

Bamberg County Memorial Hospital

Healthcare Associated Infections Report - February 1, 2009

Surgical Site Infection (SSI) Rate by Procedure and Risk Index 07/01/2007 - 11/30/2008

Procedure	Risk Category^{1,2,3}	No. of Infections	No. of Specific Procedures Performed⁴	Infection Rate (per 100 Procedures)
Cholecystectomy (Gallbladder Surgery)	Outpatient	0	8	0.00

1. Basic SSI Risk Index: NHSN assigns surgical patients into risk categories based on the presence of one or more of three major risk factors. For further explanation see [Definition of Terms](#).

2. If there is more than one risk category in a row (e.g., 2, 3), it means that the risk of infection between the individual categories was not different statistically, so the data from those categories shown were combined.

3. If you do not see a risk category, it means that no surgeries were performed for that particular risk category.

4. * = Too few procedures. Reporting on too few procedures is a risk to patient confidentiality. If five or fewer surgical procedures are performed, the report for the number of infections will be deferred until more procedures are performed.

Bamberg County Memorial Hospital

Central Line Associated Blood Stream Infection (CLABSI) Rate 07/01/2007 - 11/30/2008

This hospital did not have any central line days for the July 2007 - November 2008 time period.

Hospital Profile

Average Daily Census:

16

Lab Capabilities: Does this hospital's laboratory use the Clinical and Laboratory Institute (CLSI) antimicrobial susceptibility standards?

Yes

Infection Control Process

Number of Infection Control Practitioners:

1

Total hours per week performing surveillance:

20

Total hours per week for infection control activities other than surveillance:

20
