

Treatment Record

for Latent TB Infection (Directly Observed Therapy)

Name: _____

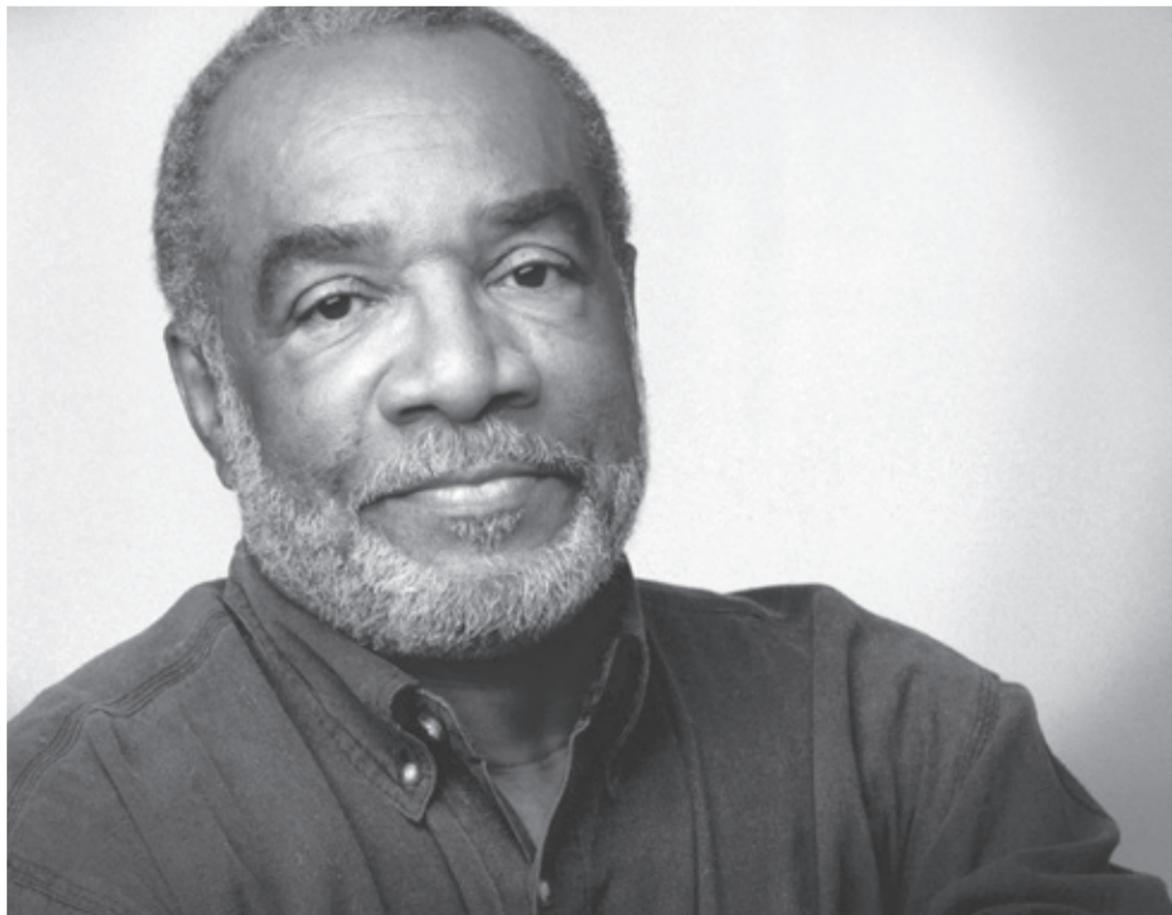

Date: _____ County: _____

Your TB test shows that you have been infected with the germ that causes tuberculosis or “TB”.

You will be taking:

