Acknowledgements

This data book was prepared under the guidance of Shae Sutton, PhD, Director of the Division of Biostatistics, Guang Zhao, Director of Public Health Statistics and Information Services and MCH Bureau colleague Brenda Y. Martin, Director of the Bureau of Maternal & Child Health, SC DHEC.

Rui Zhang completed the analyses for vital records data and editing for 2009 MCH data book. Statistics for Section IV were from MCH program areas and provided by Eleanor Olden, Research and Statistical Analyst, David Thomas, Program Coordinator, Wanda Tyler, Statistical & Research Analyst.

INTRODUCTION

This report is the product of the collaboration between the Division of Biostatistics, Office of Public Health Statistics and Information Services (PHSIS) and the Bureau of Maternal & Child Health, South Carolina Department of Health and Environmental Control. The Division of Biostatistics, is the data source for Sections I, II, and III (vital statistics); and the Bureau of Maternal & Child Health provides Women, Infants, and Children (WIC) and Women and Children's Services (WCS) information (Section IV).

Population estimates with bridged race categories for the intercensal years were prepared by the National Center for Health Statistics.

While some data are presented in three years combined or as a trend for the past 10 years, the majority of this report contains vital statistics data for South Carolina events that occurred in 2007 to South Carolina residents. However, data from the MCH programs (in Section IV) are for fiscal year 2007 or 2008. The purpose of this report is to provide basic reference data for a variety of users.

A new Electronic Birth Registration System (EBRS) was implemented along with a revised certificate of birth in 2004. A new revised death certificate was also implemented in 2005. The new certificates contain additional variables as well as modifications of previous variables. This may affect comparisons of variables to the previous years.

Vital Statistics data including certificates of live births, deaths and reports of fetal deaths and induced terminations are for South Carolina residents only. Live births, fetal deaths and deaths occurring out-of-state to South Carolina residents are included in this data. Event information is re-allocated to the state of residence through an agreement of interstate transcript exchange.

Statistics for "Other" race group and/or "Hispanic" are not reported in some table series in this report due to small numbers. The federal government considers race and Hispanic origin to be two separate and distinct concepts. A person of Hispanic origin may be of any race. Thus, the tables for Hispanic and other races are not mutually exclusive.

Throughout this data book, "All Races" includes unknown races unless specified otherwise.

This report is available on the Internet at the web address:

<http://www.scdhec.net/co/phsis/biostatistics/index.asp?page=pubreps>

More MCH data are available at South Carolina Community Assessment Network (SCAN) website:

<http://scangis.dhec.sc.gov/scan/>

SCAN is an interactive data retrieval system for community assessment, planning and health practices. Users can create tables, charts, and maps according to their interests and specifications at DHEC region, county, or zip code level. Modules include Birth Certificate Data, Death Certificate Data, Population Data, Childhood Lead Surveillance, PRAMS (Pregnancy Risk Assessment Monitoring System), Pregnancy data, Fetal Death data, Mother's Health and Lifestyle data, Infant and Child Health data, Infant Mortality data, and Cancer Mortality and Incidence data from the SC Central Cancer Registry (SCCCR). The newest module is the Community Profile Module (CPM) that assesses the indicators of the public health interests across South Carolina at county and DHEC Region levels.

Requests for more detailed statistics pertaining to vital events, as well as suggestions and comments may be submitted to:

Section I. Executive Summary

Section I. Executive Summary

The Good News:

South Carolina has made some progress in maternal and child health, and the improvements include (but are not limited to):

- ◆ One-year fetal mortality rate declined from 9.8 per 1000 live births and fetal deaths in 2006 to 9.1 in 2007. (p. I-3)
- ◆ Postneonatal mortality rate remained unchanged from 2006 to 2007 at 2.9 per 1000 live births. (p. I-6)
- ◆ Percent of mothers who received Adequate prenatal care according to Kotelchuck Index increased from 70.2% in 2006 to 71.5% in 2007. (p. I-9)
- ◆ Percent of live births receiving prenatal care in first trimester of pregnancy increased from 67.2% in 2006 to 68.6% in 2007. (p. I-10)
- ◆ Percent of live births occurring to mothers who smoked during pregnancy declined from 13.2% in 2006 to 12.0% in 2007. Rate also declined for each race group. (p. III-13)

