## INTRODUCTION

This report contains vital statistics data for South Carolina events that occurred in 2004. The purpose of this report is to provide basic reference data for a variety of users. Vital Statistics certificates filed with the Office of Public Health Statistics and Information Services of the South Carolina Department of Health and Environmental Control are the primary source of data presented in this report. These records include certificates of live births, deaths, marriages, divorces and annulments, and reports of fetal deaths and abortions. Data are presented for South Carolina, its 46 counties and places of 2,500 or more population. Live births, fetal deaths and deaths occurring out-of-state to South Carolina residents are also included in this report. Event information is re-allocated to the state of residence through an agreement of interstate transcript exchange.

In South Carolina fetal death and death certificates are filed by hospitals, physicians, coroners, midwives and funeral directors in the county health department where the event occurred. Each county health department forwards the certificates weekly to the Office of Vital Records. In 2004, South Carolina established the Web Birth system. This allows hospitals to file all birth certificate information via secured internet connection. Marriage and divorce certificates are transmitted to this office from the County Probate Court and Clerk of Court, respectively.

Population estimates for the intercensal years were prepared by the Office of Research and Statistics of the South Carolina Budget and Control Board under the Federal-State Cooperative Program of population estimation for local areas. The Disease Control and Epidemiology Division of the South Carolina Department of Health and Environmental Control furnished the morbidity data.

This report is available in CD format as well as in printed format. This and other reports on South Carolina vital statistics are available on the internet at the web address listed below. Click on the Health tab to the right of DHEC Home. Then click on the Public Health Statistics and Information Services link in the green column on the left.

Grant	Joseph	Anthony	Alexis	Taylor	Alexis
Devon	Thomas	Jaden	Caroline	Ashley	Aaliyah
Jaquan	Zachary	Nicholas	Brianna	Lauren	Paris
Jonah	Caleb	Tyler	Lauren	Savannah	Aniya
Malik	Jackson	Jalen	Destiny	Alexis	Janiya

### BIRTHS

The month with the most births: December (5,107)    Least Births: February (4,382)  
 Youngest Mother: 12 years old    Oldest Mother: 52 years old  
 The Biggest Baby: 13 lb 5 oz or 5,967 grams

### DEATHS

The month with the most deaths: January (3,649)    Least deaths: June (2,853)  
 The oldest person that died: 111 years old

### MARRIAGES

The youngest bride: 14 years old    The youngest groom: 16 years old  
 The oldest bride: 93 years old    The oldest groom: 97 years old  
 The month with the most marriages: May (4,142)    Least marriages: January (1,687)

### DIVORCES

The youngest bride to divorce: 16 years old    The youngest groom to divorce: 16 years old  
 The oldest bride to divorce: 96 years old    The oldest groom to divorce: 97 years old  
 The month with the most divorces: March (1,369)    Least divorces: February (943)  
 Greatest number of divorces for bride: 9    For groom: 9

## Life Expectancy

Table A-5. presents the average remaining lifetime (i.e., average number of years of life remaining at the beginning of the age interval) for South Carolinians by single year of age for 1989-1991. These tables are based on age specific death rates of South Carolina Residents for 1989-1991. The death rates were calculated using data from the 1990 Census of Population and death occurring in the United States to residents of South Carolina. Presented are tables for the total population by race and gender.

For more detailed information, please refer to the 1998 publication **U.S. Decennial Life Tables for 1989-1991, Volume II, State Life Tables Number 41, South Carolina**. Published by the U.S. Department of Health and Human Services, Center for Disease Control and Prevention, National Center for Health Statistics.

**POPULATION**

Figure B-1.  
South Carolina Estimated Population by County  
2004

## SUMMARY OF POPULATION

The estimated population of South Carolina for 2004 was 4,198,070; an increase of 50,920 from the 2003 estimated population of 4,147,150. The 2004 population showed an increase of 14.6 percent over the 1994 estimated population of 3,664,100.

### 1990 and 2000 CENSUS OF POPULATION

**Population Density:** In 1990, the population density (number of person per square mile of land area) of South Carolina was approximately 115.8. Based on the 2000 census count, the population density had increased to 133.2, a 15.0 percent increase. Approximately 67.4 percent of the 46 counties in South Carolina had population densities less than that of the state in 1990, and 7 of these counties actually had less than 40 people per square mile of land area.

**Race and Age:** In 1990, there were 2,414,178 white and 1,072,525 black and other persons residing in South Carolina. The 2000 census count, modified by race\*, recorded a 13.9 percent increase in white population and a 17.7 percent increase in the black and other population. In South Carolina, blacks make up 95.8 percent of the black and other population. As shown below, of the ten-year population change from 1990 to 2000, the 45-54 years age group showed the greatest percentage increase. Only four age groups, under 20-24 and 25-34 showed a decrease in population from 1990 to 2000. The age distribution and the percent change in the number of residents from 1990 to 2000 are as follows:

**Table B-1.  
Percent of Population by Age Group  
South Carolina 1990 and 2000**

Age Groups	1990		2000		Percent Change 1990-2000

## FERTILITY PATTERNS

Though the crude birth rate relates the event of birth to the entire population, it does not measure the population exposed to the chance of having a birth since it is based on both sexes in population. However, the crude birth rate is an index to the relative speed at which additions are being made to a population through childbirth. When the event of birth is related to the population exposed at risk, that is, to females of childbearing ages 15-44, a more specific rate is completed.

