#### MMWR Week 19 at a Glance:

Influenza Activity Level: SPORADIC

Note: Activity level definitions are found on page 14

ILI Activity Status (South Carolina baseline is 2.05%\*): Below baseline in the Upstate Region (0%), the Midlands Region (.13%), and the Pee Dee Region (.81%). No ILI reports were received from the Low Country Region. The state ILI percentage was .21%. These data reflect reports from 11 (34.4%) providers.

**SC Viral Isolate and RT-PCR Activity:** 2 positive specimens were reported. Since 9/30/12, 1177 positive specimens have been reported.

**Positive Rapid Flu Test Activity:** 60 positive rapid tests were reported. Since 9/30/12, 58,611 positive rapid tests have been reported.

**Hospitalizations:** 5 lab confirmed hospitalizations were reported. Since 9/30/12, 1717 hospitalizations have been reported.

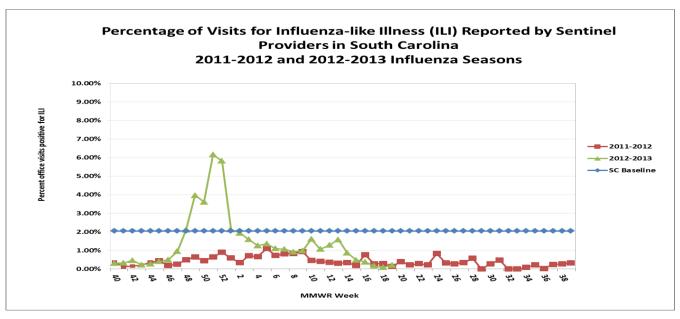

**Deaths:** No lab confirmed deaths were reported. Since 9/30/12, 46 deaths have been reported.

Summary of ILI Activity, Positive Confirmatory Tests, and Influenza Associated Hospitalizations and Deaths

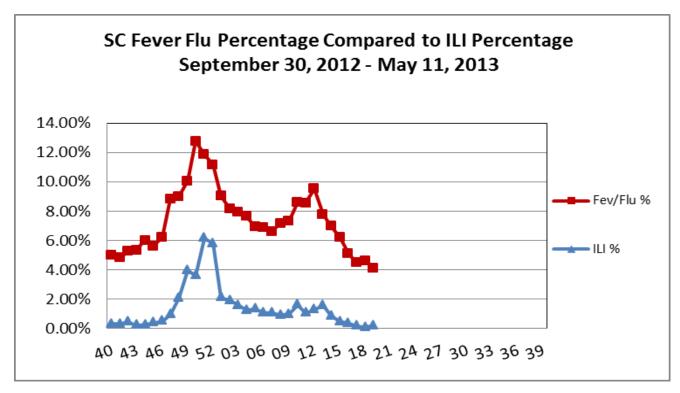

|  | Current week | Previous week | Change from previous week |
|--|--------------|---------------|---------------------------|
| Percent of ILI visits reported by ILINet providers | .21%         | .09%          | <b>A</b> .12              |
| Number of positive confirmatory tests              | 2            | 7             | <b>V</b> 5                |
| Number of lab confirmed flu hospitalizations       | 5            | 4             | <b>1</b>                  |
| Number of lab confirmed flu deaths                 | 0            | 0             | 0                         |

## I. ILINet Influenza-Like Illness Surveillance

**During the most recent MMWR week**, .21% of patient visits to SC ILINet providers were due to ILI. This is below the state baseline **(2.05%)**. This ILI percentage compares to .14 % this time last year. Reports were received from providers in 11 counties, representing 3 of the 4 regions. The statewide percentage of ER visits with fever-flu syndrome was 4.14%.

\*The SC baseline is the mean percentage of patient visits for ILI during non-influenza weeks (weeks when percent of positive lab tests was below 20%) for the previous three seasons plus two standard deviations.

