The primary issue, at this time, is the reoccurrence of product in MW-8, which is the most up gradient well on the site and closest to the fueling operation. The last measurement taken, in this well, indicated product at 32.80' from top of casing and no water tone before intercepting the well bottom at 43.0'. Therefore, MW-8 currently contains four times the product thickness originally contracted. Continued corrective action at this site will require additional efforts to locate the source of the additional fuel and long-term product recovery. This is well beyond the scope of the State's contract with this firm.

Should you have any questions, please contact the undersigned.

Sincerely,
Smith Monitoring & Maintenance Engineering, Inc.

Subject: Aggressive Fluid Vapor Recovery Report
Former Crossroads Grocery
Westminster, South Carolina
SCDHEC Site ID #06742; CA #25711
MECI Project Number 05-755

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

Prior to initiation of the Aggressive Fluid Vapor Recovery (AFVR) event conducted by MECI, free phase petroleum product was detected in monitoring wells MWR-1, and MW-8. An aggressive fluid vapor recovery event was conducted on monitoring wells MWR-1 and MW-8 to reduce free phase product concentrations. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. The AFVR event was conducted for a total of 8 hours on December 12, 2005. Free phase petroleum product was not detected in MWR-1, but 0.01 inches was detected in well MW-8 immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 111.08 pounds or approximately 19.19 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 13.88 pounds per hour. Concentrations of off gas produced during the event were recorded at 10,000 parts per million by volume (PPM) for the entire event. These readings were taken before vapors entered the off gas treatment system. Vacuum readings were recorded ranging from 18.0 to 22.0 inches of mercury for the entire event. A complete compilation of measurements recorded is presented in attached Table 1.

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

86 tech

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2. Monitoring well locations are depicted on Figure 3.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report is intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

MECI Project Number 05-755

Dear Mr. Padgett,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

Prior to initiation of the Aggressive Fluid Vapor Recovery (AFVR) event conducted by MECI, free phase petroleum product was detected in monitoring wells MWR-4, and MWR-4R. An aggressive fluid vapor recovery event was conducted on monitoring wells MWR-4 and MWR-4R to reduce CoC concentrations. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. The AFVR event was conducted for a total of 8 hours on December 13, 2005. Free phase petroleum product was not detected in either well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 28.26 pounds or approximately 4.88 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 3.53 pounds per hour. Concentrations of off gas produced during the event were recorded ranging from 10,000 to 150 parts per million by volume (PPM) throughout the entire event. These readings were taken before vapors entered the off gas treatment system. Vacuum readings were recorded at 18.0 inches of mercury for the entire event. A complete compilation of measurements recorded is presented in attached Table 1.

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2. Monitoring well locations are depicted on Figure 3.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report is intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.

Lyle Lee
Staff Geologist

Bryan T. Shane, P.G.

Membrane Interface Probing and Direct Push Proposal
Site: Crossroads Grocery #06742

Dear Joel:

Thank you for the opportunity to present our approach for meeting your objectives in a safe and timely manner. We understand that you would like a firm that you can depend on to get the job done right and to provide the most cost-effective solution for your site.

Your Objectives: We understand that you would like to:

1. Complete this investigation and *eliminate data gaps* in just one more field effort
2. Delineate the nature and extent of free product
3. Collect samples that are representative of specific subsurface hydrogeologic units.

Our Approach: To accomplish these goals in a single site visit, COLUMBIA Technologies will:

1. Customize a direct sensing system to meet your specific site needs
2. Optimize this system as we gain specific results from your site
3. Post all results on a secure website each day
4. Incorporate all relevant data into a high-definition, 3D image of the subsurface

Benefits* to South Carolina DHEC from *teaming with COLUMBIA Technologies

1. **Daily Posting of Results** - Allows for timely review of data and helps direct field efforts
2. **COLUMBIA'S Experience** – We are the most experienced MIP firm in the nation and offer our expertise to aid field performance, data interpretation and reporting. We have the largest MIP database in the world.
3. ***SmartData Solutions®*** - Provides data processing, QA, and 2D/3D images of CSM

We hope you find this proposal of value. Thank you for the opportunity to provide our technical services to your firm. Please let me know if I can be of any additional assistance.