Table C-7.  
Fertility Rates\* by Race: South Carolina, 1990-2004  
(Residence Data)

YEAR	TOTAL	WHITE	BLACK & OTHER
1990	67.5	61.3	79.4

## GENDER RATIO

Out of the total 56,543 live births occurring to South Carolina residents in 2004, male births numbered 29,002 and female births numbered 27,536 giving a ratio of 105.3 males per 100 females. Table C-9 shows the ratio of males to females for the past five years.

Table C-9.  
Gender Ratio of Males per 100 Females  
South Carolina, 2000-2004  
(Residence Data)

YEAR	TOTAL	WHITE	BLACK & OTHER
2000	104.5	104.7	104.2
2001	105.0	106.1	103.2

### ATTENDANT AT BIRTH

Of the 56,543 resident births, physicians attended 94.4 percent. The term “physician” includes osteopaths, residents, interns and externs. Midwives attended 5.1 percent of the total births, 5.3 percent of the white births, and 4.7 percent of the black and other births. Other and unknown attendant accounted for less than one percent of the total births. The term “other” includes any specific attendant other than physician, midwife or self-attended, such as a friend or relative, EMT, RN, PA, etc. Included in the “unknown” category are not specified or not classifiable attendants.

## AGE OF MOTHER

In 2004, there were 122 live births to resident mothers under 15 years of age and 49 births to resident mothers 45 years of age and over. As shown in Table C-18, women aged 15-44 years were responsible for 99.7 percent of all live births. In 1980, the median age of mothers was 23.8 years. In 1986, the median age increased to 25 and remained there until 1997. The median age rose to 26 in 1997 and remained unchanged until 2001, when it rose to 27. The median age for 2004 has returned to 26. The youngest mother to give birth in 2004 was 12 years old and the oldest was 52 years old.

## LIVE BIRTHS TO UNMARRIED MOTHERS

In 2004, there were 14,771 live births to resident unmarried mothers in South Carolina, representing 26 percent of all live births. As in the past, live births to unmarried mothers occurred more frequently among young mothers. As shown in Table C-21, females under age 20 accounted for 27.0 percent of all live births to unmarried mothers in 2004.

## LIVE BIRTHS BY BIRTHWEIGHT

Birthweight distribution by race reveals racial differences. For both races, the highest percentage of births weighed between 3,000-3,499 grams. However, the median birthweight for whites was greater than the median birthweight for black and other. Figure C-5 illustrates the birthweight distribution by race.

**Table C-24.**  
**Live Births by Birthweight Groups by Race of Mother:**  
**South Carolina, 2004**  
**(Residence Data)**

Weight Group	Total		White		Black & Other	
	Number	Percent	Number	Percent	Number	Percent
Total	56,543	100.0	36,872	100.0	19,616	100.0
Less Than 2,500 grams	5,769	10.0	2,837	7.6	2,924	14.9
Under 500 grams	161	0.2	63	0.2	97	0.4
500-999 grams	431	0.8	164	0.4	267	1.4
1,000-1,499 grams	601	0.1	297	0.8	302	1.5
1,500-1,999 grams	1,115	2.0	554	1.5	559	2.8
2,000-2,499 grams	3,461	6.1	1,759	4.8	1,699	8.7
2,500 or More grams	50,765	89.8	34,031	92.2	16,688	85.0
Unknown Weight	9	0.0	4	0.0	4	0.0

## LOW WEIGHT LIVE BIRTHS

Live births under 5 pounds 8 ounces or less than 2,500 grams are characterized as low weight live births. Low weight live births accounted for 10.2 percent of the 56,543 resident births in 2004. In relation to age of mother, low weight births were comparatively frequent among very young mothers; 12.3 percent of all lives births to mothers 15-19 were low weight. Only 9.1 percent of all live births to mother 25-34 were low weight. Only 9.1 percent of all live births to mother 25-34 were low weight. Only 9.1 percent of all live births to mother 25-34 were low weight.

<sup>1</sup> Estimated pregnancies equal total live births plus abortions plus fetal deaths.

<sup>2</sup> Estimated pregnancies, Live Births and Abortions: Rates calculated per 1,000 population

<sup>3</sup> Fetal Deaths: Rates calculated per 1,000 deliveries

<sup>4</sup> Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 10-19

\* Includes unknown race

<sup>1</sup> Estimated pregnancies equal total live births plus abortions plus fetal deaths.

<sup>2</sup> Estimated pregnancies, Live Births and Abortions: Rates calculated per 1,000 population

<sup>3</sup> Fetal Deaths: Rates calculated per 1,000 deliveries

<sup>4</sup> Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 15-17.

<sup>1</sup> Estimated pregnancies equal total live births plus abortions plus fetal deaths.

<sup>2</sup> Estimated pregnancies, Live Births and Abortions: Rates calculated per 1,000 population

<sup>3</sup> Fetal Deaths: Rates calculated per 1,000 deliveries

<sup>4</sup> Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 18-19.

