

Flu Watch

Week Ending November 24, 2012 (MMWR Week 47)

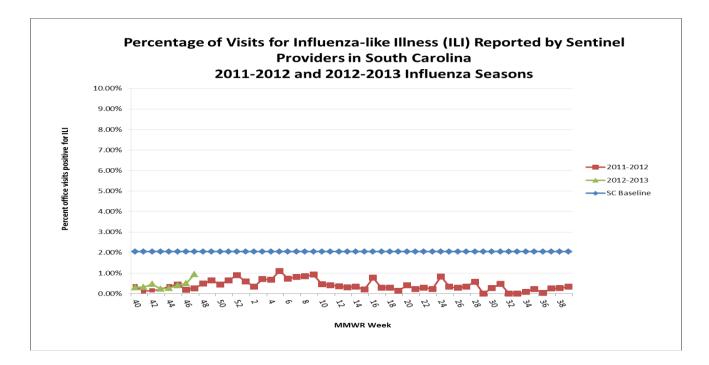

All data are provisional and may change as more reports are received.

In this issue:		MMWR Week 47 at a Glance:
ILINet	2	Influenza Activity Level: WIDESPREAD Note: Activity level definitions are found on page 14
Virologic surveillance	4	ILI Activity Status (South Carolina baseline is 2.05%*): Below baseline in the Upstate (.95%), Midlands (.95%), and along the Coast (1.75%). The
Rapid antigen tests	7	state ILI percentage was .98%. These data reflect reports from 15 (46.9%) providers.
Hospitalizations and deaths	8	SC Viral Isolate and RT-PCR Activity: Fourteen positive specimens were reported. Since 9/30/12, 44 positive specimens have been reported.
Syndromic Surveillance	10	Positive Rapid Flu Test Activity: 1232 positive rapid tests were reported. Since 9/30/12, 1976 positive rapid tests have been reported.
Activity level definitions	14	Hospitalizations: Thirty-eight lab confirmed hospitalizations were reported. Since 9/30/12, 61 hospitalizations have been reported.
SC influenza surveillance components	15	Deaths: No lab confirmed deaths were reported.
National Surveillance	16	

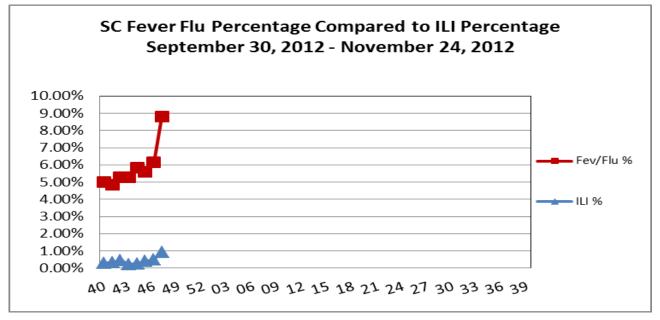

Summary of ILI Activity, Positive Confirmatory Tests, and Influenza Associated Hospitalizations and Deaths

	Current week	Previous week	Change from previous week
Percent of ILI visits reported by ILINet providers	.95%	.50%	▲ .45
Number of positive confirmatory tests	14	6	▲ 8
Number of lab confirmed flu hospitalizations	38	10	▲ 28
Number of lab confirmed flu deaths	0	0	0

During the most recent MMWR week, .95% of patient visits to SC ILINet providers were due to ILI. This is below the state baseline **(2.05%)**. This ILI percentage compares to .26 % this time last year. Reports were received from providers in 12 counties, representing 6 of the 8 regions. The statewide percentage of ER visits with fever-flu syndrome was 8.80%.

*The SC baseline is the mean percentage of patient visits for ILI during non-influenza weeks (weeks when percent of positive lab tests was below 20%) for the previous three seasons plus two standard deviations.

