# Flu 

## Week Ending February 23, 2013 (MMWR Week 8)

All data are provisional and may change as more reports are received.

Summary of ILI Activity, Positive Confirmatory Tests, and Influenza Associated Hospitalizations and Deaths

|  | Current week | Previous week | Change from previous week |
| :---: | :---: | :---: | :---: |
| Percent of ILI visits reported by ILINet providers | .92\% | 1.07\% | $\nabla .15$ |
| Number of positive confirmatory tests | 13 | 24 | -11 |
| Number of lab confirmed flu hospitalizations | 15 | 29 | - 14 |
| Number of lab confirmed flu deaths | 0 | 0 | 0 |

## I. ILINet Influenza-Like Illness Surveillance

During the most recent MMWR week, $.92 \%$ of patient visits to SC ILINet providers were due to ILI. This is below the state baseline (2.05\%). This ILI percentage compares to $.84 \%$ this time last year. Reports were received from providers in 10 counties, representing 6 of the 8 regions. The statewide percentage of ER visits with fever-flu svndrome was $7.58 \%$.

*The SC baseline is the mean percentage of patient visits for ILI during non-influenza weeks (weeks when percent of positive lab tests was below $20 \%$ ) for the previous three seasons plus two standard deviations.

## SC Fever Flu Percentage Compared to ILI Percentage September 30, 2012 - February 23, 2013

[^0]
## Influenza-Like Illness Reported by Sentinel Providers <br> February 17, 2013 - February 23, 2013

| County | ILI \% | County | ILI \% |

Positive Confirmatory Test Results by MMWR Week 2011-12 Season

MMWR Week

During the past MMWR week, 907 positive rapid antigen tests were reported. Of these, 286 were influenza A, 605 were influenza B, and 16 were influenza A/B. This compares to 198 this time last year. 42,553 positive rapid tests have been reported this year.

Positive Rapid Flu Tests by County
February 17, 2013 - February 23, 2013

| County | Positive Tests | County | Positive Tests | County | Positive Tests |
| :--- | :---: | :--- | :---: | :--- | :---: |
| Abbeville |  | Dillon |  | Lexington | 101 |
| Aiken | 4 | Dorchester | 39 | Marion | 21 |
| Allendale | 8 | Edgefield |  | Marlboro | 1 |
| Anderson | 29 | Fairfield | 9 | McCormick |  |
| Bamberg |  | Florence | 48 | Newberry | 17 |
| Barnwell | 18 | Georgetown | 81 | Oconee |  |
| Beaufort | 20 | Greenville | 74 | Orangeburg | 14 |
| Berkeley | 17 | Greenwood |  | Pickens | 3 |
| Calhoun |  | Hampton | 14 | Richland | 89 |
| Charleston | 98 | Horry | 50 | Saluda |  |
| Cherokee | 2 | Jasper | 2 | Spartanburg | 23 |
| Chester |  | Kershaw | 13 | Sumter | 15 |
| Chesterfield | 2 | Lancaster | 7 | Union |  |
| Clarendon | 9 | Laurens |  | Williamsburg | York |
| Colleton | 3 |  |  |  |  |
| Darlington | 20 |  |  |  |  |

## Positive Rapid Tests by MMWR Week 2011-12 vs 2012-13

IV. Influenza hospitalizations and deaths

During the past MMWR week, 15 lab confirmed* influenza hospitalizations were reported. No lab confirmed deaths were reported.

|  | Total number* |  |
| :--- | :--- | :--- |
| Number of Reporting <br> Hospitals (Current week) | 36 |  |
|  | Current MMWR Week (2/17/13-2/23/13) | Cumulative (since 09/30/12) |
| Hospitalizations | 15 | 1441 |
| Deaths | 0 | 38 |

[^1]

| Lab Confirmed Influenza Deaths by County <br> September 30, 2012 - February 23, 2013 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| County | Deaths | County | Deaths |  |

| Total Deaths |  |  |  |  |

## V. South Carolina Disease Alerting, Reporting \& Tracking System (SC-DARTS)

Fever-Flu Frequency

## Cumulative Sums Analysis (CUSUM):

C1 = Flags because of sharp rise in counts from 1 day to the next
C2 = Flags because of aberrant, initial, rapid rise in counts and peak in counts
C3 = Flags because of a gradual rise in counts over a short time
The SC Statewide Fever-Flu Syndrome graph above illustrates the daily counts of hospital emergency department (ED) visits with an Influenza-like IlIness (ILI) for the past 21 days. A total of $\mathbf{2 1}$ hospital facilities are reporting to the SC-DARTS system. These 21 include: AnMed Health (Region 1); Self Regional (Region 1); Oconee Medical Center (Region 1); Palmetto Health Alliance (Region 2 \& 3); Greenville Hospital System (Region 2); Kershaw Health (Region 4); McLeod Health (Region 4); Elgin Urgent Care (Region 4); Medical University of South Carolina (Region 7); Roper (Region 7); St. Francis (Region 7); Trident (Region 7); Colleton (Region 8); and Hampton Regional (Region 8).

## Statewide CUSUM Flag Alerts Description:

No flags for the past week.
Below are the fever-flu syndrome graphs by Region for the past 180 days (weekly interval).

