What Is Cancer?

Cancer is not one disease, but a group of diseases. For example, lung cancer is a completely different disease than colorectal cancer. All cancers have one thing in common, they can grow and spread uncontrollably if not diagnosed at an early stage and properly treated.

Cancer is caused by many things, like smoking, poor diet, and/or family history. The greatest risk factor for any cancer is increasing age. The risk of getting cancer increases with age. The risk of developing cancer differs for men and women. In the United States, one out of two men and one out of three women will have cancer in his or her lifetime.

What Is Cancer Incidence?

Cancer *incidence* is a measure of how many *new cancer cases* occurred in a certain period of time. A cancer *incidence rate* tells how many cancers were diagnosed per 100,000 people in the population. (For example, a cancer incidence rate of 400 means that for every 100,000 people, 400 were diagnosed with cancer).

Incidence rates can be *age-adjusted*, meaning that the age structure of the population is taken into account when rates are calculated. Adjusting for age allows us to compare rates by removing differences in the age structure among different populations. Incidence rates shown below are age-adjusted to the 2000 US standard population.

What Is Cancer Mortality?

Cancer *mortality* is a measure of how many *cancer deaths* occurred in a certain period of time. A cancer *mortality rate* tells how many people died from cancer per 100,000 people in the population. (For example, a cancer mortality rate of 150 means that for every 100,000 people in the population, 150 died from cancer).

Cancer mortality rates can also be *age-adjusted*, taking into account the age structure of the population. Mortality rates shown below are age-adjusted to the 2000 US standard population.

Impact of Cancer: US, SC, and SC County

The American Cancer Society (ACS) estimates that 1,806,590 new cases of cancer will be diagnosed in the United States in 2020. This translates to 4,950 new diagnoses each day. Furthermore, an estimated 606,520 people in the United States are expected to die from cancer in 2020.

In South Carolina, ACS estimates 31,710 new cases of cancer will be diagnosed in 2020 or over 87 new cancer cases diagnosed each day, while an estimated 10,780 South Carolinians will die from cancer in 2020. The four most common cancers in SC are cancers of the lung, breast (female), prostate, and colon/rectum. The four leading cancer causes of death in SC are lung, colon/rectum, breast (female), and pancreas.

Tables 1 through 4 below show the number of new cancer cases and deaths for Berkeley County, including age-adjusted rates for cancers in the county and for the state of SC. The last column in each table shows how the county ranks in comparison to the other 45 SC counties. A rank of 1 means that a county has the highest rate of any county, while a rank of 46 means that a county has the lowest rate of any SC county. *At this time, the most recent cancer statistics for South Carolina and the United States are for new cases diagnosed in 2017. Deaths occurring in 2017 are also used.*

Table 1 shows 5-year cancer incidence data for Berkeley County and SC for all cancers by sex and race, including Berkeley County's rank in SC compared to all other SC counties.

Table 1. Cancer Incidence by Sex and Race, 2013-2017, Berkeley County and South Carolina*

	SC		Berkeley County	
	5-year rate	5-year rate	new cases*	SC rank
all	454	453	960	22
male	511	491	489	35
female	413	423	471	11
white	456	472	731	13
black	447	412	205	37

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 2 shows 5-year cancer mortality data for Berkeley County and SC for all cancers by sex and race, including Berkeley County's rank in SC compared to all other SC counties.

Table 2. Cancer Mortality by Sex and Race, 2013-2017, Berkeley County and South Carolina*

	SC		Berkeley County	
	5-year rate	5-year rate	lives lost*	SC rank
all	168	170	333	29
male	209	205	183	33
female	139	141	150	28
white	163	171	247	23
black	190	174	78	40

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 3 shows 5-year cancer incidence data for Berkeley County and SC for selected cancers, including Berkeley County's rank in SC compared to all other SC counties.

Table 3. Cancer Incidence for Selected Cancers, 2013-2017, Berkeley County and South Carolina*

cancer	SC		Berkeley County	
	5-year rate	5-year rate	new cases*	SC rank
breast (female)	130	124	140	29
prostate (male)	115	105	115	31
lung/bronchus	64	74	158	11
colon/rectum	38	37	75	36
pancreas	14	14	26	21

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 4 shows 5-year cancer mortality data for Berkeley County and SC for selected cancers, including Berkeley County's rank in SC compared to all other SC counties.

Table 4. Cancer Mortality for Selected Cancers, 2013-2017, Berkeley County and South Carolina*

cancer	SC		Berkeley County	
	5-year rate	5-year rate	lives lost*	SC rank
breast (female)	22	18	20	41
prostate (male)	22	20	15	31
lung/bronchus	45	54	109	10
colon/rectum	14	11	22	44
pancreas	11	11	22	26

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 5 shows the percentage of cancers diagnosed in early and late stages of disease in Berkeley County and SC. Cancers diagnosed in late stages lessen the potential for successful treatment and raise the risk of premature loss of life.

Table 5. All Cancers by Stage of Diagnosis, 2013-2017, Berkeley County and South Carolina*

	SC	Berkeley County
	Percent of all cancers	Percent of all cancers
Early Stage	48.8	51.6
Late Stage	40.7	39.2
Unknown Stage	10.5	9.1

*Percents (proportions) shown are (rounded) based on 5 years of data. Statistics include *in situ* cancers.
Source: SC Central Cancer Registry.

Breast Cancer in Berkeley County

Among women, breast cancer was the number 1 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 140 new female breast cancer cases diagnosed and 20 deaths from this disease.

Prostate Cancer in Berkeley County

Among men, prostate cancer was the number 1 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 115 new prostate cancer cases diagnosed and 15 deaths from this disease.

Lung Cancer in Berkeley County

Lung Cancer was the number 1 most commonly diagnosed cancer and the number 1 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 158 new lung cancer cases diagnosed and 109 deaths from this disease.

Colorectal Cancer in Berkeley County

Colorectal cancer was the number 4 most commonly diagnosed cancer and the number 3 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 75 new colorectal cancer cases diagnosed and 22 deaths from this disease.

Pancreatic Cancer in Berkeley County

Pancreatic cancer was the number 12 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual

average of 26 new pancreatic cancer cases diagnosed and 22 deaths from this disease.

Screening

Men and women should speak with their doctor about the pros and cons of screening and to determine their level of risk.

The SC Best Chance Network (BCN) is a federally funded program that provides breast and cervical cancer screening, follow-up and diagnosis for low-income, uninsured women age 30 – 64, screening thousands of women each year. For more information see:

<http://www.scdhec.gov/Health/DiseasesandConditions/Cancer/FreeCancerScreening/>

Notes: Data are subject to change as data sets are updated. Rates are per 100,000 and age-adjusted to the 2000 U.S. standard population. Statistics do not include *in situ* cancers, except for bladder. The following suppression rules may have been applied to the data in the text and tables above: counts of 1-4 are recorded as less than 5; counts of 5-9 are rounded to 10. Rates based on counts fewer than 16 are suppressed (~).