*Only includes hospitals participating in SC syndromic surveillance

Influenza-Like Illness Reported by Sentinel Providers November 18, 2012 – November 24, 2012

County	ILI %	County	ILI %
Abbeville		Greenwood	NR
Aiken	1.12%	Hampton	1.75%
Allendale		Horry	NR
Anderson	0%	Jasper	NR
Bamberg		Kershaw	1.18%
Barnwell		Lancaster	
Beaufort	NR	Laurens	NR
Berkeley	NR	Lee	
Calhoun		Lexington	NR
Charleston	NR	Marion	
Cherokee		Marlboro	
Chester		McCormick	4.76%
Chesterfield		Newberry	
Clarendon		Oconee	
Colleton		Orangeburg	
Darlington		Pickens	0%
Dillon	NR	Richland	1.18%
Dorchester	NR	Saluda	2.50%
Edgefield		Spartanburg	.51%
Fairfield		Sumter	NR
Florence	.60%	Union	
Georgetown	NR	Williamsburg	
Greenville	.94%	York	1.37%

NR: No reports received ----: No enrolled providers

Geographic Region	ILI %	# of Reporters
Upstate-Regions 1 -2	.95	8
Midlands-Regions 3-5	.95	6
Coastal-Regions 6-8	1.75	1

*County ILI percentages are affected by the number of reporting providers within that county.

Positive confirmatory influenza test results* Current MMWR Week (11 /18/12 - 11/ 24/12)						
	BOL	Other clinical labs				
Number of specimens tested	11	NA				
Number of positive specimens	10	4				
Influenza A unsubtyped		1				
Influenza A H1N1	2					
Influenza A H3N2	7	2				
Influenza B	1	1				
Other						

Includes culture, RT-PCR, DFA, and IFA

During the previous MMWR week, 14 positive specimens were reported.

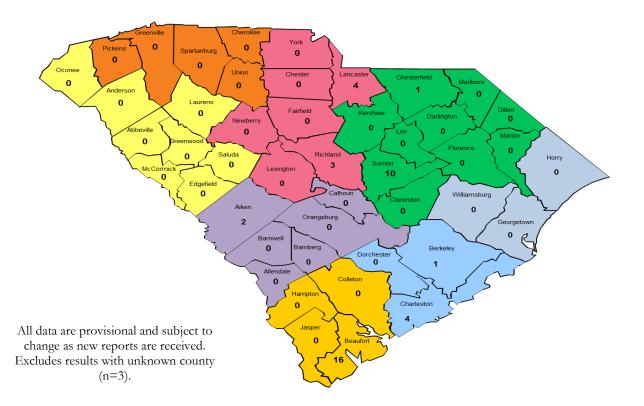

Positive confirmatory influenza test results* Cumulative (09/30/12 - 11/24/12)					
	BOL Other clinical lab				
Number of specimens tested	51	NA			
Number of positive specimens	34	10			
Influenza A unsubtyped		1			
Influenza A H1N1	12	2			
Influenza A H3N2	17	5			
Influenza B	5	2			
Other					

Includes culture, RT-PCR, DFA, and IFA

Positive Confirmatory Tests by County
Current Week 11/18/12 – 11/24/12

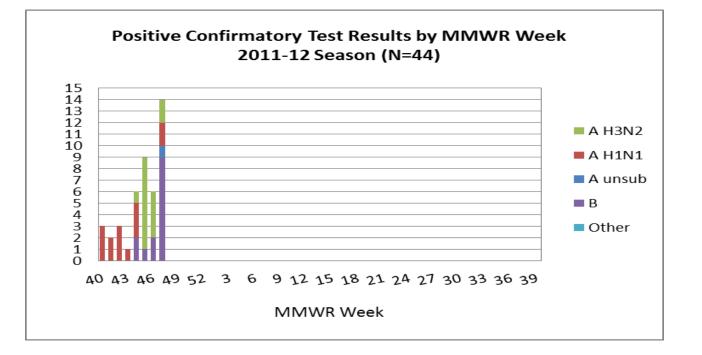

County	Positive Tests	County	Positive Tests	County	Positive Tests
Abbeville		Dillon		Marion	
Aiken	2	Dorchester		Marlboro	
Allendale		Edgefield		McCormick	
Anderson		Fairfield		Newberry	
Bamberg		Florence		Oconee	
Barnwell		Georgetown		Orangeburg	
Beaufort	2	Greenville		Pickens	
Berkeley	1	Greenwood		Richland	1
Calhoun		Hampton		Saluda	
Charleston	2	Horry		Spartanburg	
Cherokee		Jasper		Sumter	
Chester		Kershaw		Union	
Chesterfield		Lancaster	4	Williamsburg	
Clarendon		Laurens		York	
Colleton		Lee		Unknown	2
Darlington		Lexington			