Sincerely,

Ned Tillman
President

88 kch

Per telephone conversation w/ Ned Tillman 6/8/06, Columbia was to obtain SC contractor certification. Certification necessary for plan approval. Sent e-mail (ntillman@columbiatechnologies.com) requesting status 8/17/06. No response. Project transferred to Assessment Section 11/16/06 for FP delineation.

JPP
11/16/06

PROPOSAL FOR TECHNICAL SERVICES

Background

You have invited COLUMBIA Technologies, LLC, a ***Veteran-owned, small business*** concern (NAICS 541690, 562910, 541380, 235810), to provide a Proposal for services. COLUMBIA Technologies is not just a technology vendor. We convert our data into knowledge with our SmartData Solutions® process. This allows you to reduce your costs while improving your outcomes. We are a:

1. ***Experienced Triad practitioner*** – experienced on EPA and privately funded projects
2. ***Leading expert in real-time measurement tools*** – 5 years and 300 MIP projects
3. ***Provider of SmartData Solutions®*** – for real-time data management and visualization

Scope of Services

You require a dependable and experienced firm to provide on site services for achieving your client's goals. Our staff at COLUMBIA brings an excellent safety record and years of experience to fully understand your needs and provide you with a complete and reliable product in a useable format.

To accomplish this, COLUMBIA will provide:

1. A State-of-the-art ***SmartMIP*** probing system and lab grade GC equipped with a ECD/PID/FID to optimize your understanding of the subsurface contamination. This system will provide you with detailed logs of the subsurface lithology and contamination immediately at the end of each hole.

2. Electrical Conductivity Logging for profiling soil types.

3. Temperature Logging for locating top of the groundwater table and hydrologic units.

4. Fully equipped, direct push sampling rig to collect soil and water samples.

5. The **SmartData Solutions®** approach to collecting, reviewing, processing and presenting the data as easy to understand 3D images. This will enable you to learn more versus using just the Raw Data.

Field Procedures

Your firm expects a partner that follows tightly written and approved Standard Operating Procedures. The Proposal and Cost Estimate are based on information provided by your staff, and assumes reasonable access to the survey areas for the personnel and equipment to be used. COLUMBIA follows strict protocols in the collection of soil, water and direct sensing data from the subsurface. These protocols are essential for obtaining both reliable and

representative samples of the subsurface. Our methods are designed to limit carryover of contamination and dilution of the sample. We will follow strict decontamination procedures.

Enhanced Membrane Interface Probing

COLUMBIA will conduct vertical profiling at the site using a Membrane Interface Probe complete with an Electrical Conductivity Sensor. The combined MIP/EC tool will be pushed into the ground collecting continuous data from the surface to the target depth or refusal. The logs generated will reveal both the soil types as well as the location of any contaminant detected. The MIP system heats the soil and water up to 250 degrees and analyzes the resultant volatiles with PID, FID and ECD detectors. The results can be used to develop a conceptual model for the site and more accurately locate the best depths for sampling.

Reporting

COLUMBIA provides the following key elements for processing and communication our results:

Secure Project Specific Website – We will create a Project Web-site for you so we can post the site map, historical data and all the data we collect on this web-site for easy referenced during the field investigation.

Daily Posting of MIP Results to - We will provide you with logs of each location at the end of each hole and will post these logs on a secured web page on a real time so your technical team and our experts can discuss the results in a timely manner. Our clients have found that this service helps to facilitate onsite decision-making and results in more complete and successful investigations.

Drilling guide – We run a geostatistical program after each log to show where the next location should be drilled to limit the number of locations that need to be logged. Our clients have found this service saves them 1 or more days on site, easily paying for using it.

SmartData Solutions® Package with 3D Gallery - Our staff will run all the MIP and EC results through our patented process and produce 3D images of the chemical and geological results. This can be done each day and the 3D site images and Conceptual Site Model can be updated daily. We can include in these images, surface features and lab results from samples from the site in our final report.

For examples of our presentation capabilities for MIP data, visit a typical client webpage with project results from raw data to high resolution video images:

The collection, rapid processing and internet delivery of direct sensing data is protected by COLUMBIA Technologies with a series of pending patents.

