

Diabetes In Jasper County, 2012

Produced by the South Carolina Department of Health and Environmental Control

Impact of Diabetes in the United States

- Diabetes affects 25.8 million Americans and contributes to approximately 231,000 deaths a year.
- Diabetes is becoming more common in the United States. From 1980 through 2011, the number of Americans with diagnosed diabetes has more than tripled (from 5.6 million to 20.9 million).
- The direct and indirect costs of diabetes in the U.S. were nearly \$174 billion in 2008.
- 69,701 people died of diabetes in the U.S. in 2010.

Diabetes in South Carolina

- Approximately 421,549 adults in South Carolina are diagnosed with diabetes. African Americans have a 42% higher prevalence than Whites.
- The total direct costs of hospitalizations and emergency room visits were over \$4.7 billion in 2012.
- Diabetes is the seventh leading cause of death in South Carolina, claiming 1,186 lives in 2012.

Behavioral Risk Factors

- Major behavioral risk factors, such as obesity and physical inactivity are partially responsible for development of type 2 diabetes (Fig 1).

Diabetes Prevalence

- An estimated 10% of adults in Region 8 suffer annually from diabetes (Fig 2).

*County-level BRFSS not available for 2012.

Hospital and Emergency Room Discharges

- In 2012, there were 57 hospitalizations for diabetes in Jasper County for all ages.
- There were an additional 423 hospital discharges with diabetes-related conditions in Jasper County.
- In 2012, there were 101 emergency room (ER) visits for diabetes as the primary diagnosis, among which 70 (69%) were by African-American patients.
- There were 1035 ER visits for diabetes as a related condition.

- Medicare paid 31% of the ER and Hospitalization charges in Jasper County (Fig 3).

Complications

- 43% of patients hospitalized in SC for diabetes had complications in 2012; 39% of hospitalizations in Jasper County (Table 1).
- In 2011, more than 74% of people in SC with diabetes had hypertension, compared with only 30% of people without diabetes.

Table 1. Hospitalizations for Diabetes Complications in Jasper County in 2012.			
Diabetes Complication	Hospital Admissions	Percent of Diabetes Hospital Admissions	Total Charges
Renal Failure	148	32%	\$4,873,000
Lower Extremity Amputation	7	1%	\$260,500
Ketoacidosis	24	5%	\$439,700
Retinopathy	17	4%	\$582,600

- In 2011, more than 67% of people with diabetes had high cholesterol.
- 2012, the rates for lower extremity amputations among blacks in SC were 3times the rates among whites.

Mortality

- Diabetes is the thirteenth leading cause of death in Jasper County.
- A total of 2 people in Jasper County died from diabetes in 2012.

- The Jasper County mortality rate was 8/100,000 in 2012, slightly below the state average.
- Jasper County ranks #35 in diabetes mortality in South Carolina 2010-2012.