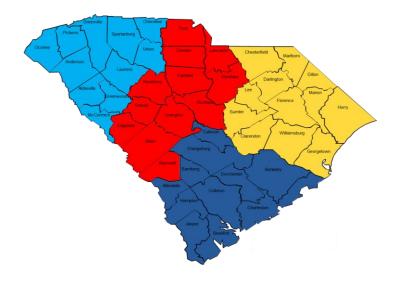

<sup>\*</sup>Only includes hospitals participating in SC syndromic surveillance

# Influenza-Like Illness Reported by Sentinel Providers May 5, 2013 – May 11, 2013

# V. South Carolina Disease Alerting, Reporting & Tracking System (SC-DARTS)

#### **Cumulative Sums Analysis (CUSUM):**

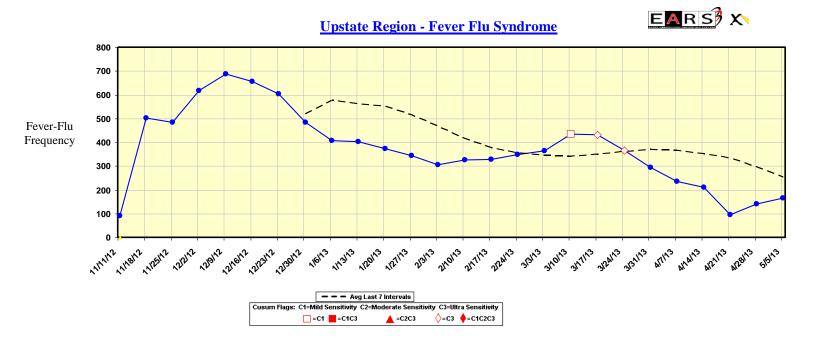

- C1 = Flags because of sharp rise in counts from 1 day to the next
- C2 = Flags because of aberrant, initial, rapid rise in counts and peak in counts
- C3 = Flags because of a gradual rise in counts over a short time

The SC Statewide Fever-Flu Syndrome graph above illustrates the <u>daily</u> counts of hospital emergency department (ED) visits with an Influenza-like Illness (ILI) for the past 21 days. A total of <u>21 hospital</u> facilities are reporting to the SC-DARTS system. These 21 include: AnMed Health (Upstate Region); Self Regional (Upstate Region); Oconee Medical Center (Upstate Region); Palmetto Health Alliance (Upstate and Midlands Regions); Greenville Hospital System (Upstate Region); Kershaw Health (Midlands Region); McLeod Health (Pee Dee Region); Elgin Urgent Care (Midlands Region); Medical University of South Carolina (Low Country Region); Roper (Low Country Region); St. Francis (Low Country Region); Trident (Low Country Region); Colleton (Low Country Region); and Hampton Regional (Low Country Region).

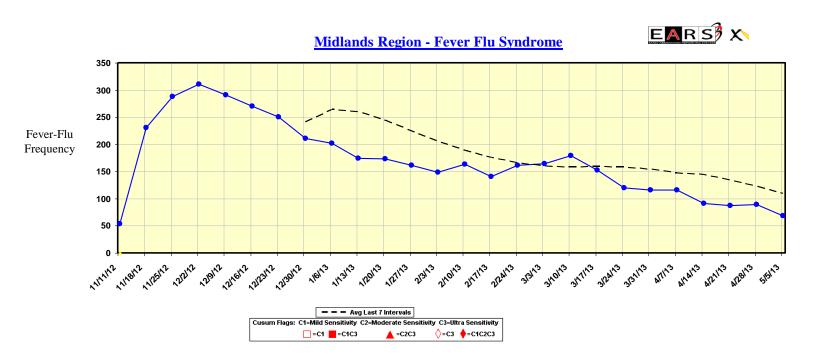

#### **Statewide CUSUM Flag Alerts Description:**

No flags for the past week.