COLUMBIA TECHNOLOGIES

SmartData Solutions®

Selected Project Experience

EPA and State funded *Triad* Projects, Dennis Rounds, Petroleum Release Compensation Fund, 605-773-3769. Revenue of $60,000. COLUMBIA completed rapid assessments of 5 Legacy Service Stations in a total of 15 days. Each site was thoroughly logged with the MIP and a detailed Conceptual Site Model was created by Columbia and updated throughout the day for interactive webcasts. The evolving 3D images were posted on a project webpage accessible by the entire team for timely decision-making.

EPA funded *Vapor Intrusion* assessment of Armen Cleaners in Ann Arbor, Michigan, David Sawicki of TetraTech EMI,248-350-9694. COLUMBIA provided MIP services and processed all site data with SmartData Solutions® so 3D CSM images were available for the team to review. We also conducted soil gas sampling and installed permanent vapor implants around the neighborhood for quarterly monitoring.

BRAC *Triad* Site assessment and closure, Vint Hill Farms in Manassas, VA. Nora Zirp of Shaw Group 336-454-0745. COLUMBIA participated as part of the Systematic Planning, field phase and reporting on this very successful assessment and closure of a site that had been under investigation for years. Our teams provided the direct push sampling, well installation and membrane interface probing that quickly bracketed the source area. We also utilized the SmartData Solutions® data management system for updating the 3D conceptual site model on a daily basis and conducted real-time interactive webcasts so all parties could have their concerns addressed on a daily basis.

CECIL FIELD assessment of Petroleum Release, Jacksonville, Florida, Tetra Tech., Paul Calligan, 813-806-0202. Revenue of $150,000. COLUMBIA conducted 48 MIP profiles to depths up to 118 ft. Petroleum was found at depths as much as 80 ft below the groundwater table. The MIP/EC survey saved the client from the need to install many monitoring wells on the site. Our teams performed sampling of soils and water for laboratory analysis via a dual tube sampling system.

CHARLESTON Naval Weapons Station, SWMU 12 in Charleston, South Carolina for CH2MHill. David Beverly, 770-604-9182. Revenue of $18,142.
Using MIPS, Columbia outlined a Pentachlorophenol (PCP) spill, which was migrating through an ancient fluvial channel. Once the MIP/EC logging had clearly delineated the source and extent of the solvents, samples were collected with the dual tube sampling system. A casing was set through a confining layer at 30 ft and samples were collected at greater depths.

Maryland Sand and Gravel Site, Elkton, MD for ERM, Jeff Pflanzenbaum, Contract # ERM011901t, Revenue: $ 27,000. COLUMBIA conducted multiple Membrane Interface Probe profiles to locate DNAPL and then confirmed this with the FLUTe Ribbon Sampler.

MANUFACTURING SITE, Knoxville, TN for Earth Technology, Bill DiGuiseppi, (303-804-2356) ETC011102t. Revenue: $45,000. COLUMBIA Technologies was contracted to perform vertical profiling using the Membrane Interface Probe and to collect soil and groundwater samples from depths to 30 ft through the floor of the basement of the building.

NJDEP Projects – COLUMBIA was retained to work on several NJDEP projects. One was at Jacks Auto, where we delineated a gasoline plume. Another site was at the Hurley Facility, where we located the sources and the extent of chlorinated solvents. The firm has also done numerous projects for private firms throughout the state. Our work plans and final reports were accepted by the NJDEP.

MDE Projects – COLUMBIA has worked on numerous projects with the Maryland Department of the Environment. The firm conducted the rapid assessment of 26 petroleum sites that had been previously closed. The goal was to assess the status of these sites and the presence and extent of MTBE, TBA and other oxygenates, which had not been tested for during the previous investigations. The firm has also performed work on solvent sites and on Brownfield sites, both in and out of the VCP program.

Resumes

J. E. (NED) TILLMAN, President

Ned has 30 years of experience in environmental project management and has developed and refined various sampling and analytical technologies. He has chaired and served on committees on ground water, Brownfields, Risk Based Assessments, Expedited Site Assessments and Field Analytical Techniques for the State of Maryland, ASTM, EPA and API and holds certifications from AAPG (#3159) and AIPG (#6245). He is a registered geologist in Pennsylvania and Delaware and has a MS in Geochemistry from Syracuse(1973) and a BA from Franklin & Marshall (1971).