## YEARS OF POTENTIAL LIFE LOST (YPLL)

Years of Potential Life Lost (YPLL) is a commonly used method of measuring the rate of premature death. YPLL is defined as the number of years of potential life lost by each death occurring before a predetermined end point. The YPLL rate weights each death according to the number of years of life lost prior to the selected end point. Deaths occurring at younger ages are weighted more heavily than those occurring at older ages.

The number and rate of years of potential life lost before age 65 and before age 75 is presented for South Carolina residents during 2004 for all causes of death and for selected causes of death in Table G-21. This information is also presented for whites and for black and others in Table G-21A.

In 2004, South Carolinians lost 216,867 years of potential life before age 65 and 372,241 years before age 75 as show in Table G-21. Corresponding YPLL rates are 5,897 years of potential life lost before age 65 per 100,000 population less than 65 years. YPLL rates for black and others are higher than those of whites for the 65 year end point (7,794 versus 4,975) and for the 75 year end point (11,958 versus 8,186).

Prior to age 65, accidental death was the leading cause of years of potential life lost (47,757 years) for all races and accounted for approximately 22% percent of the total number of years of life lost. Malignant neoplasms (32,578 years), diseases of the heart (29,144) and perinatal period conditions (18,205 years) ranked second, third and fourth, respectively. The findings observed prior to age 75 have malignant neoplasms (73,911 years) being the leading cause of years of potential life lost followed by accidental deaths (65,462 years), diseases of the heart (61,653 years), and perinatal period conditions (21,015 years).

The State Tree

“The Sabal Palmetto”

Officially adopted by the General Assembly in 1939

**MARRIAGE / DIVORCE**

## TRENDS IN MARRIAGES AND DIVORCES

During the twenty-five year period from 1980-2004, marriages in South Carolina have shown considerable fluctuation. As seen in Figure H-1. In 1980, the marriage rate reached a high of 17.3 and an all time low of 8.6 in 2004. The divorce rate in 1980's reached a high of 4.4 and has declined to a rate of 3.3 in 2004.

**Figure H-1.**  
**Marriage and Divorce Rates**  
**South Carolina, 1980-2004**

## MARRIAGES

For the calendar year 2004, there were 1,928 interracial marriages in South Carolina, with 986 of these being between whites and blacks. Of these 986, (51.1) percent involved black males and white females. Table H-1 shows a cross-classification of marriages by race of bride and race of groom for South Carolina in 2004. Figure H-2 illustrates how marriage rates by race have fluctuated over the last twenty-five years.

\* Includes Hawaiian, Filipino, other Asian and Pacific Islander and other Non-White

As displayed in Table H-3, there were 3,446 persons under the age of twenty who married in South Carolina in 2004. Therefore, teenagers represent 9.6 percent of all persons who married in this state in 2004. As in previous years, the greatest number of marriages occurred between brides and grooms within the 20-24 age group.

As shown in Table H-7, for 35,945 marriages (72%), both the bride and groom were residents of South Carolina. There were 1,253 marriages (3.5%) between resident brides and non-resident grooms, and 826(3.2%) between non-resident brides and resident grooms. There were 8,068(22.4%) marriages performed in South Carolina where both bride and groom were non-residents.

## DIVORCES AND ANNULMENTS

Table H-8 shows that out of the total 27,678 persons in 2004 who were granted divorces, 28.0 percent were between the ages of 25 and 34.

The white divorce rate has consistently exceeded that of the black and other rate since 1962, the year divorces were first required to be registered with the Office of Public Health Statistics and Information Services. Figure H-3 illustrates the twenty-five year trend in divorces by race.

The most frequently cited grounds for divorce were one year separation, which accounted for 84.0 percent of all grounds for divorces, followed by adultery, drunkenness, and physical cruelty. Table H-11 shows divorces by legal grounds of decree. As shown in Table H-12, there were 10,840 children involved in divorces and annulments in 2004.

# TECHNICAL NOTES

---

## **REGISTRATION OF VITAL EVENTS**

The vital statistics system in South Carolina is a local-state-national reporting system where the vital event reports are initially submitted to the County Registrar located in the county where the event occurred. The reports are then submitted to the Division of Vital Records (State Office). By law, the Commissioner of Health is the State Registrar and appoints the chief administrative officer of each county health department as the County Registrar. The County Registrar appoints a Deputy County Registrar who carries out the routine functions of registration and certification of vital records at the county level. Beginning in 2004 birth records are now submitted electronically directly to the State Office. The State Office performs quality assurance testing on the records and also provides certifications of records for the general public. This office also provides data to the National Center for Health Statistics in cooperation with other states in order to produce national information on vital statistics.

Statewide legislation requiring the registration of births and deaths became effective January 1, 1915. South Carolina was admitted into the National Death Registration Area in 1916 and in the National Birth Registration Area in 1919. After failing to meet the completeness of registration tests, the state was excluded from both in 1925. On the basis of later tests, South Carolina was readmitted into the National Birth and Death Registration Areas in 1928.

Marriage records have been filed with the South Carolina Department of Health and Environmental Control since July 1950. The reporting form prevented the state from being admitted as a Marriage Registration Area (MRA) in the national system until legislation was enacted in 1970 to standardize the reporting form, which enabled the state to be admitted as a MRA in 1971.