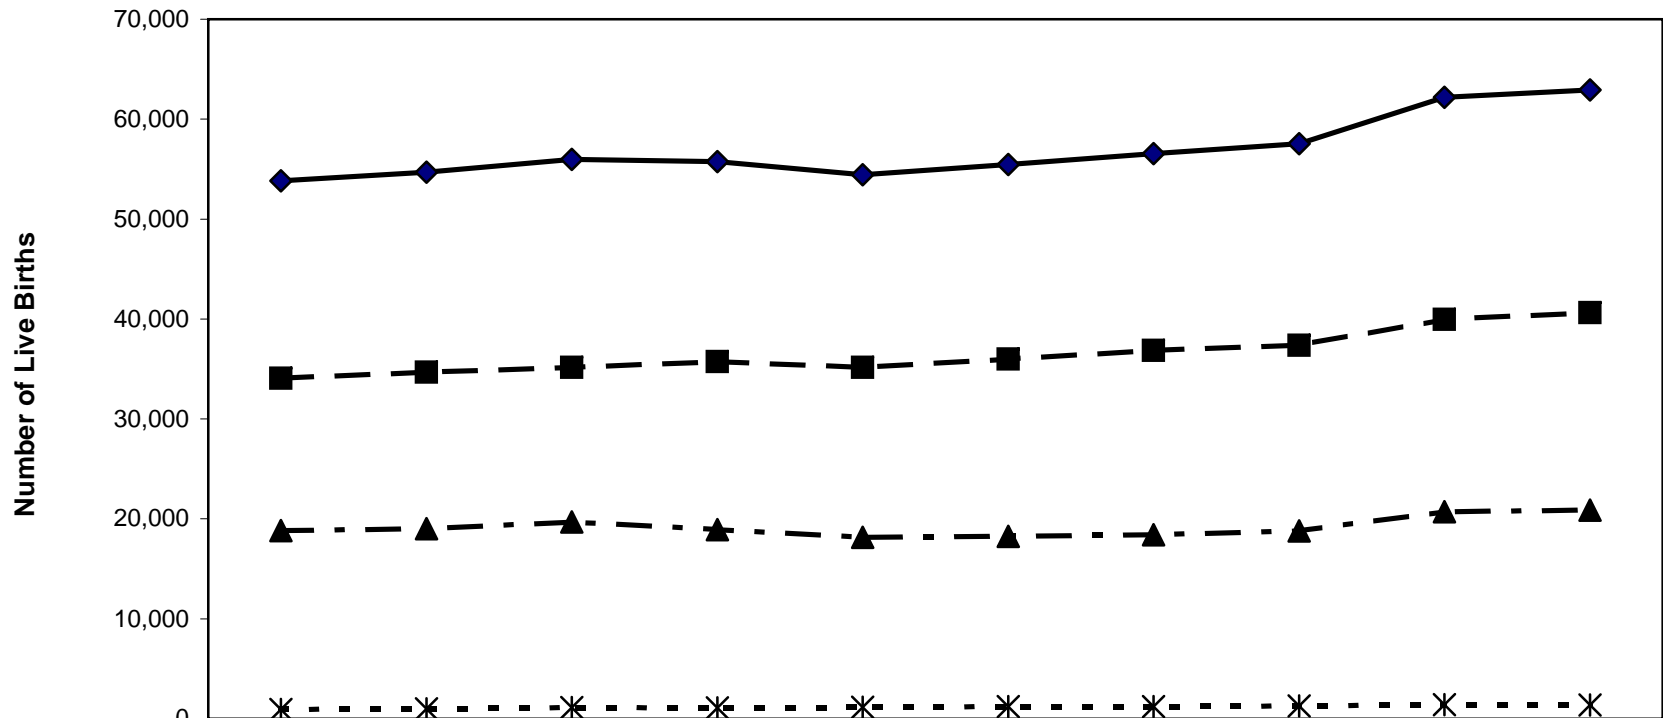

Every Day in South Carolina, 2007:

On an average day in South Carolina during 2007, there were:

- ◆ 172 live births to South Carolina resident mothers
- ◆ 80 infants born to unmarried mothers.
- ◆ 21 infants born to mothers who smoked during pregnancy
- ◆ 21 infants born with less than 37 weeks of clinical estimate of gestation and 4 of them were less than 32 weeks
- ◆ 18 infants born with LBW (< 2,500 grams)
- ◆ 4 infants born with VLBW (< 1,500 grams)
- ◆ 17 infants born to Hispanic mothers
- ◆ 95 infants born to Non-Hispanic white mothers
- ◆ 60 infants born to Non-Hispanic black mothers
- ◆ 7 infants born to mothers under 18

Note: The reported numbers are rounded.

**Fig. Percent Of Live Births Whose Mothers Received PNC In 1st Trimester,
South Carolina (Residence Data), 1998-2007**

* As of 2004, the month prenatal care began is no longer indicated on the new birth certificate. Instead, month prenatal care began is now determined from the date of last normal menses and the date of first prenatal care visit. This affects the comparability of PNC before and after year 2004.

DISCLAIMER:

Infant numbers maybe be inflated due to participants being served in counties other than which they live. Often participants live in one county, but are served in a neighboring county, thereby inflating that counties number of participants and lowering the number of participants served in the county in which they truly reside.

* Include Primary Care Centers

Section V. Technical Notes

DEFINITIONS OF TERMS

RESIDENCE DATA: Data allocated to the place in South Carolina where the person normally resided, regardless of where the event occurred.

FETAL DEATH: Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. (Definition recommended by World Health Organization in 1950). A fetal death is required to be reported if the fetus has completed or passed the twentieth week of gestation or weighs 350 grams or more. (Weight criteria effective in 1978). Vital Statistics Laws and Regulations 61-19: Vital Statistics, Section 21(a). **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

INFANT DEATH: Death of a live born infant under one year of age.

LIVE BIRTH: The complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. (Definition recommended by World Health Organization in 1950). **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

VERY LOW BIRTH WEIGHT: Very low birth weight is a weight at birth which is less than 1,500 grams (3 pounds, 4 ounces), regardless of the period of gestation.

LOW BIRTH WEIGHT: Low birth weight is a weight at birth which is less than 2,500 grams (5 pounds, 8 ounces), regardless of the period of gestation.

MARITAL STATUS ON BIRTH CERTIFICATE:

Unmarried - a birth which occurs to a woman who has never been married or who has been widowed or legally divorced from her husband in excess of 280 days.

Married - a birth which occurs to a woman who has been married or was married within 280 days from conception.

MATERNAL DEATH: Death of a woman whose cause of death is assigned to Complications of Pregnancy, Childbirth, and Puerperium (Tenth Revision ICD O00-O99). If death occurred more than 42 days after termination of pregnancy, the death is not considered to be pregnancy-related and is not assigned to codes O00-O99.

NEONATAL DEATH: Death of a live born infant under 28 days of age.

PERINATAL DEATH: Death occurring during the perinatal period (i.e. to a live born infant less than 28 days of age and a fetus that has passed the twentieth week of gestation or weighs 350 grams or more).