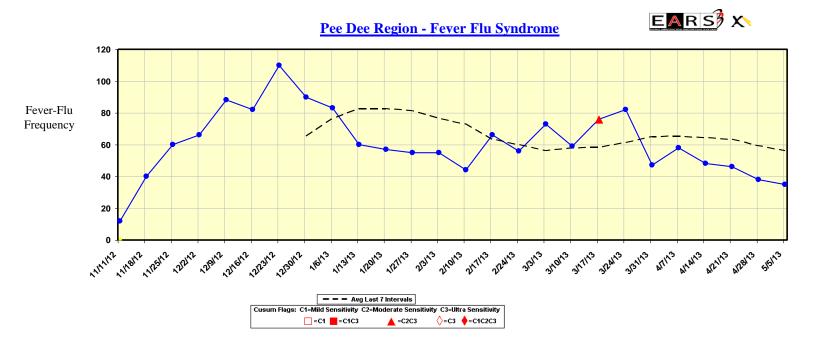

Below are the fever-flu syndrome graphs by Region for the past 180 days (weekly interval).

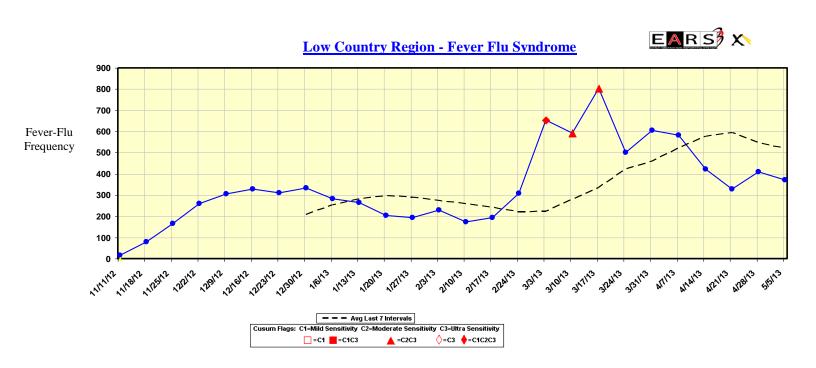

Upstate Region Hospitals (# of Facilities): AnMed Health (3); Self-Regional (1); Oconee Medical Center (1); Greenville Hospital System (4); Palmetto Health Easley (1)

Midlands Region Hospitals (# of Facilities): Palmetto Health Baptist (1); Palmetto Health Richland (1); Kershaw Health (1); Elgin Urgent Care (1)

Pee Dee Region Hospitals (# of Facilities): McLeod Health (1)

Low Country Region Hospitals (# of Facilities): Medical University of South Carolina (1); Roper (1); St. Francis (1); Trident (1); Hampton Regional (1); Colleton (1)

# VI. Influenza activity levels

| Activity Level | ILI activity/Outbreaks   |     | Laboratory data  |
|----------------|--|-----|--|
| No activity    | Low  | And | No lab confirmed cases   |
| -              | Not increased  | And | Isolated lab-confirmed cases   |
| Sporadic       |  |     | OR   |
|                | Not increased  | And | Lab confirmed outbreak in one institution  |
|                | Increased ILI in 1 region; ILI activity in other regions is not increased  | And | Recent (within the past 3 weeks) lab evidence of influenza in region with increased ILI  |
|                |  |     | OR   |
| Local          | 2 or more institutional<br>outbreaks (ILI or lab<br>confirmed) in 1 region; ILI<br>activity in other regions is not<br>increased | And | Recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions |
|                | Increased ILI in 2-3 regions   | And | Recent (within the past 3 weeks) lab confirmed influenza in the affected regions   |
| Regional       |  |     | OR   |
|                | Institutional outbreaks (ILI or lab confirmed) in 2-3 regions  | And | Recent (within the past 3 weeks) lab confirmed influenza in the affected regions   |
| Widespread     | Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least 4 of the regions                                 | And | Recent (within the past 3 weeks) lab confirmed influenza in the state.   |

# VII. South Carolina Influenza Surveillance Components

South Carolina influenza surveillance consists of mandatory and voluntary reporting systems for year-round influenza surveillance. These networks provide information on influenza virus strain and subtype and influenza disease burden.