Reports of divorces and annulments have been filed with the South Carolina Department of Health and Environmental Control since July 1962. The reporting of these events reached 90 percent completeness in 1971, which enabled the state to qualify as a Divorce Registration Area.

No thorough study of the completeness of fetal death registration in South Carolina has yet been made. While the law requires that the death of any fetus that has advanced beyond the 20th week of gestation or weighs 350 grams or more to be registered, it is believed that registration is notably incomplete. The registration of fetal deaths will continue to improve as the need for these data are shown through health research.

Records received after the closing date of the statistical file are not included in this report. Frequency counts in this report are based on 2004 events processed in the state office before May 31, 2004. As this publication goes to press, 2 deaths, 0 births, 0 abortion, 0 marriage and 0 divorce records for 2004 were processed after the closing date and were not added to the statistical file for 2004.

## REVISION OF CERTIFICATES

The Office of Public Health Statistics and Information Services revised its certificates of birth, death, fetal death and induced termination of pregnancy in January 1989, based on standards set forth by the National Center for Health Statistics.

The 1989 revised vital records forms were major departures from the previous revisions (see appendix). While many of the items needed for legal purposes (e.g., name) remained unchanged or slightly modified, there were major and significant changes in the Confidential Information for Medical and Health Use section of the Certificate of Live Birth. Most of the changes represented efforts to clarify items for more complete and accurate data reporting. Other than the increased length of the revised forms, the most obvious change on the Certificate of Live Birth and Report of Fetal Death is the replacement of the open-ended medical items with items having a checkbox format. The concept of checkboxes as a mechanism for capturing information on medical factors is not new. In fact, this format was successfully implemented in several states with the previous revision of the forms. Additionally, the lists of risk factors, complications of labor and/or delivery and abnormal conditions of the newborn are taken from the Hollister Maternal/Newborn Record System, which is widely used in many obstetric offices.

The certificate of birth was revised again in January 2004. This revision accompanied the implementation of a web-based electronic birth registration system (web Birth). Substantial changes were made to the medical portion of the certificate, including removal of 'other' check/box items and the addition of section names. Several items were added to address data collection needs and to facilitate the linkage of data sets. Another change is the use of standardized worksheets to improve the completeness and quality of birth data.

The 1989 revision of the Fetal Death Report, like the Certificate of Live Birth, largely pertain to the medical conditions of the mother, labor/delivery, and condition of the fetus. The data on these variables are not reported in this publication, since the quality of these variables has not been assessed to assure the accuracy of the data.

The Certificate of Death has remained essentially the same for many years. However, the 1989 revision of the form was an attempt to improve the accuracy of the data reported in the medical certification section of the certificate by including instructions for completing the medical certification on the front of the certificate and, in more detail, on the back. Additionally, the revised certificate allows a physician to pronounce and certify only to the time and place of death in cases where the attending physician is unavailable and the death is clearly not a medical-legal case. The funeral director can then contact the attending physician to obtain the medical certification later. This revision allows funeral directors the ability to file death certificates in a more timely manner, as well as improve the quality and completeness.

The 1989 and 2004 revisions to the vital records forms and systems were intended to make the vital statistics system more responsive to public health concerns for high quality data.

## ALLOCATIONS OF EVENTS BY RESIDENCE OR OCCURRENCE

With respect to geographic allocation of vital events, the data may be compiled either by place of residence or by place of occurrence.

**RESIDENCE DATA** are allocated in the place in South Carolina where the person normally resided regardless of where the event occurred. A cooperative system of interstate exchange of transcripts of birth and death records permits events occurring to South Carolina residents in other states to be included in the South Carolina residents tabulations. In these tabulations, births are allocated to the county of the mother's residence and deaths are allocated of the county of residence of the decedent. Since there is no interstate exchange of transcripts of marriage and divorce records, these statistics are limited to those events which occurred in South Carolina.

**OCCURRENCE DATA** are allocated in the place of South Carolina where the event occurred, regardless of the usual residence of the person involved. Both residence and occurrence data are useful for different purposes. Occurrence data represent the requirements for hospitals and other facilities. These types of data may help to determine such needs as maternity services, intensive care facilities for newborn babies, or emergency room facilities. Residence data are more properly utilized in measuring the fertility and the incidence of death in the population living in an area.

### PLACE OF RESIDENCE OR OCCURRENCE IN 2004

	BIRTHS			DEATHS		
	TOTAL	WHITE	BLACK & OTHER	TOTAL	WHITE	BLACK & OTHER
Occurring in S.C.	54,240	35,086	19,099	36,482 *	25,951	10,530
Residents of S.C.	53,679	34,669	18,956	35,543 *	25,187	10,355
Non-Residents	561 *	417	143	939	764	175
Occurring to S.C. Residents	56,543 *	36,872	19,616	37,1520 *	26,353	10,783
In South Carolina	53679	34,669	18,956	35,543 *	25,187	10,355
Out-Of-State	2,864 *	2,203	660	1,609 *	1,166	428

\* Includes Unknown Races

NOTE: Events to South Carolina residents on military status outside of the United States are not reflected in these tabulations.