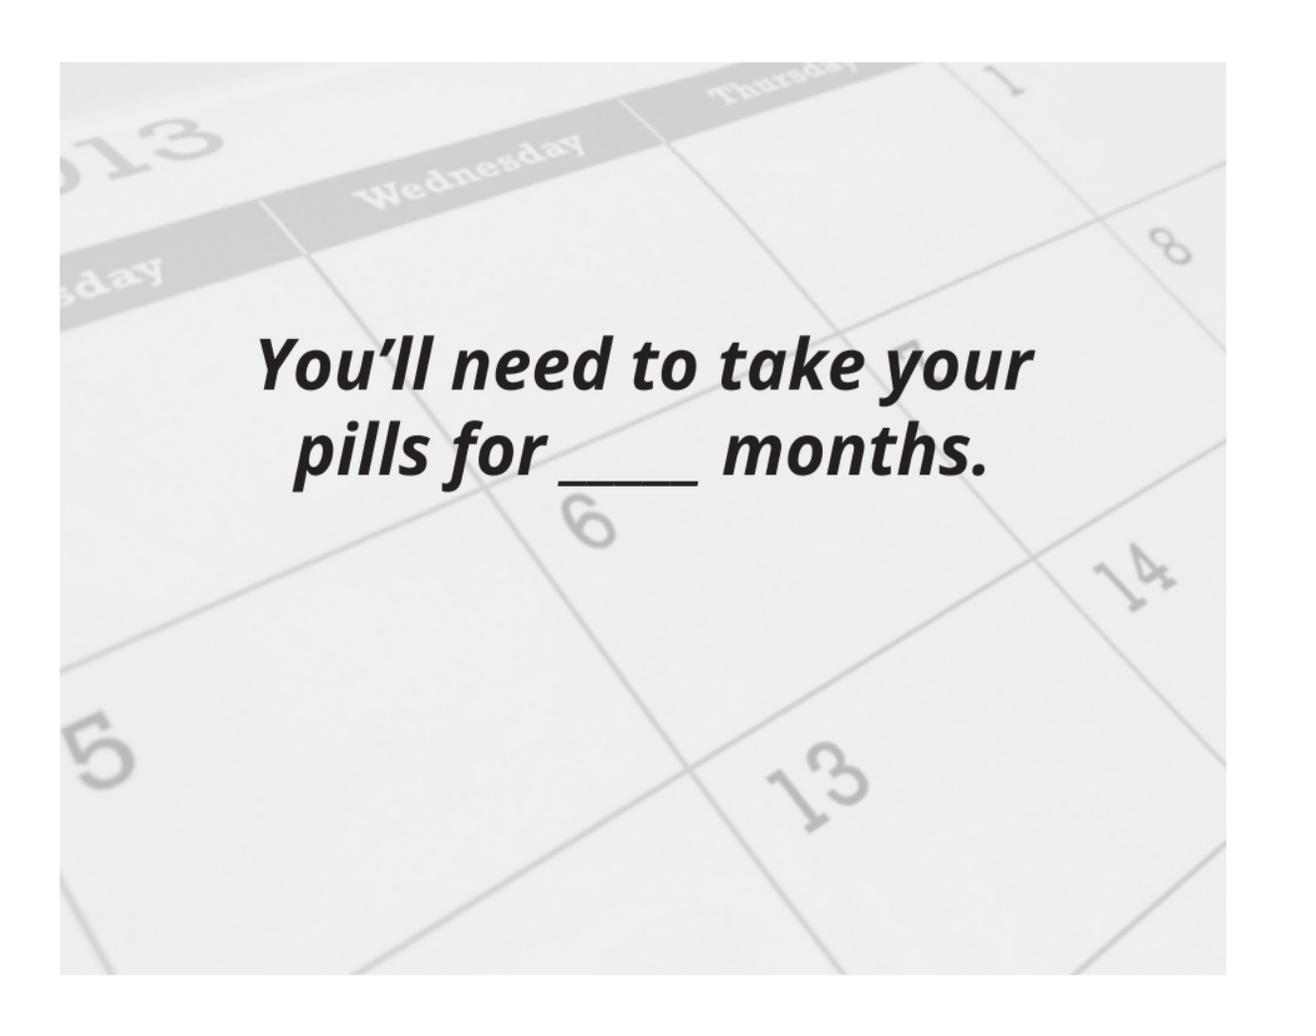

You will be taking your TB medicine by Directly Observed Therapy (DOT).

This means a health care worker will bring your medicine to you each time you take it. This will make it easy to take your medicine correctly.

These pills will treat your infection so that you won't get sick with TB.

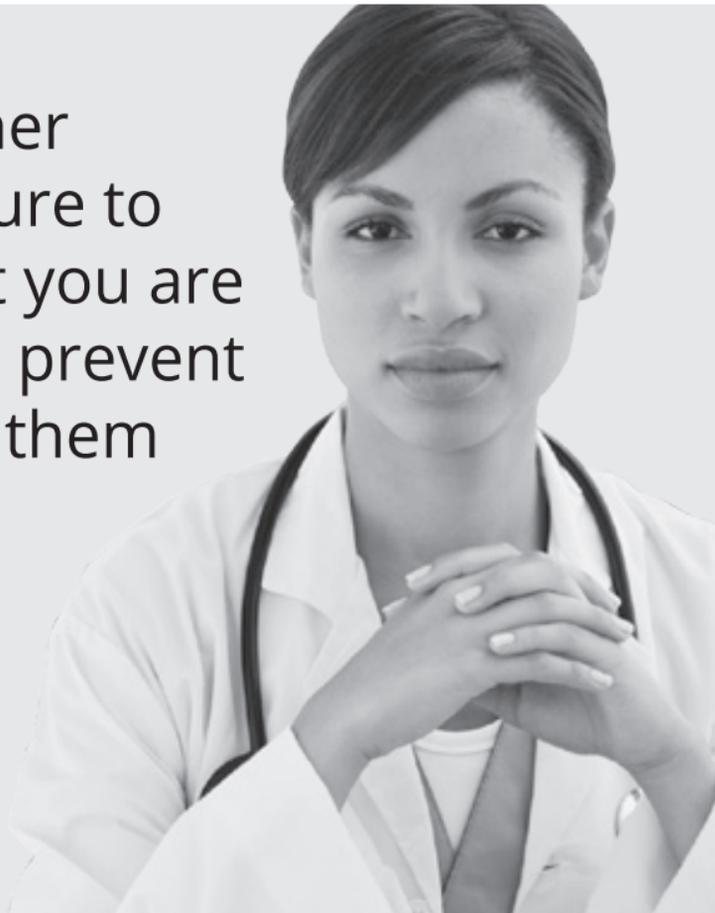

The pills **won't work** unless you take them exactly as instructed.

***You'll need to take your
pills for ____ months.***

If you see other doctors, be sure to tell them that you are taking pills to prevent TB and show them this record.

Let us know about any other pills you are taking.

We will see you often to
make sure your pills
are working.

Together we can cure TB!

Problems with these pills are rare, but they can happen.

If you notice any of these problems, stop taking your pills and call your TB nurse as soon as possible.