### **Mandatory Reporting**

#### Positive confirmatory test reporting

Positive influenza culture, PCR, DFA, and IFA results from commercial laboratories should be reported to DHEC within 7 days electronically via CHESS or using a DHEC 1129 card.

#### Positive rapid antigen test reporting

Summary numbers of positive rapid influenza tests and influenza type identified should be sent to the Uregional U health department by fax or email before noon on Monday for the preceding week.

## Influenza death reporting

Lab confirmed influenza deaths in adults should be reported to DHEC within 7 days. Lab confirmed influenza deaths in children under age 18 should be reported within 24 hours. These include results from viral culture, PCR, rapid flu tests, DFA, IFA or autopsy results consistent with influenza. Hospitals should report deaths to their regional health department by noon on Monday for the preceding week.

#### Influenza hospitalizations

DHEC requires weekly submission of laboratory confirmed influenza hospitalizations. Hospitals should report these to their <u>regional</u> health department by noon on Monday for the preceding week.

For additional information about ILINet or to become an ILINet provider, contact the Acute Disease Epidemiology influenza surveillance coordinator at springcb@dhec.sc.gov.

### Voluntary Networks

## <u>Influenza-Like Illness (ILINet) Sentinel Providers</u> Network

ILINet focuses on the number of patients presenting with influenza-like symptoms in the absence of another known cause. ILI is defined as fever (temperature of U≥U100°F) plus a cough and/or a sore throat in the absence of another known cause. Providers submit weekly reports to the CDC of the total number of patients seen in a week and the subset number of those patients with ILI symptoms by age group.

# South Carolina Disease Alerting, Reporting & Tracking System (SC-DARTS)

SC-DARTS is a collaborative network of syndromic surveillance systems within South Carolina. Currently our network contains the following data sources: SC Hospital Emergency Department (ED) chief-complaint data, Poison Control Center call data, Over-the-Counter (OTC) pharmaceutical sales surveillance, and CDC's BioSense Biosurveillance system. The hospital ED syndromic surveillance system classifies ED chief complaint data into appropriate syndrome categories (ex: Respiratory, GI, Fever, etc.). These syndrome categories are then analyzed using the cumulative sum (CUSUM) methodology to detect any significant increases. Syndromic reports are distributed back to the hospital on a daily basis.

To join the SC-DARTS system or for more information, please contact: Alecia Alianell at 803-898-0269 or alianeat@dhec.sc.gov.

# VIII. National Surveillance MMWR Week 18(4/28-5/4)

During week 18 (April 28-May 4, 2013), influenza activity remained low in the United States.

- <u>Viral Surveillance:</u> Of 3,048 specimens tested and reported by collaborating laboratories, 125 (4.1%) were positive for influenza.
- o <u>Pneumonia and Influenza Mortality:</u> The proportion of deaths attributed to pneumonia and influenza (P&I) was below the epidemic threshold.
- o <u>Influenza-Associated Pediatric Deaths:</u> One pediatric death was reported.
- o <u>Influenza-Associated Hospitalizations:</u> A cumulative rate for the season of 44.2 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported. Of reported hospitalizations, 50% were among adults 65 years and older.
- Outpatient Illness Surveillance: The proportion of outpatient visits for influenza-like illness (ILI) was 0.9%. This is below the national baseline of 2.2%. All 10 regions reported ILI below region-specific baseline levels. 49 states and New York City experienced minimal activity, and the District of Columbia and 1 state had insufficient data.
- o <u>Geographic Spread of Influenza:</u> 5 states reported regional influenza activity; 3 states reported local influenza activity; Guam, Puerto Rico, and 37 states reported sporadic influenza activity; 5 states reported no influenza activity, and the District of Columbia and the U.S. Virgin Islands did not report.

A description of surveillance methods is available at: <a href="http://www.cdc.gov/flu/weekly/overview.htm">http://www.cdc.gov/flu/weekly/overview.htm</a>