JOHN H SOHL, III , CEO

John is the Chief Executive Officer of Columbia Technologies. He is responsible for the overall direction of corporate activities and the quality of field services. Mr. Sohl also has responsibility for the capital structure and business development of Columbia Technologies. Mr. Sohl has 25 years of experience in senior technical project management and business development. Mr. Sohl holds B.S. in Engineering from the United States Naval Academy (1972) and a MBA from Chaminade University of Honolulu (1987).

THOMAS MILLER, CIO

Tom is the manager of the SmartData Solutions® data management system. He is responsible for all development of faster and better processes for handling, visualization and delivery of data to our clients in near real time. He manages the SmartData Solutions® DataBase – which is the largest direct sensing data base in the country. He has BS and MS degrees from George Mason University and has been awarded the CIO Certificate for the Federal Government.

RANDY BRAND, Field Operations Manager

Randy is the senior field superintendent and DPT manager/operator. He has 15 years of Geoprobe experience and has been instrumental in the modification and design of soil, water and vapor sampling tools. He has performed successful Geoprobe sampling and injection projects at over 1000 sites, both in this country and abroad. He has served as Columbia Technologies' Health and Safety Officer and has taught courses for both the OSHA 40 hr and 8 hr updates. He received his Bachelors degree from the University of Maryland in 1983.

EXPERIENCED MIP OPERATORS – COLUMBIA is unique in the country, in that we have 4 MIP systems and a very experienced staff, which is fully dedicated to the successful performance and interpretation of Membrane Interface Probing surveys.

DOUGLAS MCINNES, MIP Operator

Doug is responsible for the technical development and quality assurance of Direct Sensing instrumentation. His experience includes 25 years in analytical laboratories and related industries, including all phases of sample collection, sample preparation and analysis, data validation, report writing, customer service, project management, lab waste management, computer usage and supervision. Mr. McInnes received a BS in Chemistry from Towson State University (1988).

MORGAN AYCOCK, MIP Operator

Morgan is a Senior Chemist and an experienced Membrane Interface Probe Operator. He has been fully engaged in performing SmartMIP and SmartScan® services from DPT and CPT platforms. In addition to MIP operations, he is skilled in IR, UV-VIS, HPLC, and Chromatography. He has worked on projects throughout the US and has been instrumental in the successful completion of site assessments for due diligence and risk analysis projects. Morgan received his Chemistry Degree from the College of Charleston, where he was a member of the Chemistry Fraternity and the Honor Society.

SmartData Solutions®

COST ESTIMATE

Friday, April 07, 2006

Prepared for: South Carolina DHEC
2600 Bull Street
Columbia, SC 29201

The following cost estimate is for COLUMBIA Technologies' services as described in the attached Proposal. These prices are based on a 3 day job which should be adequate to bound the extent of the free product with a grid at 25 ft centers.

Estimate of charges

3 day ***SmartMIPS*** logging @ $ 2500/day	$7500
3 day of Geoprobe to push the MIP est. @$1500	$4500
1 day of Geoprobe to collect samples est. @$1500	$1500
7 man/days perdiem @ $125/man/day	$875
Mobilization/demobilization	$1000
Reporting	
SmartData Solutions® Processing, QA and 3D Gallery	$1500
Create Web-page and post site map and historic data	incl
Daily Posting of logs, Drill Guide and 3D CSMs @$250/day	$500
TOTAL	**$17,375**

Optional Services

Probes lost or damaged due to subsurface conditions are charge at $1500 each.
Coring, if required @$80 for holes up to12 inch deep.
GPS mapping of survey points @ $ 500
Permitting

The final invoice will reflect the amount of work actually done and actual time required. Our rates are for up to a 9 hour day to include equipment prep, decon, data processing and delivery and travel. Overtime will be charged at $350/hr for the MIP van and operator. Payment terms are Net 30. COLUMBIA is not responsible for damage to any underground structure. Projects canceled within 72 hours of start date are subject to a $1000 cancellation/postponement fee.

ACCEPTED BY:_____
South Carolina DHEC

1450 South Rolling Rd. Baltimore, MD 21227 Phone: 410.536. 9911 Fax: 410.536 .0222

TERMS AND CONDITIONS

This agreement is entered into on Friday, April 07, 2006 between **COLUMBIA Technologies, LLC**, a Maryland corporation, (referred to as the Contractor) and South Carolina DHEC (referred to as the Client). This agreement shall be governed by the laws of the State of Maryland.