Map of Positive Confirmatory Tests by County Cumulative 09/30/12 - 11/24/12

	A	A	В	A	Unk		A	A	В	A	Unk
D 1	H1N1	H3N2		Unsub		D : 0	H1N1	H3N2		Unsub

Charleston		3	1			5 1					
Dorchester						Unknown		2	1		

Positive Confirmatory Tests by County and Type Cumulative 9/30/12 – 11/24/12

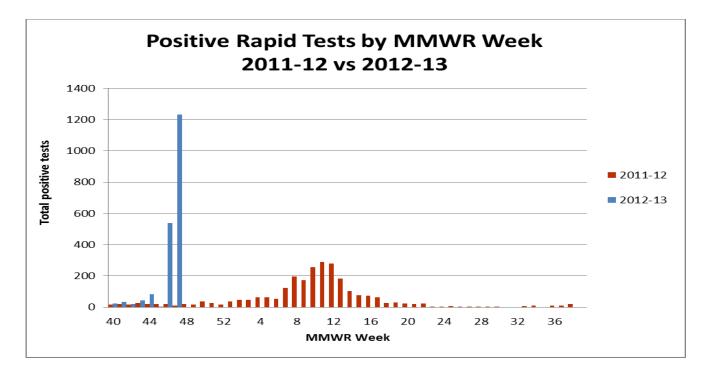

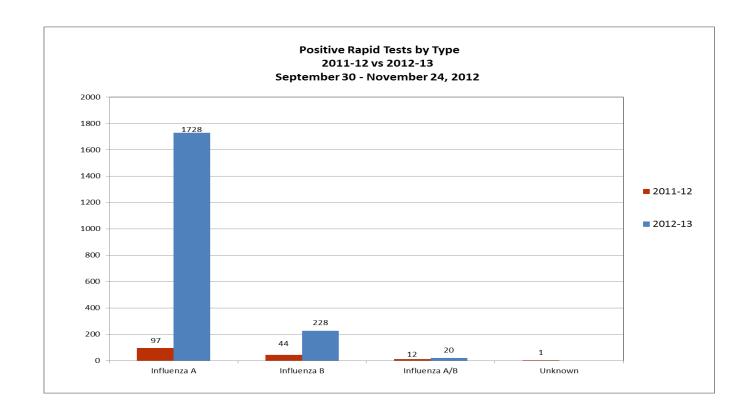

During the past MMWR week, 1232 positive rapid antigen tests were reported. Of these, 1135 were influenza A, 83 were influenza B and 14 were influenza A/B. This compares to 9 this time last year. 1976 positive rapid tests have been reported this year.

County	Positive Tests	County	Positive Tests	County	Positive Tests
Abbeville		Dillon		Lexington	55
Aiken	118	Dorchester	16	Marion	
Allendale		Edgefield		Marlboro	1
Anderson		Fairfield	2	McCormick	
Bamberg		Florence	16	Newberry	
Barnwell	6	Georgetown	10	Oconee	
Beaufort	36	Greenville	234	Orangeburg	57

Clarendon	7	Laurens		Williamsburg	1
Colleton	2	Lee		York	65
Darlington	4				

Positive Rapid Flu Tests by County November 18, 2012 – November 24, 2012

*Data reporting may have been affected by the Veteran's Day holiday.