## DEFINITIONS OF TERMS

**ABORTION:** Purposeful termination of pregnancy with intention other than to produce a live born infant or to remove a dead fetus.

**FETAL DEATH:** Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. (Definition recommended by World Health Organization in 1950). A fetal death is required to be reported if the fetus has completed or passed the twentieth week of gestation or weighs 350 grams or more. (Weight criteria effective in 1978). Vital Statistics Laws and Regulations 61-19: Vital Statistics, Section 21(a). **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

**INFANT DEATH:** Death of a live born infant under one year of age.

**LIVE BIRTH:** The complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. (Definition recommended by World Health Organization in 1950). **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

**VERY LOW BIRTH WEIGHT:** Very low birth weight is a weight at birth, which is less than 1,500 grams (3 pounds, 4 ounces), regardless of the period of gestation.

**LOW BIRTH WEIGHT:** Low birth weight is a weight at birth, which is less than 2,500 grams (5 pounds, 8 ounces), regardless of the period of gestation.

### **MARITAL STATUS ON BIRTH CERTIFICATE:**

Unmarried - a birth which occurs to a woman who has never been married or who has been widowed or legally divorced from her husband in excess of 280 days.

Married - a birth, which occurs to a woman who has been married or was married within 280 days from conception.

Paternity acknowledgment - gives authorization to list the name of the father on the birth certificate of a child born to an unmarried mother with written consent of the father and mother by means of an affidavit as required by South Carolina Law, Section 44-63-165. For statistical purposes, paternity acknowledgments are included in the "married" category.

**MATERNAL DEATH:** Death of a woman whose cause of death is assigned to Complications of Pregnancy, Childbirth, and Puerperium (Tenth Revision ICD O00-O99). If death occurred more than 42 days after termination of pregnancy, the death is not considered to be pregnancy-related and is not assigned to codes O00-O99.

**MULTIPLE CAUSES OF DEATH:** A system of coding all of the medical entities reported on the death certificate.

**NATURAL INCREASE:** The increase in the population due to an excess of births over deaths for a particular period.

**NEONATAL DEATH:** Death of a live born infant under 28 days of age.

**OCCURRENCE DATA:** Data allocated to the place in South Carolina where the event occurred, regardless of the usual residence of the person involved.

**PERINATAL DEATH:** Death occurring during the perinatal period (i.e. to a live born infant less than 28 days of age or a fetus that has passed the twentieth week of gestation or weighs 350 grams or more).

**POSTNEONATAL DEATH:** Death of a live born infant 28-364 days of age.

**RESIDENCE DATA:** Data allocated to the place in South Carolina where the person normally resided, regardless of where the event occurred.

**UNDERLYING CAUSE OF DEATH:** The disease or injury that initiated the train of morbid events leading directly to death. (International Classification of Disease).

**YEARS OF POTENTIAL LIFE LOST (YPLL):** YPLL is defined as the number of years of potential life lost by each death occurring before a predetermined end point, usually age 65 or age 75. YPLL rates are per 100,000 population who are younger than the age of the end point.

## INTERPRETATION OF DATA

**RACE:** Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the decedent is reported on death certificates. Fetal deaths are reported by race of mother. As of 1990, Live Births are reported by race of mother instead of race of child. This change allows South Carolina's birth data to be consistent with the National Center for Health Statistics and other states throughout the United States. The race on reported marriages where the license was issued in South Carolina is by the race of groom and on divorces and annulments granted in South Carolina is by the race of husband. For statistical purposes, the tables in this report are based on the broad classifications of "white" and "black and other". Blacks make up 95.8 percent of the black and other population of South Carolina.

**PATERNITY ACKNOWLEDGMENT:** For statistical purposes, paternity acknowledgments are included in the married category. In 2004 there were 8,829 paternity acknowledgments representing 15.6 percent of the total resident live births and 21.2 percent of all live births to married women in South Carolina.

**COMPARABILITY:** In order that disease classifications may be consistent with advances in medical science and changes in diagnostic practice, any system for categorizing causes of death must periodically be revised. Major revisions in the International Classification of Diseases (ICD), by which causes of death are classified, occur approximately every ten years, and each decennial revision of the ICD has produced some break in comparability of cause of death statistics. In South Carolina, the Sixth Revision of the ICD was used from 1949-1957; the Seventh Revision for 1958-1968; the Eighth 1969-1978; and the Ninth Revision went 1979-1998; and the Tenth Revision went into effect in 1999.

Prior to 1949, under the first five revisions, cause of death was selected on the basis of priority tables for multiple causes, as set forth in The Manual For Joint Causes of Death. Under the Sixth, Seventh, Eighth, and Ninth Revisions of the International Lists, the cause selected for tabulation has been the "underlying" cause, defined as the "disease or injury which initiated the train of morbid events, leading directly to death." (ICDA, Eighth Revision, 1968, Vol. 1, page xxix).

The introduction of the concept of "underlying" cause in 1949, with the Sixth Revision, resulted in a basic change in classification of death, which seriously affects the interpretation of mortality trends before and after 1949. The Seventh Revision was essentially a clarification of the Sixth Revision, but the Eighth Revision introduced some major modifications in classification lists and coding procedures. The Ninth Revision also brought some major changes in classification and coding. However, the Tenth Revision introduced some of the most dramatic changes so far.