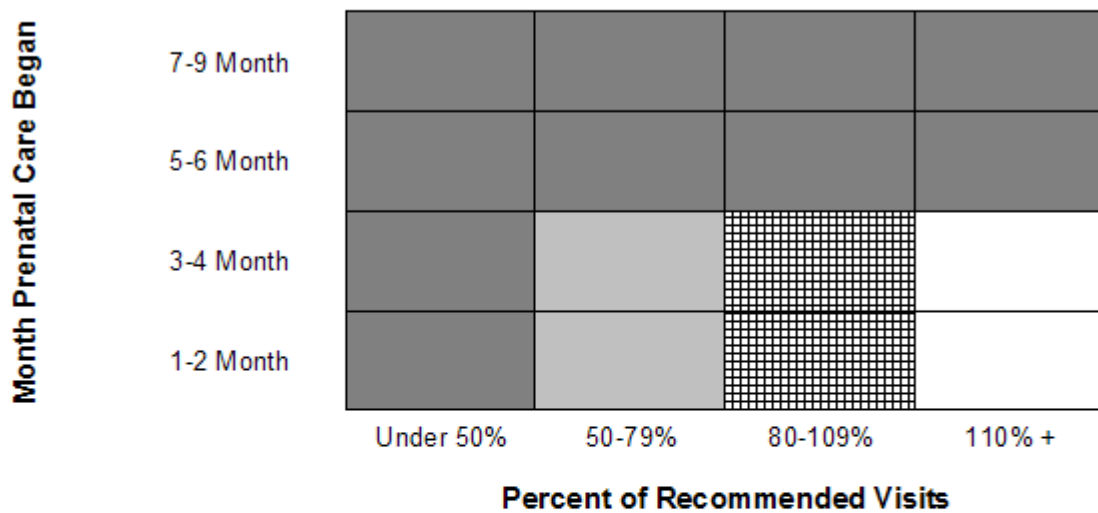

POSTNEONATAL DEATH: Death of a live born infant 28-364 days of age.

KOTELCHUCK INDEX: The Kotelchuck Index, also called the Adequacy of Prenatal Care Utilization (APNCU) Index, uses two crucial elements obtained from birth certificate data - when prenatal care began (initiation) and the number of prenatal visits from when prenatal care began until delivery (received services). The Kotelchuck Index classifies the adequacy of initiation as follows: pregnancy months 1 and 2, months 3 and 4, months 5 and 6, and months 7 to 9, with the underlying assumption that the earlier prenatal care begins the better. To classify

the adequacy of received services, the number of prenatal visits is compared to the expected number of visits for the period between when care began and the delivery date. The expected number of visits is based on the American College of Obstetricians and Gynecologists prenatal care standards for uncomplicated pregnancies and is adjusted for the gestational age when care began and for the gestational age at delivery.

A ratio of observed to expected visits is calculated and grouped into four categories-Inadequate (received less than 50% of expected visits), Intermediate (50%-79%), Adequate (80%-109%), and Adequate Plus (110% or more). The final Kotelchuck Index measure combines these two dimensions into a single summary score. The profiles define adequate prenatal care as a score of 80% or greater on the Kotelchuck Index, or the sum of the Adequate and Adequate Plus categories. As shown in the graph below.

The Summary of Adequacy of Kotelchuck Index¹

-  **Inadequate** - Prenatal care begun after 4th month, or less than 50% of recommended visits. Includes no prenatal care received.
-  **Intermediate** - Prenatal care begun by 4th month, and 50% - 79% of recommended visits.
-  **Adequate** - Prenatal care begun by 4th month, and 80% - 109% of recommended visits.
-  **Adequate Plus** - Prenatal care begun by 4th month, and 110% or more of recommended visits.

¹ Adapted from Kotelchuck M., "An Evaluation of the Kessner Adequacy of Prenatal Care Index and a Proposed Adequacy of Prenatal Care Utilization Index", American Journal of Public Health, 1994, 84(9): 1414-20.

The Kotelchuck Index does not measure the quality of prenatal care. It also depends on the accuracy of the patient or health care provider's recall of the timing of the first visit and the number of subsequent visits. The Kotelchuck Index uses recommendations for low-risk pregnancies, and may not measure the adequacy of care for high-risk women. The Kotelchuck Index is preferable to other indices because it includes a category for women who receive more than the recommended amount of care (adequate plus, or intensive utilization).