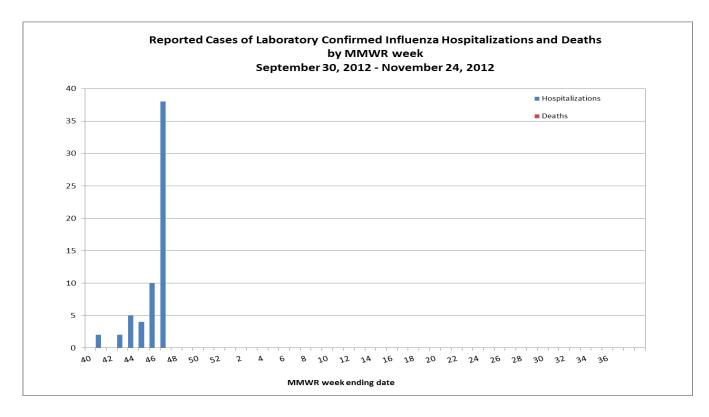

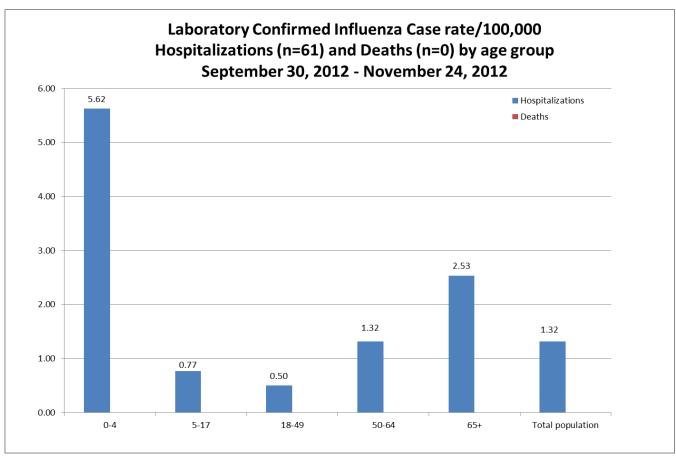

IV. Influenza hospitalizations and deaths

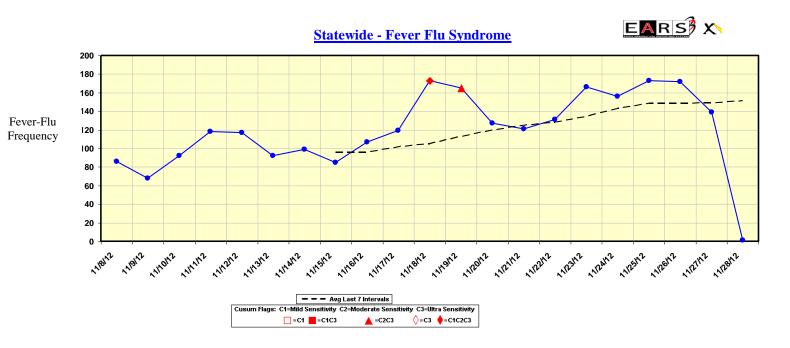

During the past MMWR week, 38 lab confirmed* influenza hospitalizations were reported. No lab confirmed deaths were reported.

	Total number*					
Number of Reporting	35					
Hospitals (Current week)						
	Current MMWR Week (11/18- 11/24/12)	Cumulative (since 09/30/12)				
Hospitalizations	38	61				
Deaths	0	0				

*These data are provisional. Lab confirmation for hospitalizations and deaths includes culture, PCR, DFA, IFA, and rapid test.

V. South Carolina Disease Alerting, Reporting & Tracking System (SC-DARTS)

Cumulative Sums Analysis (CUSUM):