1. Quotations for site investigations are valid for 90 days. These terms and conditions shall preside over the work unless specific agreement to the contrary has been made in writing prior to the start of the work. Terms are net 30 days, 1.5% interest per month will be added to any outstanding balances that exceed 30 days. Any legal or other costs incurred in collecting delinquent amounts shall be paid by the Client.
2. The rig operator will solely determine when the maximum capacity of the equipment has been reached. Should refusal arise during the performance of a sounding, the Contractor will stop advancement and determine whether or not he/she feels that it is safe to continue without harming Contractors tooling or equipment. The Client shall pay for all the completed work at the rates quoted. If remedial action to achieve deeper penetration is requested by the Client, the Client shall pay contractor for the actual time and expenses incurred to determine and perform remedial action and to continue advancement.
3. The Contractor will take reasonable precautions to control damage to the property. The correction on any site damage, including subsurface damages, is not a part of this agreement.
4. The Client shall obtain all necessary permits and access agreements necessary to complete the work. Any Contractor costs associated with non-availability of the required permits shall be paid by the Client.
5. The Client shall provide adequate access to the site and the drilling locations on the site. In the event that access is not adequate; all costs incurred in providing access shall be paid by the Client.
6. Client shall mark, or arrange to have marked, on the ground the exact location of all underground structures and utilities with the project site. It will be the responsibility of the client to notify the utility locating service at least 72-hours prior to field activities. Client shall have COLUMBIA Technologies' LLC's name added to the utility clearance number. The Client shall hold Contractor harmless against any and all costs, losses, damages or expenses, including legal expenses resulting from any damage to underground features or utilities.
7. The Contractor shall endeavor to perform services in accordance with generally and currently accepted industry principles and practices. This warranty is in lieu of other written warranties, either express or implied.
8. The Contractor shall have sole discretion with regard to quality and completeness of the final product. The Contractor shall not be responsible for the interpretation by others of the information obtained.
9. The Client will make full and complete disclosure to Contractor of all safety information, hazardous areas, chemical and other dangerous materials used currently or in the past at the work site; to the extent such information is known to the Client prior to the commencement of site activities. Failure to make such notification will render the Client fully and completely liable for all damages or injuries suffered by Contractor or Contractors employees.
10. If contamination exists at the site, COLUMBIA Technologies, in its activities and work on the site, will not be held liable or responsible for any disturbance and/or redistribution thereof.
11. The Contractor represents and warrants that it and its employees are protected by workers compensation insurance and the Contractor has such coverage under public liability and property damage insurance policies.
12. The Contractor shall not be liable for failure or delays in performance due to any reason beyond the direct control of the Contractor.

Agreed this Date

COLUMBIA Technologies, a Veteran-owned, small business 1450 South Rolling Road Baltimore, MD 21227	South Carolina DHEC 2600 Bull Street Columbia, SC 29201

COLUMBIA TECHNOLOGIES

SmartData Solutions ™

Sole Source Justification

Basic Geoprobe technology and MIP tools are available commercially. However, COLUMBIA has become the leader in deploying MIP based services, because it has developed a series of ***patent*** protected enhancements to the basic tooling. These enhancements have resulted in a much more useful and reliable capability. ***Our patent # is 7058509 and covers:***

SmartData Solutions® is an advanced approach to collecting, reviewing, processing and presenting the data as easy to understand 3D images. By providing data and images on a timely basis, field work can be completed efficiently without the need for revisits.

Daily Posting of MIP Results to Secure Project Specific Website - We will provide you with logs of each location at the end of each hole and will post these logs and transects on a secured webpage on a daily basis for review by your colleagues who may not be in the field. Our clients have found that this service helps to facilitate onsite decision-making and results in more complete and successful investigations.

Proprietary Comparative Data Base – Our ability to interpret your results will be enhanced by our ability to compare them with the most extensive MIP database in the country.

Strict QA Protocols – We have developed a rigorous QAQC protocol together with the EPA and COE that allows us to produce data that is reproduceable and is of known quality so that it can be used in risk assessments.

SmartScan® allows us to see VOCs at levels below traditional MIP abilities.

Full Speciation – COLUMBIA has developed the ability to speciate the gas stream and therefore can identify specific compounds that contribute to the total VOC response.