Region1 Hospitals (\# of Facilities): AnMed Health (3); Self-Regional (1); Oconee Medical Center (1);

Region 2 - Fever Flu Syndrome
EARS委 X

Region 2 Hospitals (\# of Facilities): Greenville Hospital System (4); Palmetto Health Easley (1)

Region 3 Hospitals (\# of Facilities): Palmetto Health Baptist (1), Palmetto Health Richland (1)

Region 4 Hospitals (\# of Facilities): Kershaw Health (1); McLeod Health (1); Elgin Urgent Care (1)

Region 7 Hospitals (\# of Facilities): Medical University of South Carolina (1), Roper (1), St. Francis (1), Trident (1)

Region 8 Hospitals (\# of Facilities): Hampton Regional (1), Colleton (1)

| Activity Level | ILI activity/Outbreaks |  | Laboratory data |
| :---: | :---: | :---: | :---: |
| No activity | Low | And | No lab confirmed cases |
| Sporadic | Not increased | And | Isolated lab-confirmed cases |
|  | OR |  |  |
|  | Not increased | And | Lab confirmed outbreak in one institution |
| Local | Increased ILI in 1 region; ILI activity in other regions is not increased | And | Recent (within the past 3 weeks) lab evidence of influenza in region with increased ILI |
|  | OR |  |  |
|  | 2 or more institutional outbreaks (ILI or lab confirmed) in 1 region; ILI activity in other regions is not increased | And | Recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions |
| Regional | Increased ILI in 2-3 regions | And | Recent (within the past 3 weeks) lab confirmed influenza in the affected regions |
|  | OR |  |  |
|  | Institutional outbreaks (ILI or lab confirmed) in 2-3 regions | And | Recent (within the past 3 weeks) lab confirmed influenza in the affected regions |
| Widespread | Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least 4 of the regions | And | Recent (within the past 3 weeks) lab confirmed influenza in the state. |

## VII. South Carolina Influenza Surveillance Components

South Carolina influenza surveillance consists of mandatory and voluntary reporting systems for year-round influenza surveillance. These networks provide information on influenza virus strain and subtype and influenza disease burden.

## Mandatory Reporting

## Positive confirmatory test reporting

Positive influenza culture, PCR, DFA, and IFA results from commercial laboratories should be reported to DHEC within 7 days electronically via CHESS or using a DHEC 1129 card.

Positive rapid antigen test reporting
Summary numbers of positive rapid influenza tests and influenza type identified should be sent to theU regionalU health department by fax or email before noon on Monday for the preceding week.

Influenza death reporting
Lab confirmed influenza deaths in adults should be reported to DHEC within 7 days. Lab confirmed influenza deaths in children under age 18 should be reported within 24 hours. These include results from viral culture, PCR, rapid flu tests, DFA, IFA or autopsy results consistent with influenza. Hospitals should report deaths to their regional health department by noon on Monday for the preceding week.

## Influenza hospitalizations

DHEC requires weekly submission of laboratory confirmed influenza hospitalizations. Hospitals should report these to their regional health department by noon on Monday for the preceding week.

For additional information about ILINet or to become an ILINet provider, contact the Acute Disease Epidemiology influenza surveillance coordinator at
springcb@dhec.sc.gov.

## Voluntary Networks

Influenza-Like Illness (ILINet) Sentinel Providers Network
ILINet focuses on the number of patients presenting with influenza-like symptoms in the absence of another known cause. ILI is defined as fever (temperature of $\mathrm{U} \geq \mathrm{U} 100^{\circ} \mathrm{F}$ ) plus a cough and/or a sore throat in the absence of another known cause. Providers submit weekly reports to the CDC of the total number of patients seen in a week and the subset number of those patients with ILI symptoms by age group.

## South Carolina Disease Alerting, Reporting \& Tracking

 System (SC-DARTS)SC-DARTS is a collaborative network of syndromic surveillance systems within South Carolina. Currently our network contains the following data sources: SC Hospital Emergency Department (ED) chief-complaint data, Poison Control Center call data, Over-the-Counter (OTC) pharmaceutical sales surveillance, and CDC's BioSense Biosurveillance system. The hospital ED syndromic surveillance system classifies ED chief complaint data into appropriate syndrome categories (ex: Respiratory, GI, Fever, etc.). These syndrome categories are then analyzed using the cumulative sum (CUSUM) methodology to detect any significant increases. Syndromic reports are distributed back to the hospital on a daily basis.

To join the SC-DARTS system or for more information, please contact: Alecia Alianell at 803-898-0269 or alianeat@dhec.sc.gov.

## VIII. National Surveillance MMWR Week 7 (2/10-2/16)

During week 7 (February 10-16, 2013), influenza activity remained elevated in the United States, but decreased in most areas.

- Viral Surveillance: Of 8,144 specimens tested and reported by collaborating laboratories, 1,371 (16.8\%) were positive for influenza.
- Pneumonia and Influenza Mortality: The proportion of deaths attributed to pneumonia and influenza (P\&I) was above the epidemic threshold.
- Influenza-Associated Pediatric Deaths: Fourteen pediatric deaths were reported.
- Influenza-Associated Hospitalizations: A cumulative rate for the season of 34.2 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported. Of reported hospitalizations, more than $50 \%$ were among adults 65 years and older.
- Outpatient Illness Surveillance: The proportion of outpatient visits for influenza-like illness (ILI) was $2.8 \%$. This is above the national baseline of $2.2 \%$. All 10 regions reported ILI at or above region-specific baseline levels. Three states experienced high ILI activity; 13 states and New York City experienced moderate activity; 11 states experienced low activity; 23 states experienced minimal activity, and the District of Columbia had insufficient data.
- Geographic Spread of Influenza: Twenty-two states reported widespread influenza activity; Puerto Rico and 21 states reported regional influenza activity; the District of Columbia and 6 states reported local influenza activity; 1 state reported sporadic influenza activity; Guam reported no influenza activity, and the U.S. Virgin Islands did not report.

A description of surveillance methods is available at: http://www.cdc.gov/flu/weekly/overview.htm

[^0]:    *Only includes hospitals participating in SC syndromic surveillance

[^1]:    *These data are provisional. Lab confirmation for hospitalizations and deaths includes culture, PCR, DFA, IFA, and rapid test.