C1 = Flags because of sharp rise in counts from 1 day to the next

C2 = Flags because of aberrant, initial, rapid rise in counts and peak in counts

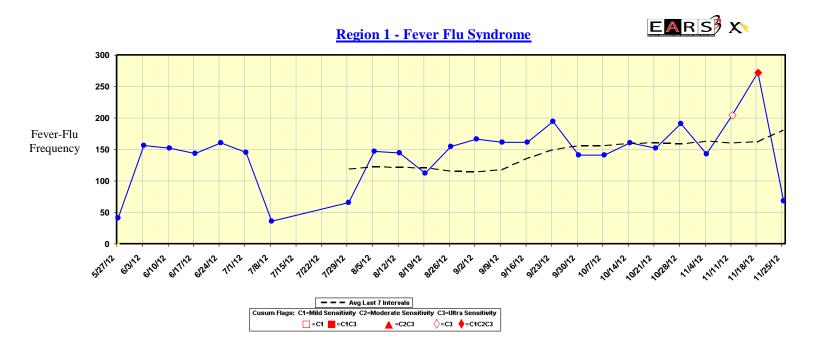

C3 = Flags because of a gradual rise in counts over a short time

The SC Statewide Fever-Flu Syndrome graph above illustrates the <u>daily</u> counts of hospital emergency department (ED) visits with an Influenza-like Illness (ILI) for the past 21 days. A total of <u>21 hospital</u> facilities are reporting to the SC-DARTS system. These 21 include: AnMed Health (Region 1); Self Regional (Region 1); Oconee Medical Center (Region 1); Palmetto Health Alliance (Region 2 & 3); Greenville Hospital System (Region 2); Kershaw Health (Region 4); McLeod Health (Region 4); Elgin Urgent Care (Region 4); Medical University of South Carolina (Region 7); Roper (Region 7); St. Francis (Region 7); Trident (Region 7); Colleton (Region 8); and Hampton Regional (Region 8).

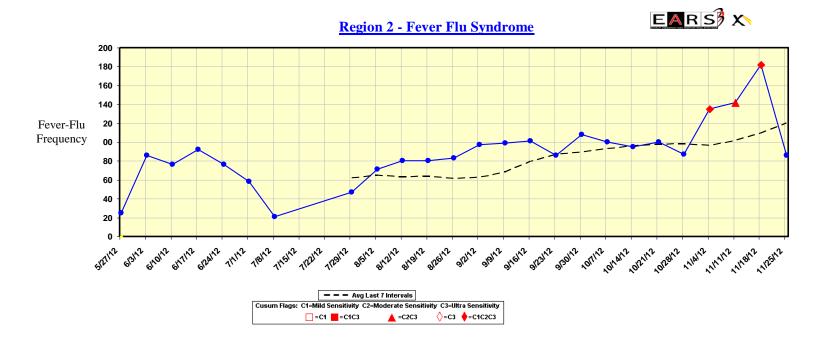

Statewide CUSUM Flag Alerts Description:

No flags for the past week.

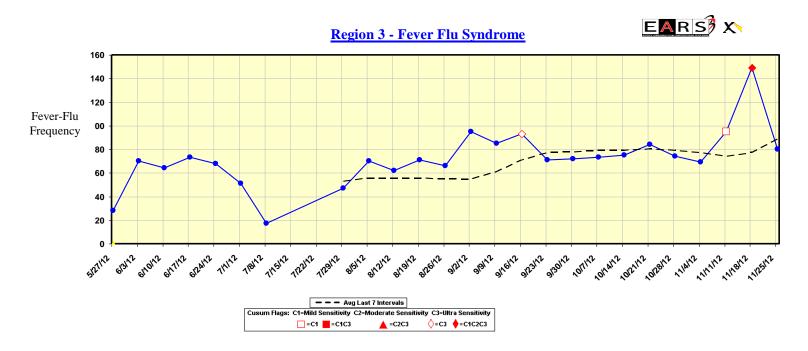

Below are the fever-flu syndrome graphs by Region for the past 180 days (weekly interval).

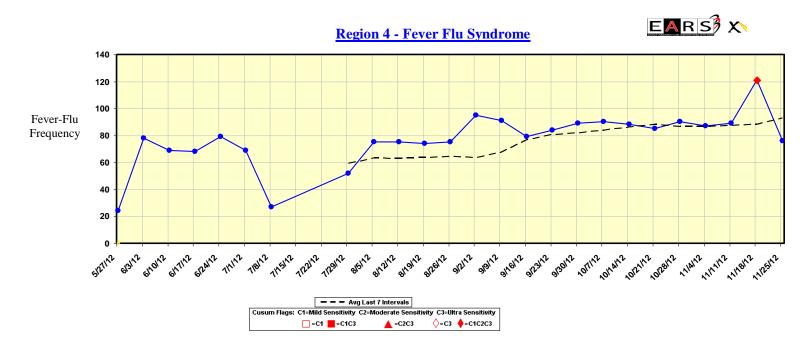

Region1 Hospitals (# of Facilities): AnMed Health (3); Self-Regional (1); Oconee Medical Center (1);