Experience: Most experienced MIP firm in the country. We have 4 MIP systems and 4 fully trained and experienced MIP professionals. We regularly work with EPA and various states on projects and in presentations of the MIP technology. ***See list of presentations.***

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #28424
MECI Project Number 07-1132

Dear Mr. Shrader,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

A site visit was conducted on January 30, 2007 to gauge and located monitoring wells. MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on February 9, 2007. The event was conducted on monitoring wells MWR-1A and MW-8 to remove free phase petroleum product. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring wells MWR-1A at a thickness of 0.01 and MW-8 at a thickness of 1.14 feet prior to the AFVR event. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 8.50 pounds or approximately 1.47 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.06 pounds per hour. Concentrations of off gas produced during the event were recorded from 711 parts per million by volume (PPM) to 1,680 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 17.0 to 20.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1A.

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

89 tech

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2A. Monitoring well locations are depicted on attached Figure 1.

A total of 125 gallons of liquid was removed from MWR-1A and MW-8 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Subject: Aggressive Fluid Vapor Recovery Report
Country Side 2
Westminster, South Carolina
SCDHEC Site ID # 06742; CA #28424
MECI Project Number 07-1132B

Dear Mr. Shrader,

Midlands Environmental Consultants, Inc. (MECI) is pleased to submit the attached Aggressive Fluid Vapor Recovery Report for the referenced site. This describes the aggressive fluid vapor recovery activities conducted at the site in general accordance with South Carolina Department of Health and Environmental Control (SCDHEC) guidelines.

AGGRESSIVE FLUID VAPOR RECOVERY

A site visit was conducted on January 30, 2007 to gauge and locate monitoring wells. MECI personnel conducted an Aggressive Fluid Vapor Recovery (AFVR) event at Country Side 2 on March 18, 2007. The event was conducted on monitoring wells MWR-1A, MWR-1 and MW-8 to remove free phase petroleum product. The event was conducted continuously for eight hours. Free phase petroleum product was detected in monitoring wells MWR-1A at a thickness of 0.69, MWR-1 at a thickness of 1.47, and MW-8 at a thickness of 0.03 feet prior to the AFVR event. The event was conducted by MECI personnel utilizing a MECI vacuum extraction unit. Free phase petroleum product was not detected in the well immediately following the event.

MECI treated the off gas produced during the AFVR event using an activated carbon filter system. Calculated total petroleum hydrocarbons removed from the well were 10.41 pounds or approximately 1.80 equivalent gallons. The average rate of removal for the hydrocarbons was calculated to be 1.30 pounds per hour. Concentrations of off gas produced during the event were recorded from 478 parts per million by volume (PPM) to 1,520 PPM. Measurements were obtained from vapors prior to entering off gas treatment. Vacuum readings were recorded at a range of 10.0 to 19.0 inches of mercury during the event. A complete compilation of measurements recorded is presented in attached Table 1B.

Post Office Box 854, Lexington SC 29071 • 1144 Old Two Notch Road, Lexington, SC 29073
Telephone: (803) 808-2043 • fax: (803) 808-2048

90 tch

Differential pressures and groundwater levels were measured and recorded for selected site monitoring wells at regular intervals. This data is summarized in the attached Table 2B. Monitoring well locations are depicted on attached Figure 1.

A total of 105 gallons of liquid was removed from MWR-1A, MWR-1 and MW-8 during this event. Free Phase Petroleum product was not observed in the holding tank at the end of the event. The fluids produced were transported to Crandall Corporation of Lexington, S.C. for disposal. A disposal manifest for these fluids is attached at the end of this report.

QUALIFICATIONS OF REPORT

The activities and evaluative approaches used in this assignment are consistent with those normally employed in enhanced fluid recovery events and waste management projects of this type. Contents of this report are intended for the use by MECI and the South Carolina Department of Health and Environmental Control, under mutually agreed upon terms and conditions. If other parties wish to rely on this report please contact MECI prior to their use of this information so that a mutual understanding and agreement of the terms and conditions of our services can be established.

Midlands Environmental appreciates the opportunity to offer our professional environmental related services to you on this project. Please feel free to contact us at 803-808-2043 if you have any immediate questions or comments.

Sincerely,
Midlands Environmental Consultants, Inc.
