

Diabetes In Anderson County, 2012

Produced by the South Carolina Department of Health and Environmental Control

Impact of Diabetes in the United States

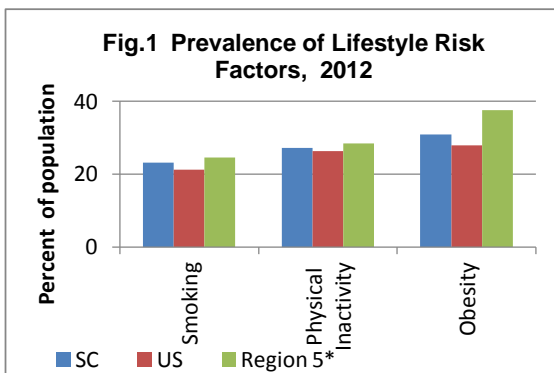

- Diabetes affects 25.8 million Americans and contributes to approximately 231,000 deaths a year.
- Diabetes is becoming more common in the United States. From 1980 through 2011, the number of Americans with diagnosed diabetes has more than tripled (from 5.6 million to 20.9 million).
- The direct and indirect costs of diabetes in the U.S. were nearly \$174 billion in 2008.
- 69,701 people died of diabetes in the U.S. in 2010.

Diabetes in South Carolina

- Approximately 421,549 adults in South Carolina are diagnosed with diabetes. African Americans have a 42% higher prevalence than Whites.
- The total direct costs of hospitalizations and emergency room visits were over \$4.7 billion in 2012.
- Diabetes is the seventh leading cause of death in South Carolina, claiming 1,186 lives in 2012

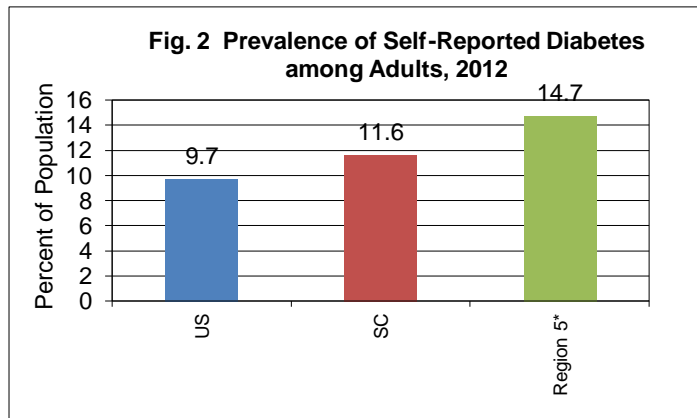

Behavioral Risk Factors

- Major behavioral risk factors, such as obesity and physical inactivity are partially responsible for development of type 2 diabetes (Fig 1).

Diabetes Prevalence

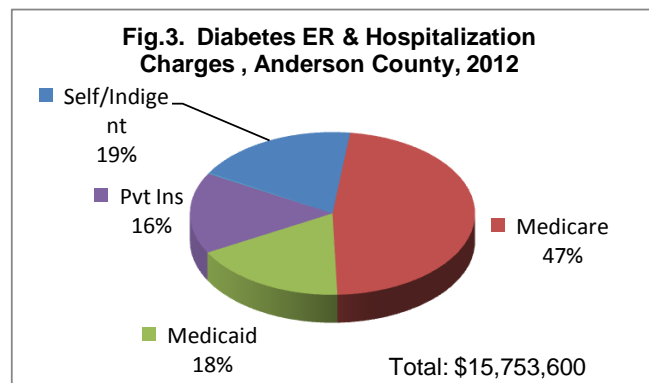

- An estimated 14.7% of adults in Anderson County suffer annually from diabetes (Fig 2).

*County-level BRFSS not available for 2012.

Hospital and Emergency Room Discharges

- In 2012, there were 395 hospitalizations for diabetes in Anderson County for all ages.
- There were an additional 4768 hospital discharges with diabetes-related conditions in Anderson County.
- In 2012, there were 321 emergency room (ER) visits for diabetes as the primary diagnosis, among which 98 (31%) were by African-American patients.
- There were 6101 ER visits for diabetes as a related condition.

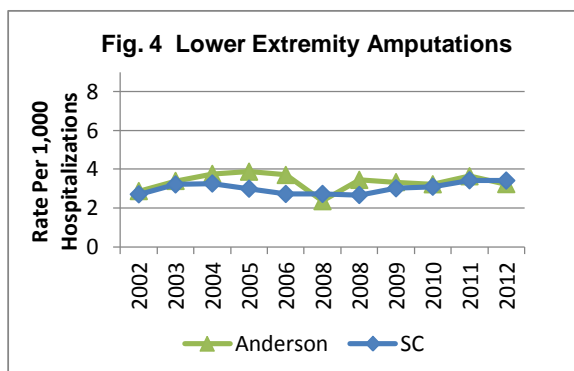

- Medicare paid for 47% of the ER and Hospitalization charges in Anderson County (Fig 3).

Complications

- 43% of patients hospitalized in SC for diabetes had complications in 2012; 37% of hospitalizations in Anderson County (Table 1).
- In 2011, more than 74% of people in SC with diabetes had hypertension, compared with only 30% of people without diabetes.

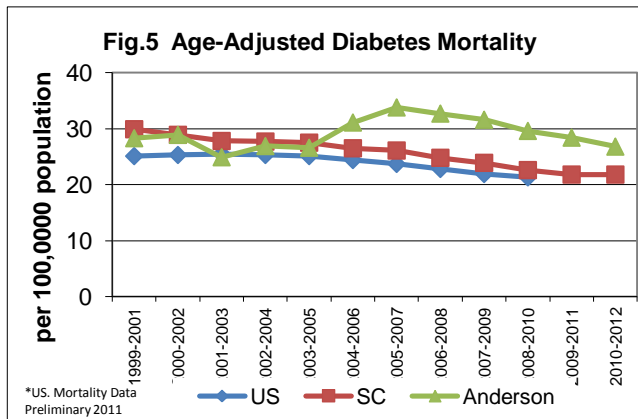

Diabetes Complication	Hospital Admissions	Percent of Diabetes Hospital Admissions	Total Charges
Renal Failure	1,555	30%	\$78,096,300
Lower Extremity Amputation	78	2%	\$7,225,400
Ketoacidosis	132	3%	\$6,267,400
Retinopathy	103	2%	\$5,377,400

- In 2011, more than 67% of people with diabetes had high cholesterol.
- 2012, the rates for lower extremity amputations among blacks in SC were 3times the rates among whites.

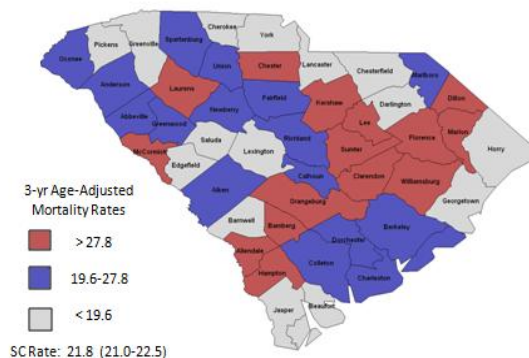

Mortality

- Diabetes is the seventh leading cause of death in Anderson County.
- A total of 63 people in Anderson County died from diabetes in 2012.

- The Anderson County mortality rate was 27/100,000 in 2012, above the state average.
- Anderson County ranks #18 in diabetes mortality in South Carolina in 2010-2012.