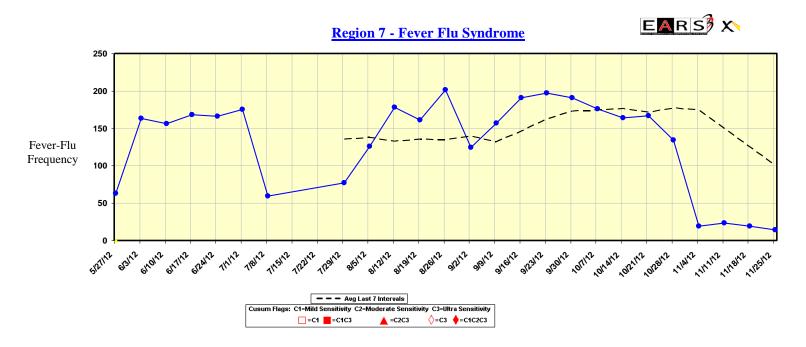

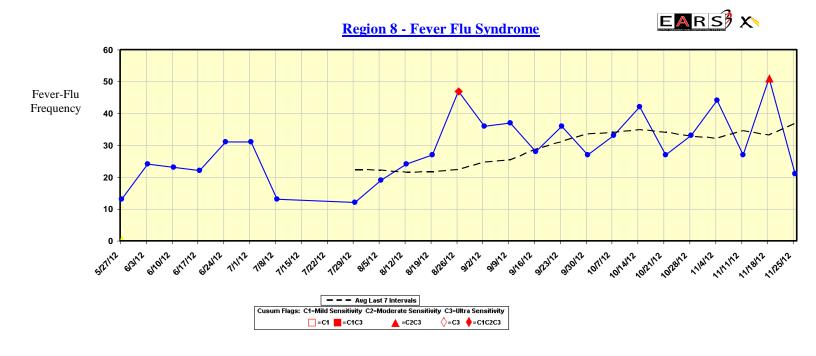

Region 3 Hospitals (# of Facilities): Palmetto Health Baptist (1), Palmetto Health Richland (1)

Region 4 Hospitals (# of Facilities): Kershaw Health (1); McLeod Health (1); Elgin Urgent Care (1)

Region 7 Hospitals (# of Facilities): Medical University of South Carolina (1), Roper (1), St. Francis (1), Trident (1)

Region 8 Hospitals (# of Facilities): Hampton Regional (1), Colleton (1)

VI. Influenza activity levels

Activity Level	ILI activity/Outbreaks		Laboratory data	
No activity	Low	And	No lab confirmed cases	
	Not increased	And	Isolated lab-confirmed cases	
Sporadic			OR	
	Not increased	And	Lab confirmed outbreak in one institution	
	Increased ILI in 1 region; ILI		Recent (within the past 3 weeks) lab evidence of	
	activity in other regions is not	And	influenza in region with increased ILI	
	increased			
			OR	
Local	2 or more institutional		Recent (within the past 3 weeks) lab evidence of	
	outbreaks (ILI or lab		influenza in region with the outbreaks; virus activity is	
	confirmed) in 1 region; ILI	And	no greater than sporadic in other regions	
	activity in other regions is not			
	increased			
	Increased ILI in 2-3 regions	And	Recent (within the past 3 weeks) lab confirmed	
			influenza in the affected regions	
Regional		1	OR	
	Institutional outbreaks (ILI or	And	Recent (within the past 3 weeks) lab confirmed	
	lab confirmed) in 2-3 regions		influenza in the affected regions	
	Increased ILI and/or		Recent (within the past 3 weeks) lab confirmed	
Widespread	institutional outbreaks (ILI or	And	influenza in the state.	
widespicad	lab confirmed) in at least 4 of	1110		
	the regions			

VII. South Carolina Influenza Surveillance Components

South Carolina influenza surveillance consists of mandatory and voluntary reporting systems for year-round influenza surveillance. These networks provide information on influenza virus strain and subtype and influenza disease burden.

Mandatory Reporting

Positive confirmatory test reporting

Positive influenza culture, PCR, DFA, and IFA results from commercial laboratories should be reported to DHEC within 7 days electronically via CHESS or using a DHEC 1129 card.

Positive rapid antigen test reporting

Summary numbers of positive rapid influenza tests and influenza type identified should be sent to theU<u>regional</u>U health department by fax or email before noon on Monday for the preceding week.