INTER-PREGNANCY INTERVAL: The time period (in months) between the conception date of this pregnancy and the date of last pregnancy outcome (could be live birth, abortion, fetal death, etc).

INTERPRETATION OF DATA

RACE: Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the decedent is reported on death certificates. Fetal deaths are reported by race of mother. As of 1990, Live Births are reported by race of mother instead of race of child. This change allows South Carolina's birth data to be consistent with the National Center for Health Statistics and other states throughout the United States. For statistical purposes, the tables in this report are based on the broad classifications of "white", "black" and "other". Starting year 2004, a new birth certificate is implemented and multiple races can be checked. A methodology was developed that would regroup the 'multiple race' into standard single race categories. This methodology was developed by the National Center for Health Statistics (NCHS) and the bridged races are returned to the Division of Biostatistics, Public Health Statistics and Information Services.

MISSING RACE: In some of the tables or charts, "All races" category includes record with missing race information, which is not included in any of "white", "black" and "other" category. Thus the sum of "white", "black" and "other" category may be less than "All races" category number.

RATE CALCULATIONS WITH SMALL NUMBERS: There are variations in all statistics that are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure. As an example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in these crude rates. For this reason, rates for counties with small populations or other small bases should be used cautiously. In this report, rates are not calculated for places of less than 2,500 population or when the number of events is less than 3 for a particular category, due to the known instability of rates based on small numbers. In the Perinatal Section, 3-year rates are calculated to provide a more stable base for comparison of trends over time.

POPULATION DATA BY RACE: At the time of this publication, population files released by the U.S. Census Bureau contain data for a "multiple race" category and for single race categories (including an "other/non-Census designated race" category). This presents problems for vital rates from two standpoints: first, these population files contain counts of persons with more than one race and therefore are not compatible with vital statistics numerators which contain information for persons by single race category, second, the population files contain the "other/non-Census designated race" category which is not used to calculate vital statistics rates.

In order to provide rates by single race category of 'white' and 'black and other' for South Carolina vital events, a methodology was developed that would regroup the populations of the race categories, 'multiple race' and 'other/non-Census designated race', into standard single race categories. This methodology was developed by the National Center for Health Statistics (NCHS) and the bridged races are returned to the Division of Biostatistics, Public Health Statistics and Information Services.

POPULATION DATA FOR SELECTED AGE GROUPS: It is assumed that the population within age categories 10-14 and 15-19 are distributed uniformly throughout the age interval. Based on this assumption, the population for females 14-17, 15-17 and 18-19 years is derived, consecutively, as follows – (20% of the female population 10-14 years plus 60% of the female population 15-19 years), (60% of the female population 15-19), and (40% of

the female population 15-19). Pregnancy data for these teenagers are published annually in the South Carolina Vital and Morbidity Statistics reports and also in the South Carolina Teen Pregnancy Data Book(s).

In order to provide population data derived in a consistent manner over time, the 2000 population counts for these age groups are determined in like manner. These population estimates, rounded to the nearest 10, and the pregnancy rates are provided in the 'Teen Pregnancy' Section of this publication.

IMPLEMENTATION OF THE INTERNATIONAL CLASSIFICATION OF DISEASES (ICD) 10TH REVISION

The ICD is a classification system developed collaboratively between the World Health Organization (WHO) and 10 international centers so that the medical terms reported by physicians, medical examiners, and coroners on death certificates can be grouped together for statistical purposes. ICD-10 replaces the ICD-9, used with 1979-1998 data.

The purpose of the ICD and of WHO sponsorship is to promote international comparability in the collection, classification, processing and presentation of mortality statistics. New revisions of the ICD are implemented periodically so that the classification reflects advances in medical science.

