

# Age-Adjusted Average Mortality Rates\* and Ranks\*\* for Strokes Among All Races, 2010

\*Rates are per 100,000 people, age adjusted mortality data standardized to year 2000 Population.

A note of caution: counties with smaller populations may see substantial variation in mortality measures from year to year (and consequently in some of their ranks.) The three year moving average is an attempt to address this issue.

\*\* Numeric values in blue represent rankings by county for Stroke mortality for all races.