In order to make valid comparisons of mortality by cause for events classified by different revisions of the ICD, comparability ratios were developed. Comparability ratios are computed by the National Center for Health Statistics from the results of dual coding of certificates according to the old and the new procedures. Taking the number of deaths classified to a given cause by the Tenth Revision and dividing the result by the number of deaths classified to that cause by the Ninth Revision derived the comparability ratios used with the Tenth Revision. Provisional comparability ratios for the United States as a whole, based on the Ninth and Tenth Revisions, have been developed for a limited number of causes published by the National Center for Health Statistics. Tables are included in the Appendix portion of this report.

**RATE CALCULATIONS WITH SMALL NUMBERS:** There are variations in all statistics that are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure. As an example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in these crude rates. For this reason, rates for counties with small populations or other small bases should be used cautiously. In this report, rates are not calculated for places of less than 2,500 population or when the number of events is less than 3 for a particular category, due to the known instability of rates based on small numbers. In the Perinatal Section, 3-year rates are calculated to provide a more stable base for comparison of trends over time.

**MEDICAL CERTIFICATION OF DEATH:** Only a person authorized by law, usually a physician or a coroner, can make the medical certification of death. Thus, the reliability and accuracy of cause-of-death statistics are, to a large extent, governed by the acumen and ability of the doctor or coroner to make the proper diagnosis and by the care with which the death certificate is completed. It is recognized that death may not result from a single morbid condition. Since 1980, South Carolina medical certifiers have been asked to provide contributing conditions adding to the underlying cause of death information. Nineteen hundred eighty-eight is the first year that multiple cause information was included in this report.

**MULTIPLE CAUSE OF DEATH:** Cause of death statistics have, for many years, been based only on the underlying cause of death, the single disease or injury that initiated the train of events leading to death or the circumstances of the accident that produced the fatal injury. The underlying cause is selected by a computerized algorithm called the Automated Classification of Medical Entities (ACME) from the ordering of conditions reported by physicians or coroners on the death certificate. Analysis of the underlying cause of death information allows for simplified, consistent reporting of data and provides a means of evaluating the impact of public health initiatives. When more than one cause is reported on the certificate, however, the tabulation of only one cause for mortality statistics may lead to a loss of information on any condition that is an element in the death but that is not selected as the underlying cause of death. Cause-of-death statistics are usually based on the underlying cause of death, a single disease or injury circumstance that initiated the sequence of events leading to death. In this system, each death is assigned one underlying cause of death. However, death certificates provide for the inclusion of more information than the underlying cause of death alone. The immediate cause of death, the antecedent causes giving rise to the immediate cause, and other significant conditions contributing to the death also maybe entered by the medical certifier. These data provide a way of estimating the impact of significant co-factors contributing to a death and offer a means of utilizing information on causes, such as hypertension, asthma, bronchitis, and diabetes, that are frequently present at death but that are usually not lethal by themselves. Each death is assigned one underlying cause and up to nineteen contributing causes of death.

**CLASSIFICATION AND METHODOLOGY IN DETERMINING LEADING CAUSES OF INFANT DEATH:** The leading causes of infant mortality in this report are based on the National Center for Health Statistics (NCHS) list of 130 selected causes of infant mortality. The same methodology used by NCHS to rank the causes of infant death has also been adopted for this report. This change represents an attempt to standardize reporting of South Carolina data to the national model. The broad categories of cause of death used in determining the leading causes of infant death have been subdivided into more specific categories. This change in methodology makes the leading causes of infant death tables in this report not comparable to similar tables in the reports of years prior to 1998.

**YEARS OF POTENTIAL LIFE LOST RATES:** Years of Potential Life Lost (YPLL) is a commonly used method of measuring the rate of premature death. YPLL rates identify untimely deaths in a way the traditional mortality rate cannot. YPLL is defined as the number of years of potential life lost by each death occurring before a predetermined end point. Ages 65 and 75 are often selected as end points, since age 65 approximates the usual retirement age and 75 years, the average life expectancy. The YPLL rate weights each death according to the number of years of life lost prior to the selected end point. Deaths occurring at younger ages are weighted more heavily than those occurring at older ages. To calculate the number of years of potential life lost, the age at last birthday of each death is subtracted from the selected end point. For this publication, these values are summed for all deaths and by selected cause of death for all races and by race group. Only deaths occurring at ages younger than the end point are included. YPLL rates are per 100,000 population who are younger than the age of the end point.

**POPULATION DATA:** South Carolina population estimates for 2004 were available from the National Center for Health Statistics (NCHS) for the state as a whole and for each county by age, race, and gender. In order to provide rates for vital records data by single race category, NCHS developed a 'bridging' methodology, which regrouped the population of the Census, designated 'multiple race' categories into single race categories. The 2000 Census was the first nationwide implementation of revised standards requiring federal agencies to offer individuals the opportunity to select one or more races. NCHS population estimates by age and gender category are consistent with corresponding population data provided to the Office of Research and Statistics, South Carolina Budget and Control Board by the US Census Bureau for the state as a whole and for each county. For age groups of 14-17, 15-17, and 18-19 years, it is assumed that the population within the five-year age groups of 10-14 and 15-19 is distributed uniformly throughout these age intervals.

