

Lead Detection in Public Water Systems 2013-2017

Notes: The Action Level for lead is greater than 15 parts per billion or .015 mg/L. The units for the lead values shown are in mg/L.

Monitoring periods are January through June and July through December if the system is on six month monitoring. The monitoring period is June 1 through September 30 if the system is on annual or three year monitoring.

An exceedence of the action level is calculated based on the 90th percentile of all samples taken during the monitoring period (at different locations within the distribution system or multiple samples taken at the same location).

A blank means no sample was taken during that monitoring period. A zero means a sample was taken and lead was not found above the detection limit.

There is no federal or state maximum contaminant level for lead. An exceedence of the action level requires the public water system to implement measures to control corrosion, provide education to their customers about ways to reduce exposure to lead in drinking water, and additional sampling.