ICD-10 affects the classification, processing, and presentation of mortality data. Some titles have changed. The total number of categories has doubled as a result of the addition or deletion of terms used to describe diseases or conditions. The transfer of certain diseases from one section to another reflects new discoveries and advances in knowledge on the nature or causes of particular diseases. The addition of separate categories identifies specific diseases or particular complications of diseases that are of growing interest. Additionally, the codes associated with each title have been converted from numeric to alphanumeric entities. The ICD rules for processing mortality data are generally similar but account for some changes observed in mortality statistics.

HOW ICD-10 COMPARES TO ICD-9

The intent of developing new revisions is to incorporate changes in medical knowledge. Compared with ICD-9, the ICD-10 has:

- expanded detail for many conditions (e.g., viral hepatitis has been expanded from ICD-9 code 070, a single 3-digit category, to ICD-10 codes B15-B19, five 3-digit categories)
- transferred conditions around the classification (e.g., hemorrhage has been moved from the circulatory chapter to the symptoms and signs chapter)
- used alphanumeric codes instead of numeric codes (e.g., code for diabetes mellitus was 250 in ICD-9 and is E10-E14 in ICD-10)
- modified coding rules (e.g., the "Old pneumonia, influenza, and maternal conditions" and "Error and accidents in medical care" coding rules have been eliminated)
- modified the tabulations lists (e.g., the US' ICD-10 113-cause list replaces the US' ICD-9 72-cause list)

COMPARABILITY ISSUE

In order to make valid comparisons of mortality by cause for events classified by different revisions of the ICD, comparability ratios were developed. Comparability ratios are computed by the National Center for Health Statistics from the results of dual coding of certificates according to the old and the new procedures. Taking the number of deaths classified to a given cause by the Tenth Revision and dividing the result by the number of deaths classified to that cause by the Eighth Revision derived the comparability ratios used with the Tenth Revision. Provisional comparability ratios for the United States as a whole, based on the Ninth and Tenth Revisions, have been developed for a limited number of causes published by the National Center for Health Statistics.

Assistance in using the ICD-10 can be obtained by contacting:

GRAMS WEIGHT CONVERSION CHART

500 grams or less = 1 lb. 1 oz. or less
501 - 1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001 - 1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501 - 2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001 - 2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501 - 3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,000 - 3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501 - 4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001 - 4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501 - 5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. - or more

SYMBOLS USED IN TABLES

Quantity Zero in frequency tables -
Both frequency and population base zero in rate or percent table -

FORMULA

Rates used in this report are calculated as follows:

Fetal Mortality Rate	= $\frac{\text{Annual number of fetal deaths}}{\text{Annual number of live births} + \text{Annual number of fetal deaths}}$	X 1,000
General Fertility Rate	= $\frac{\text{Annual number of live births}}{\text{Population of women 15-44 years of age}}$	X 1,000
Birth Rate of Unmarried Mothers	= $\frac{\text{Annual number of unmarried mothers}}{\text{Annual number of live births}}$	X 1,000
Infant Mortality Rate	= $\frac{\text{Annual number of infant deaths}}{\text{Annual number of live births}}$	X 1,000
Live Birth Rate (Crude)	= $\frac{\text{Annual number of live births}}{\text{Population of area}}$	X 1,000
Fertility rate	= $\frac{\text{Annual number of live births to mothers at the age of 15-44}}{\text{Female population at the age of 15-44}}$	X 1,000
Teen Pregnancy Rate	= $\frac{\text{Annual number of live births, abortions and fetal deaths occurred to teenage}}{\text{Population of the teenage}}$	X1,000
Neonatal Mortality Rate	= $\frac{\text{Annual number of neonatal deaths}}{\text{Annual number live births}}$	X 1,000
Postneonatal Mortality Rate	= $\frac{\text{Annual number of postneonatal deaths}}{\text{Annual number of live births}}$	X 1,000
Low Weight Birth Rate	= $\frac{\text{Annual number of live births weighing less than 2500 grams}}{\text{Annual number of live births}}$	X 1,000