### Grams Weight Conversion Chart

---

500 grams or less	=	1lb. 1 oz. or less
501 - 1,000 grams	=	1 lb. 2 oz. - 2 lb. 3 oz.
1,001 - 1,500 grams	=	2 lb. 4 oz. - 3 lb. 4 oz.
1,501 - 2,000 grams	=	3 lb. 5 oz. - 4 lb. 6 oz.
2,001 - 2,500 grams	=	4 lb. 7 oz. - 5 lb. 8 oz.
2,501 - 3,000 grams	=	5 lb. 9 oz. - 6 lb. 9 oz.
3,000 - 3,500 grams	=	6 lb. 10 oz. - 7 lb. 11 oz.
3,501 - 4,000 grams	=	7 lb. 12 oz. - 8 lb. 13 oz.
4,001 - 4,500 grams	=	8 lb. 14 oz. - 9 lb. 14 oz.
4,501 - 5,000 grams	=	9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more	=	11 lb. 1 oz. - or more

### Symbols Used in Tables

---

Class or Item not applicable	...
Data not available	---
Quantity Zero in frequency tables	-
Quantity Zero in rate or percent tables	0
Rate or percent more than 0 but less than 0.05	0.0
Both frequency and population base zero in rate or percent table	-
Figures in parentheses are not included in tables	( )

Kotelchuck Index:

The Adequacy of Prenatal Care Utilization (APNCU) Index created by Milton Kotelchuck, Ph.D., M.P.H. attempts to characterize prenatal care (PNC) utilization on two independent and distinctive dimensions - namely adequacy of initiation of PNC and adequacy of received services (once PNC has begun). The index uses information readily available on U.S. birth certificates (month of initial PNC visit, number of visits, and gestational age). It is a major improvement over existing indices, and is consistent with the 1985 American College of Obstetricians and Gynecologist (ACOG) recommendations for PNC utilization. This index does not assess quality of the prenatal care that is delivered, only its utilization.

Summary Adequacy of Prenatal Care Utilization Index: Definitions

- a. Adequate Plus = PNC initiation begun in month 1, 2, 3, or 4  
and 110% or more expected PNC visits were received
- b. Adequate = PNC initiation begun in month 1, 2, 3 or 4  
and 80% to 109% of expected PNC visits were received
- c. Intermediate = PNC Initiation begun in month 1, 2, 3, or 4  
and 50% to 79% of expected PNC visits were received
- d. Inadequate = PNC initiation begun in month 5 or later or less than  
50% of expected PNC visits were received
- e. Unknown = PNC information not recorded

**LIST OF 113 SELECTED CAUSES OF DEATH**

Number	Cause of death
	All causes.....
1#	Salmonella infections..... A01-A02
2#	Shigellosis and amebiasis..... A03, A06
3	Certain other intestinal infections..... A04, A07- A09
#	Tuberculosis..... A16-A19
4	Respiratory tuberculosis..... A16
5	Other tuberculosis..... A17- A19
6#	Whooping cough..... A37
7#	Scarlet fever and erysipelas..... A38, A46
8#	Meningococcal infection..... A39
9#	Septicemia..... A40- A41
10#	Syphilis..... A50- A53
11#	Acute poliomyelitis..... A80
12#	Arthropod-borne viral encephalitis..... A83- A84, A85. 2
13#	Measles..... B05
14#	Viral hepatitis..... B15- B19
15#	Human immunodeficiency virus (HIV) disease..... B20- B24
16#	Malaria..... B50- B54
17	Other and unspecified infectious and parasitic diseases and their sequelae ..... A00, A05, A20- A36, A42- A44, A48- A49, A54- A79, A81- A82, A85. 0- A85. 1, A85. 8, A86- B04, B06- B09, B25- B49, B55- B99
#	Malignant neoplasms..... C00- C97
18	Malignant neoplasms of lip, oral cavity and pharynx..... C00- C14
19	Malignant neoplasm of esophagus..... C15
20	Malignant neoplasm of stomach..... C16
21	Malignant neoplasms of colon, rectum and anus..... C18- C21
22	Malignant neoplasms of liver and intrahepatic bile ducts..... C22
23	Malignant neoplasm of pancreas..... C25
24	Malignant neoplasm of larynx..... C32
25	Malignant neoplasms of trachea, bronchus and lung..... C33- C34
26	Malignant melanoma of skin..... C43
27	Malignant neoplasm of breast..... C50
28	Malignant neoplasm of cervix uteri..... C53
29	Malignant neoplasms of corpus uteri and uterus, part unspecified..... C54- C55
30	Malignant neoplasm of ovary..... C56
31	Malignant neoplasm of prostate..... C61
32	Malignant neoplasms of kidney and renal pelvis..... C64- C65
33	Malignant neoplasm of bladder..... C67
34	Malignant neoplasms of meninges, brain and other parts of central nervous system..... C70- C72
	Malignant neoplasms of lymphoid, hematopoietic and related tissue..... C81- C96
35	Hodgkin's disease..... C81
36	Non-Hodgkin's lymphoma..... C82- C85
37	Leukemia..... C91- C95
38	Multiple myeloma and immunoproliferative neoplasms..... C88, C90
39	Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue..... C96
40	All other and unspecified malignant neoplasms..... C17, C23- C24, C26- C31, C37- C41, C44- C49, C51- C52, C57- C60, C62- C63, C66, C68- C69, C73- C80, C97
41#	In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior..... D00- D48
42#	Anemias..... D50- D64
43#	Diabetes mellitus..... E10- E14
#	Nutritional deficiencies..... E40- E64
44	Malnutrition..... E40- E46
45	Other nutritional deficiencies..... E50- E64
46#	Meningitis..... G00, G03
47#	Parkinson's disease..... G20- G21
48#	Alzheimer's disease..... G30
#	Major cardiovascular diseases..... I00- I78
	Diseases of heart..... I00- I09, I11, I13, I20- I51
49	Acute rheumatic fever and chronic rheumatic heart diseases..... I00- I09
50	Hypertensive heart disease..... I11