Influenza death reporting

Lab confirmed influenza deaths in adults should be reported to DHEC within 7 days. Lab confirmed influenza deaths in children under age 18 should be reported within 24 hours. These include results from viral culture, PCR, rapid flu tests, DFA, IFA or autopsy results consistent with influenza. Hospitals should report deaths to their regional health department by noon on Monday for the preceding week.

Influenza hospitalizations

DHEC requires weekly submission of laboratory confirmed influenza hospitalizations. Hospitals should report these to their <u>regional</u> health department by noon on Monday for the preceding week.

For additional information about ILINet or to become an ILINet provider, contact the Acute Disease Epidemiology influenza surveillance coordinator at springcb@dhec.sc.gov.

Voluntary Networks

Influenza-Like Illness (ILINet) Sentinel Providers Network

ILINet focuses on the number of patients presenting with influenza-like symptoms in the absence of another known cause. ILI is defined as fever (temperature of U \geq U100°F) plus a cough and/or a sore throat in the absence of another known cause. Providers submit weekly reports to the CDC of the total number of patients seen in a week and the subset number of those patients with ILI symptoms by age group.

South Carolina Disease Alerting, Reporting & Tracking System (SC-DARTS)

SC-DARTS is a collaborative network of syndromic surveillance systems within South Carolina. Currently our network contains the following data sources: SC Hospital Emergency Department (ED) chief-complaint data, Poison Control Center call data, Over-the-Counter (OTC) pharmaceutical sales surveillance, and CDC's BioSense Biosurveillance system. The hospital ED syndromic surveillance system classifies ED chief complaint data into appropriate syndrome categories (ex: Respiratory, GI, Fever, etc.). These syndrome categories are then analyzed using the cumulative sum (CUSUM) methodology to detect any significant increases. Syndromic reports are distributed back to the hospital on a daily basis.

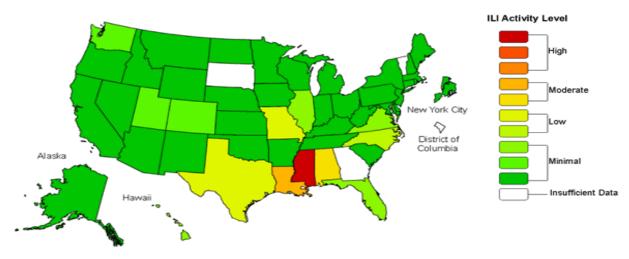

To join the SC-DARTS system or for more information, please contact: Alecia Alianell at 803-898-0269 or alianeat@dhec.sc.gov.

VIII. National Surveillance MMWR Week 46 (11/11-11/17)

During week 46 (November 11-17, 2012), influenza activity increased in the U.S.

- <u>Viral Surveillance</u>: Of 3,742 specimens tested and reported by U.S. World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 46, 494 (13.2%) were positive for influenza.
- **<u>Pneumonia and Influenza Mortality:</u>** The proportion of deaths attributed to pneumonia and influenza (P&I) was below the epidemic threshold.
- **Influenza-associated Pediatric Deaths:** One influenza-associated pediatric death was reported and was associated with an influenza A (H3) virus.
- Outpatient Illness Surveillance: The proportion of outpatient visits for influenza-like illness (ILI) was 1.6%, which is below the national baseline of 2.2%. All 10 regions reported ILI below region-specific baseline levels. One state experienced high ILI activity, two states experienced moderate ILI activity; 3 states experienced low ILI activity; New York City and 41 states experienced minimal ILI activity, and the District of Columbia and 3 states had insufficient data.
- <u>Geographic Spread of Influenza</u>: The geographic spread of influenza in 1 state was reported as widespread; 6 states reported regional activity; 8 states reported local activity; the District of Columbia, Guam, and 31 states reported sporadic activity; 3 states reported no influenza activity, and Puerto Rico, the U.S. Virgin Islands and 1 state did not report.

A description of surveillance methods is available at: http://www.cdc.gov/flu/weekly/overview.htm

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet 2012-13 Influenza Season Week 46 ending Nov 17, 2012

*This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state.

Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.

Differences in the data presented here by CDC and independently by some state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.