LIST OF 113 SELECTED CAUSES OF DEATH-Con.

Number	Cause of death
51	Hypertensive heart and renal disease..... I13
	Ischemic heart diseases..... I20- I25
52	Acute myocardial infarction..... I21- I22
53	Other acute ischemic heart diseases..... I24
	Other forms of chronic ischemic heart disease..... I20, I25
54	Atherosclerotic cardiovascular disease, so described..... I25. 0
55	All other forms of chronic ischemic heart disease..... I20, I25. 1- I25. 9
	Other heart diseases..... I26- I51
56	Acute and subacute endocarditis..... I33
57	Diseases of pericardium and acute myocarditis..... I30- I31, I40
58	Heart failure..... I50
59	All other forms of heart disease..... I26- I28, I34- I38, I42- I49, I51
60#	Essential (primary) hypertension and hypertensive renal disease..... I10, I12
61#	Cerebrovascular diseases..... I60- I69
62#	Atherosclerosis..... I70
	Other diseases of circulatory system..... I71- I78
63#	Aortic aneurysm and dissection..... I71
64	Other diseases of arteries, arterioles and capillaries..... I72- I78
65	Other disorders of circulatory system..... I80- I99
#	Influenza and pneumonia..... J10- J18
66	Influenza..... J10- J11
67	Pneumonia..... J12- J18
	Other acute lower respiratory infections..... J20- J22
68#	Acute bronchitis and bronchiolitis..... J20- J21
69	Unspecified acute lower respiratory infection..... J22
#	Chronic lower respiratory diseases..... J40- J47
70	Bronchitis, chronic and unspecified..... J40- J42
71	Emphysema..... J43
72	Asthma..... J45- J46
73	Other chronic lower respiratory diseases..... J44, J47
74#	Pneumoconioses and chemical effects..... J60- J66, J68
75#	Pneumonitis due to solids and liquids..... J69
76	Other diseases of respiratory system..... J00- J06, J30- J39, J67, J70- J98
77#	Peptic ulcer..... K25- K28
78#	Diseases of appendix..... K35- K38
79#	Hernia..... K40- K46
#	Chronic liver disease and cirrhosis..... K70, K73- K74
80	Alcoholic liver disease..... K70
81	Other chronic liver disease and cirrhosis..... K73- K74
82#	Cholelithiasis and other disorders of gallbladder..... K80- K82
#	Nephritis, nephrotic syndrome and nephrosis..... N00- N07, N17- N19, N25- N27
83	Acute and rapidly progressive nephritic and nephrotic syndrome..... N00- N01, N04
84	Chronic glomerulonephritis, nephritis and nephritis not specified as acute or chronic, and renal sclerosis unspecified..... N02- N03, N05- N07, N26
85	Renal failure..... N17- N19
86	Other disorders of kidney..... N25, N27
87#	Infections of kidney..... N10- N12, N13. 6, N15. 1
88#	Hyperplasia of prostate..... N40
89#	Inflammatory diseases of female pelvic organs..... N70- N76
#	Pregnancy, childbirth and the puerperium..... 000- 099
90	Pregnancy with abortive outcome..... 000- 007
91	Other complications of pregnancy, childbirth and the puerperium..... 010- 099
92#	Certain conditions originating in the perinatal period..... P00- P96
93#	Congenital malformations, deformations and chromosomal abnormalities..... Q00- Q99
94	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified..... R00- R99
95	All other diseases (Residual)..... D65- E07, E15- E34, E65- F99, G04- G12, G23- G25, G31- H93, K00- K22, K29- K31, K50- K66, K71- K72, K75- K76, K83- M99, N13. 0- N13. 5, N13. 7- N13. 9, N14, N15. 0, N15. 8- N15. 9, N20- N23, N28- N39, N41- N64, N80- N98
#	Accidents..... V01- X59, Y85- Y86
	Transport accidents..... V01- V99, Y85
96	Motor vehicle accidents..... V02- V04, V09. 0, V09. 2, V12- V14, V19. 0- V19. 2, V19. 4- V19. 6, V20- V79, V80. 3- V80. 5, V81. 0- V81. 1, V82. 0- V82. 1, V83- V86, V87. 0- V87. 8, V88. 0- V88. 8, V89. 0, V89. 2
